

# गणित Mathematics

कक्षा / Class IX 2025-26

विद्यार्थी सहायक सामग्री Student Support Material

## संदेश

विद्यालयी शिक्षा में शैक्षिक उत्कृष्टता प्राप्त करना एवं नवाचार द्वारा उच्च - नवीन मानक स्थापित करना केन्द्रीय विद्यालय संगठन की नियमित कार्यप्रणाली का अविभाज्य अंग है। राष्ट्रीय शिक्षा नीति 2020 एवं पी. एम. श्री विद्यालयों के निर्देशों का पालन करते हुए गतिविधि आधारित पठन-पाठन, अनुभवजन्य शिक्षण एवं कौशल विकास को समाहित कर, अपने विद्यालयों को हमने ज्ञान एवं खोज की अद्भुत प्रयोगशाला बना दिया है। माध्यमिक स्तर तक पहुँच कर हमारे विद्यार्थी सैद्धांतिक समझ के साथ-साथ, रचनात्मक, विश्लेषणात्मक एवं आलोचनात्मक चिंतन भी विकसित कर लेते हैं। यही कारण है कि वह बोर्ड कक्षाओं के दौरान विभिन्न प्रकार के मूल्यांकनों के लिए सहजता से तैयार रहते हैं। उनकी इस यात्रा में हमारा सतत योगदान एवं सहयोग आवश्यक है - केन्द्रीय विद्यालय संगठन के पांचों आंचलिक शिक्षा एवं प्रशिक्षण संस्थान द्वारा संकलित यह विद्यार्थी सहायक- सामग्री इसी दिशा में एक आवश्यक कदम है । यह सहायक सामाग्री कक्षा 9 से 12 के विद्यार्थियों के लिए सभी महत्वपूर्ण विषयों पर तैयार की गयी है। केन्द्रीय विद्यालय संगठन की विद्यार्थी सहायक- सामग्री अपनी गुणवत्ता एवं परीक्षा संबंधी सामग्री संकलन की विशेषज्ञता के लिए जानी जाती है और शिक्षा से जुड़े विभिन्न मंचों पर इसकी सराहना होती रही है। मुझे विश्वास है कि यह सहायक सामग्री विद्यार्थियों की सहयोगी बनकर निरंतर मार्गदर्शन करते हुए उन्हें सफलता के लक्ष्य तक पहुँचाएगी। शुभाकांक्षा सहित ।

निधि पांडे आयुक्त , केन्द्रीय विद्यालय संगठन

#### CHAPTER – 1 NUMBER SYSTEMS

#### GIST/SUMMARY OF THE LESSON:

The chapter introduces different types of numbers and extends the concept of the number system to include irrational numbers and the real number line. Students learn how to represent numbers on the number line and understand operations such as rationalization and laws of exponents for real numbers.

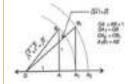

#### **DEFINITIONS AND FORMULAE:**

- Natural Numbers (N): Counting numbers starting from 1.  $N = \{1, 2, 3, 4, ...\}$
- Whole Numbers (W): Natural numbers including 0.  $W = \{0, 1, 2, 3, ...\}$
- Integers (Z): All positive and negative whole numbers including 0.  $Z = \{..., -3, -2, -1, 0, 1, 2, 3, ...\}$
- Rational Numbers (Q): Numbers that can be expressed in the form p/q, where  $p, q \in Z$  and  $q \neq 0$ . E.g., 1/2, -3/4, 5
- Irrational Numbers: Numbers that cannot be expressed as p/q. Decimal expansion is non-terminating and non-repeating. E.g.,  $\sqrt{2}$ ,  $\sqrt{3}$ ,  $\pi$
- Real Numbers (R): All rational and irrational numbers together form the real numbers. R = Q ∪ Irrational Numbers
- Terminating Decimal: A decimal that ends after a certain number of digits. E.g., 0.25 = 1/4
- Non-Terminating Recurring Decimal: Decimal expansion that goes on forever but has a repeating pattern. E.g., 0.666... = 2/3
- Non-Terminating Non-Recurring Decimal: Infinite decimals with no repeating pattern; they are irrational. E.g.,  $\pi = 3.141592...$

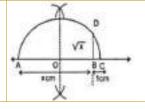

#### KEY CONCEPTS AND FORMULAE

- 1 Representation of Real Numbers on the Number Line
  - Rational numbers can be easily plotted using the number line. Irrational numbers like  $\sqrt{2}$ ,  $\sqrt{3}$  can be represented using the Pythagoras Theorem:

To locate  $\sqrt{2}$ : Draw a right triangle with legs of 1 unit each. Hypotenuse =  $\sqrt{2}$ . For every positive real number x,  $\sqrt{x}$  can be represented by a point on the number line by using the following steps:

- (1) Obtain the positive real number x (say)
- (ii) Draw a line and mark a point A on it.
- (iii) Mark a point B on the line such that AB = x units.
- (iv) From point B mark a distance of 1 unit and mark the new point as C.
- (v) Find the midpoint of AC and mark the point as O.

	(vi) Draw a circle with centre O and radius OC.					
	(vii) Draw a line perpendicular to AC passing through B and intersecting the semi- circle at D. Length BD is equal to $\sqrt{x}$ .					
2	OPERATIONS WITH REAL NUMBERS					
		rs. Real numbers are closed under addition, subtraction, and				
		n R-S, R+S, R×S and R/S are irrational numbers, $R\neq 0$ , $S\neq 0$				
3	LAWS OF EXPONENTS FOR REAL NUMBERS					
	Law	Formula				
	PRODUCT OF POWERS	$a^m \times a^n = a^{m+n}$				
	QUOTIENT OF POWERS	$a^m \div a^n = a^{m-n}$				
	Power Of A Power	$(a^m)^n = a^{m \times n}$				
	POWER OF A PRODUCT	$(ab)^m = a^m \times b^m$				
	POWER OF A QUOTIENT	$(a/b)^m = a^m/b^m$				
	ZERO EXPONENT	$a^0 = 1 (a \neq 1)$				
	NEGATIVE EXPONENT	$a^{0} = 1 (a \neq 1)$ $a^{-1} = \frac{1}{a}$				
	MULTIPLE CHOICE QUESTIONS (01 MARK QUESTION)	DNS)				
1	What is the simplest form of the decimal	Solution:(a) Let $x = 0.272727$				
	0.272727?	100x = 27.272727				
	(a) $\frac{3}{11}$ (b) $\frac{27}{98}$ (c) $\frac{27}{100}$ (d) $\frac{3}{10}$	Subtracting, $99x = 27$				
	11 1098 17100 10	$x = \frac{27}{99} = \frac{3}{11}$ Answer: A) $\frac{3}{11}$				
2	Which of the fellowine is an impaired and appearance	SOLUTION:(c) $\sqrt{2} + \sqrt{3}$ is an irrational number since the sum				
2	Which of the following is an irrational number? (a) $\sqrt{4}$ (b) $\sqrt{9}$ (c) $\sqrt{2} + \sqrt{3}$ (d) $\sqrt{4/9}$					
2	` '	of two irrational numbers is irrational				
3	The decimal representation of 1/17 is:	SOLUTION: (b) $1/17 = 0.0588235294117647$ (non-				
	(a) Terminating (b) Non-terminating and	terminating and recurring)				
	recurring (C)Non-terminating and non-recurring (d)None of the

1		$\sqrt{5}+\sqrt{3}$ $\sqrt{5}+\sqrt{3}$ $5+3+2\sqrt{15}$				
<b>T</b>	What is the value of $\frac{\sqrt{5+\sqrt{3}}}{\sqrt{5}-\sqrt{3}}$ ?	<b>SOLUTION:</b> (a) $\frac{\sqrt{5}+\sqrt{3}}{\sqrt{5}-\sqrt{3}} \times \frac{\sqrt{5}+\sqrt{3}}{\sqrt{5}+\sqrt{3}} = \frac{5+3+2\sqrt{15}}{5-3} = 4+\sqrt{15}$				
	(a) $4 + \sqrt{15}$ (b) $4 - \sqrt{15}$ (c) $(\sqrt{5} + \sqrt{3})/2$					
	(d) $(\sqrt{5} - \sqrt{3})/2$					
5	Which of the following is a rational number?	<b>SOLUTION:</b> (b) $\sqrt{4} + \sqrt{9} = 2 + 3 = 5$ (rational number)				
	(a) $\sqrt{2} + \sqrt{3}$ (b) $\sqrt{4} + \sqrt{9}$ (c) $\sqrt{2} \times \sqrt{3}$ (d)					
	$\sqrt{2}/\sqrt{3}$					
6	The simplest form of the expression $\frac{\sqrt{2}+1}{\sqrt{2}-1}$ is:	<b>SOLUTION:</b> (a) $\frac{\sqrt{2}+1}{\sqrt{2}} \times \frac{\sqrt{2}+1}{\sqrt{2}} = \frac{2+1+2\sqrt{2}}{2}$				
	(a) $3 + 2\sqrt{2}$ (b) $3 - 2\sqrt{2}$ (c) $\sqrt{2} + 1$ (d) $\sqrt{2} - 1$					
	1	$=$ 3 + 2 $\sqrt{2}$				
7	The value of $(\sqrt{3} + \sqrt{2})^2$ is:	<b>SOLUTION:</b> (a) $(\sqrt{3} + \sqrt{2})^2 = 3 + 2 + 2\sqrt{6}$				
		$= 5 + 2\sqrt{6}$				
	$2\sqrt{6}$					
8	What is the simplest form of the expression (2 +	<b>SOLUTION:</b> (a) $(2 + \sqrt{3})/(2 - \sqrt{3}) \times (2 + \sqrt{3})/(2 + \sqrt{3}) = (4 + 3)$				
	$\sqrt{3}$ )/(2 - $\sqrt{3}$ )?	$(4 + 4\sqrt{3})/(4 - 3) = 7 + 4\sqrt{3}$				
	(a) $7 + 4\sqrt{3}$ (b) $7 - 4\sqrt{3}$ (c) $2 + \sqrt{3}$ (d) $2 -$					
	$\sqrt{3}$					
9	Two irrational numbers are added to get a rational	SOLUTION: C. The numbers are additive inverses.				
	number. Which of the following must be true?					
	(a)This is impossible					

(a)This is impossible.

	(b)The two numbers must be equal.	
	(c) The numbers are additive inverses.	
	(d)One number is a perfect square	
10	What is the $p/q$ form of 0.090909?	SOLUTION: $(b)^{\frac{1}{11}}$
	(a) $\frac{9}{10}$ (b) $\frac{1}{11}$ (c) $\frac{9}{90}$ (d) $\frac{10}{11}$	
	ASSERTION - REASON BASED QUESTIONS	
	In the following questions, a statement of Assertion (A	A) is followed by a statement of Reason(R).
	Pick the correct option:	
	(a) Both Assertion (A) and Reason(R) are true and Re	
		ason(R) is NOT the correct explanation of Assertion (A).
	(C) Assertion (A) is true but Reason(R) is false.	
1	(d) Assertion (A) is false but Reason(R) is true.	
1		SOLUTION:(d) Not every rational number has a terminating
		decimal representation (e.g., $1/3 = 0.333$ ). The Reason is
	form p/q, where p and q are integers and $q \neq 0$ .	true but does not explain the Assertion correctly.
2	Assertion: $\sqrt{2}$ is an irrational number.	SOLUTION:(a)Both Assertion and Reason are true. The
	Reason: The decimal representation of $\sqrt{2}$ is non-	Reason correctly explains why $\sqrt{2}$ is irrational.
	terminating and non-recurring.	acoused controlly chaptering willy the interested.
3		SOLUTION:(a)Both Assertion and Reason are true, and
	Reason: Integers can be expressed in the form $p/q$ ,	Reason is the correct explanation of Assertion.
	where p is the integer and $q = 1$ .	
4	Assertion: The sum of two irrational numbers is	SOLUTION:(d)The Assertion is false because the sum of two
	always irrational.	irrational numbers can be rational (e.g., $\sqrt{2} + (-\sqrt{2}) = 0$ ).
	Reason: The sum of $\sqrt{2}$ and $-\sqrt{2}$ is 0, which is rational.	The Reason is true and serves as a counter example.
5		SOLUTION:(a)Both Assertion and Reason are true. The
5		Reason correctly explains why the decimal representation
	Reason: $1/4 = 0.25$ , which has a finite number of	of 1/4 is terminating.
	digits after the decimal point.	or 1/4 is commuting.
6	Assertion: Every rational number can be expressed	SOLUTION: (a) Both assertion and reason are true, and the
	as a terminating or repeating decimal.	reason is the correct explanation.
	Reason: Rational numbers have a finite or repeating	
	decimal expansion due to their fractional form.	
7	· · · · · · · · · · · · · · · · · · ·	SOLUTION: (a)Both assertion and reason are true, and the
		reason is the correct explanation.
	Reason: $\sqrt{2}$ is an irrational number, and irrational numbers have non-terminating and non-repeating	
	decimal expansions.	
8		SOLUTION: (c) Assertion (A) is true but Reason(R) is false
_	may not be irrational.	2.2
	Reason: The sum of two non-terminating and non-	
	Repeating decimal expansions is always non-	
	Terminating and non-repeating.	
9		SOLUTION: (a)Both assertion and reason are true, and the
		reason is the correct explanation.
10	where $q = 1$ .	Correspond (a)D (1)
10		SOLUTION: (a)Both assertion and reason are true, and the
	manonai numuti.	reason is the correct explanation.

	Reason: The decimal expansion is non-terminating
	and non-repeating.  VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS)
1	If $2^{x+1} = 4^{x-1}$ , find the value of x.
	Solution: $2^{x+1} = (2^2)^{x-1}$ ; $2^{x+1} = 2^{2x-2}$ ; $x + 1 = 2x - 2$ ; $x = 3$
2	If $a = 2^{\frac{1}{3}}$ and $b = 2^{\frac{2}{3}}$ , find the value of $a^3b^3$ .
	Solution: $a^3b^3 = (2^{\frac{1}{3}})^3 \times (2^{\frac{2}{3}})^3 = 2 \times 2^2 = 2^3 = 8$
3	Rationalise the denominator: $(\sqrt{2} + 1) / (\sqrt{2} - 1)$ .
J	Solution: $(\sqrt{2} + 1) / (\sqrt{2} - 1) \times (\sqrt{2} + 1) / (\sqrt{2} + 1) = (2 + 1 + 2\sqrt{2}) / (2 - 1) = 3 + 2\sqrt{2}$
4	Simplify: $(\sqrt{5} + \sqrt{3}) / (\sqrt{5} - \sqrt{3}) - (\sqrt{5} - \sqrt{3}) / (\sqrt{5} + \sqrt{3})$ .
	Solution: $(\sqrt{5} + \sqrt{3}) / (\sqrt{5} - \sqrt{3}) \times (\sqrt{5} + \sqrt{3}) / (\sqrt{5} + \sqrt{3}) = (5 + 3 + 2\sqrt{15}) / (5 - 3) = 4 + \sqrt{15}$ $(\sqrt{5} - \sqrt{3}) / (\sqrt{5} + \sqrt{3}) \times (\sqrt{5} - \sqrt{3}) / (\sqrt{5} - \sqrt{3}) = (5 + 3 - 2\sqrt{15}) / (5 - 3) = 4 - \sqrt{15}$
5	Subtracting both expressions, $4 + \sqrt{15} - (4 - \sqrt{15}) = 2\sqrt{15}$
5	Convert 0.456456 to p/q form <b>SOLUTION</b> : Let $x = 0.456456$ ; Multiplying both sides by 1000, we get: $1000x = 456.456456$
	Subtracting the original equation from this, we get: $999x = 456$ ; $x = 456/999$ ; $x = 152/333$
	So, 0.456456 = 152/333
6	Write 4 irrational numbers between 5/8 and ½.
	SOLUTION: To find four irrational numbers between 5/8 and 1/2, we can start by converting these fractions to
	decimals. $5/8 = 0.625$ ; $1/2 = 0.5$ ; Now, we need to find four irrational numbers between 0.5 and 0.625. Here are four examples: $0.54321$ , $0.56789$ , $0.59123$ , $0.61234$ (a non-repeating, non-terminating decimal)
7	What is the value of $256^{0.16} \times 256^{0.09}$ ?
,	SOLUTION: $256^{0.16} \times 256^{0.09} = 256^{0.16+0.09} = 256^{0.25} = 256^{\frac{25}{100}} = 256^{\frac{1}{4}} = (4^4)^{\frac{1}{4}} = 4$
8	Find the value of $(\sqrt{6} + \sqrt{5}) / (\sqrt{6} - \sqrt{5}) - (\sqrt{6} - \sqrt{5}) / (\sqrt{6} + \sqrt{5})$ .
o	SOLUTION: $(\sqrt{6} + \sqrt{5}) / (\sqrt{6} - \sqrt{5}) \times (\sqrt{6} + \sqrt{5}) / (\sqrt{6} + \sqrt{5}) = (6 + 5 + 2\sqrt{30}) / (6 - 5) = 11 + 2\sqrt{30}$
	$(\sqrt{6} - \sqrt{5}) / (\sqrt{6} + \sqrt{5}) \times (\sqrt{6} - \sqrt{5}) / (\sqrt{6} - \sqrt{5}) = (6 + 5 - 2\sqrt{30}) / (6 - 5) = 11 - 2\sqrt{30}$
	Subtracting both expressions, $11 + 2\sqrt{30} - (11 - 2\sqrt{30}) = 4\sqrt{30}$
9	Simplify $\left(\frac{243}{32}\right)^{-\frac{4}{5}}$
	\ 32 /
	SOLUTION: $\left(\frac{3^5}{2^5}\right)^{\frac{-4}{5}} = \left(\frac{3}{2}\right)^{-4} = \left(\frac{2}{3}\right)^4 = \frac{16}{81}$
	Find two irrational numbers between $\sqrt{2}$ and $\sqrt{3}$ .
	Solution: $\sqrt{2} = 1.414$ and $\sqrt{3} = 1.732$
	two irrational numbers between them are $\sqrt{2.5}$ and 1.6121121112
	SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)
1	If $x = \frac{\sqrt{3} + \sqrt{2}}{\sqrt{3} - \sqrt{2}}$ and $y = \frac{\sqrt{3} - \sqrt{2}}{\sqrt{3} + \sqrt{2}}$ , find the value of $x^2 + y^2$ .
	SOLUTION: $x = \frac{\sqrt{3} + \sqrt{2}}{\sqrt{3} + \sqrt{2}} \times \frac{\sqrt{3} + \sqrt{2}}{\sqrt{3} + \sqrt{2}} = 5 + 2\sqrt{6}$ ; $y = \frac{\sqrt{3} - \sqrt{2}}{\sqrt{3} + \sqrt{2}} \times \frac{\sqrt{3} - \sqrt{2}}{\sqrt{3} - \sqrt{2}} = 5 - 2\sqrt{6}$ ; $x^2 + y^2 = (5 + 2\sqrt{6})^2 + (5 - 2\sqrt{6})^2$
	= 2(25 + 24) = 98
2	If $x = 2 + \sqrt{3}$ . Find the value of $x^2 - 4x + 1$
	<b>SOLUTION:</b> Step 1: Calculate $x^2$ ; $x^2 = (2 + \sqrt{3})^2 = 4 + 4\sqrt{3} + 3 = 7 + 4\sqrt{3}$
	Step 2: Calculate $4x$ ; $4x = 4(2 + \sqrt{3}) = 8 + 4\sqrt{3}$ ; Step 3: Calculate $x^2 - 4x + 1$
	$x^2 - 4x + 1 = (7 + 4\sqrt{3}) - (8 + 4\sqrt{3}) + 1 = 7 + 4\sqrt{3} - 8 - 4\sqrt{3} + 1 = 0$ So, the value of $x^2 - 4x + 1$ is 0.
3	3. If $x = (\sqrt{2} + 1) / (\sqrt{2} - 1)$ , find the value of $x^2 + 1/x^2$ .
J	SOLUTION: $\mathbf{x} = (\sqrt{2} + 1) / (\sqrt{2} - 1)$ , find the value of $\mathbf{x}^2 + 1/\mathbf{x}^2$ .
	$1/x = (\sqrt{2} - 1) / (\sqrt{2} + 1) \times (\sqrt{2} - 1) / (\sqrt{2} - 1) = (2 + 1 - 2\sqrt{2}) / (2 - 1) = 3 - 2\sqrt{2}$
	$x^2 + 1/x^2 = (3 + 2\sqrt{2})^2 + (3 - 2\sqrt{2})^2$ ; $2(9 + 8) = 34$

Find 5 rational numbers between <sup>3</sup>/<sub>4</sub> and <sup>4</sup>/<sub>5</sub>

**SOLUTION:** Step 1: Convert both fractions to equivalent fractions with a

common denominator, The least common multiple (LCM) of 4 and 5 is 20.;

 $\frac{3}{4} = \frac{15}{20}$ ;  $\frac{4}{5} = \frac{16}{20}$ ;  $\frac{3}{4} = \frac{15}{20} \times \frac{6}{6} = \frac{90}{120}$ 

 $= 16/20 \times 6/6 = 96/120$ , 91/120, 92/120, 93/120, 94/120, 95/120

You can simplify them if needed: 91/120, 23/30, 93/120, 47/60, 19/24

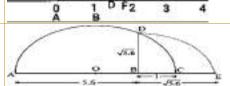

Represent  $\sqrt{3}$  on the real number line.

**SOLUTION:** 

Represent  $\sqrt{5.6}$  on real number line.

SOLUTION:

If  $1617 = 3^a \times 7^b \times 11^c$ . Find the value of a,b and c.

**SOLUTION:** prime factorisation of  $1617 = 3^1 \times 7^2 \times 11^1$  on comparing, a=1, b=2, c=1

If  $a = 2 + \sqrt{3}$  and  $b = 2 - \sqrt{3}$ , find  $a^2 + b^2$ .

Solution:  $(2 + \sqrt{3})^2 + (2 - \sqrt{3})^2 = 4 + 3 + 4 + 3 = 14$ 

Visualise 3.765 on the number line using successive magnification.

**SOLUTION:** 3.765 can be visualised as in the following steps

First, we draw a number line and mark points on it after that we will divide the number line between points 3 and 4. And then we will divide the points between 3.7 and 3.8 as the number is between both of them.

10 Express the repeating decimal 2.234234... in p/q form.

**SOLUTION**: Let x = 2.234234...(1); Multiply both sides by 1000 (since the repeating block has 3 digits):

1000x = 2234.234234... (2); Subtract (1) from (2):; 999x = 2232; x = 2232 / 999

x = 744 / 333; x = 248 / 111; So, the p/q form of 2.234234... is 248/111

Simplify:  $\left(\frac{x^{a}}{x^{-b}}\right)^{a-b} \times \left(\frac{x^{b}}{x^{-c}}\right)^{b-c} \times \left(\frac{x^{c}}{x^{-a}}\right)^{c-a}$ SOLUTION:  $(x^{a+b})^{a-b} \times (x^{b+c})^{b-c} \times (x^{c+a})^{c-a} = x^{a^{2}-b^{2}} \times x^{b^{2}-c^{2}} \times x^{c^{2}-a^{2}} = 1$ 

Find the value of a and b in the following:  $\frac{7+\sqrt{5}}{7-\sqrt{5}} - \frac{7-\sqrt{5}}{7+\sqrt{5}} = a + \frac{7}{11}\sqrt{5}b$ 

SOLUTION:  $\frac{54+14\sqrt{5}}{44} - (\frac{54+14\sqrt{5}}{44}) = a + \frac{7}{11}\sqrt{5}b \rightarrow a = 0 \text{ and } b = 1.$ Prove that:  $\frac{1}{\sqrt{2}+\sqrt{3}} + \frac{1}{\sqrt{3}+\sqrt{4}} + \frac{1}{\sqrt{4}+\sqrt{5}} + \frac{1}{\sqrt{5}+\sqrt{6}} + \frac{1}{\sqrt{6}+\sqrt{7}} = 1$ 

**SOLUTION:** Prove using rationalisation

Express  $0.6 + 0.\overline{2} + 0.4\overline{2}$  in the form  $\frac{p}{q}$  where p and q are integers and  $q \neq 0$ .

SOLUTION:  $\frac{167}{99}$ 

Find the value of  $\frac{4}{(216)^{\frac{-2}{3}}} + \frac{1}{(256)^{\frac{-3}{4}}} + \frac{2}{(243)^{\frac{-1}{5}}}$ 

COLUTION:	4	1 1	2	_ 4	1	. 2	
SOLUTION.	$\frac{-2}{(6^3)^3}$	$\frac{1}{(4^4)^{\frac{-3}{4}}}$	$(3^5)^{\frac{-1}{5}}$	$-{6^{-2}}$	4-3	3-1	<b>–</b> 214

#### CASE BASED QUESTIONS (04 MARKS QUESTIONS)

#### Exponents in Science

In a science exhibition, the value of the speed of light is given as  $3 \times 10^8$  m/s and the size of a virus is approximately  $2 \times 10^{-9}$ m. Students are taught to use exponents to simplify and compare such numbers.

- (1) Express the product of speed of light and time taken as  $3 \times 10^8 \times 2 \times 10^{-9}$ Simplify using laws of exponents.
- (2) Find  $(2 \times 10^{-9})^2$  using the laws of exponents.
- (3) Evaluate  $\frac{2^3}{2^5}$  and write your answer in exponent form.
- (4) What is the value of  $(a^m)^n$  when a = 3, m = 2, and n = 3?

#### SOLUTION:

(1) 
$$3 \times 10^8 \times 2 \times 10^{-9} = 6 \times 10^{-1}$$
; (2)  $(2 \times 10^{-9})^2 = 2^2 \times (10^{-9})^2 = 4 \times 10^{-18}$ ; (3)  $\frac{2^3}{2^5} = 2^{3-5} = 2^{-2} = (\frac{1}{2})^2 = \frac{1}{4}$ ; (4)  $(a^m)^n = (3^2)^3 = 3^6 = 729$ 

## Case Study 2: Rocket Launch Timing

A team of scientists are working on calculating the exact timing of a rocket launch. The rocket's countdown timer works on powers of 10. The current time displayed is  $3 \times 10^4$  seconds before launch.

#### **Questions:**

- (1) Express  $3 \times 10^4$  in standard numerical form.
- (2) If the countdown continues and reduces by a factor of  $10^2$ , what is the new time remaining?
- (3) Use the laws of exponents to simplify:  $(2 \times 10^3) \times (4 \times 10^2)$
- (4) What rule of exponents is applied in the expression  $(a^m)^n = a^{mn}$ . Apply for a=2, m=3, n=2

#### **SOLUTIONS:**

(1) 
$$3 \times 10^4 = 30000$$
;

(2) new time= 
$$\frac{3 \times 10^4}{10^2} = 300$$
;

(3) 
$$(2 \times 10^3) \times (4 \times 10^2) = 8 \times 10^5$$
  
(4)  $(a^m)^n = a^{mn} = 2^{3 \times 2} = 2^6 = 64$ 

$$(4) (a^m)^n = a^{mn} = 2^{3 \times 2} = 2^6 = 64$$

#### Case Study 3: Number Game

Two friends were given a project to tag the numbers given to them as R, IR which are short form for rational number, irrational number respectively. The numbers are: 1.707007000...., 1/5,  $\sqrt{49}$ ,  $\sqrt{2}$  and  $\sqrt{35.020020002}$ ....,

$$\frac{3}{4}$$
,  $\sqrt{7}$ ,  $\frac{\sqrt{54}}{\sqrt{6}}$ ,  $\frac{1}{2\sqrt{3}-\sqrt{11}}$ 

#### **Ouestions:**

- (1) Identify rational and irrational numbers from the given numbers.
- (2) Find two rational numbers between  $\sqrt{2}$  and  $\sqrt{3}$ .
- (3) Find two irrational numbers between  $\sqrt{2}$  and  $\sqrt{3}$ .
- (4) Rationalise  $\frac{1}{2\sqrt{3}-\sqrt{11}}$

#### SOLUTIONS:

- (1) Rational numbers:  $\frac{1}{5}$ ,  $\sqrt{49} = 7$  (since  $\sqrt{49}$  is a perfect square),  $\frac{3}{4}$ , 7, 546, 123 11 = 112 Irrational numbers: 1.707007000... (non-terminating and non-repeating),  $\sqrt{2}$ ,  $\sqrt{3}$ ,
- 5.020020002... (non-terminating and non-repeating)

(2) 
$$\sqrt{2} \approx 1.414$$
;  $\sqrt{3} \approx 1.732$ 

Two rational numbers between  $\sqrt{2}$  and  $\sqrt{3}$ : 1.5 and 1.6

(3) Two irrational numbers between  $\sqrt{2}$  and  $\sqrt{3}$ :  $\sqrt{2.1}$  and  $\sqrt{2.5}$ 

```
(4) \frac{1}{2\sqrt{3} - \sqrt{11}} = \frac{2\sqrt{3} + \sqrt{11}}{(2\sqrt{3})^2 - (\sqrt{11})^2} = \frac{2\sqrt{3} + \sqrt{11}}{12 - 11} = 2\sqrt{3} + \sqrt{11}
                                                                       HOTS
If a = 2 + \sqrt{3} + \sqrt{5} and b = 2 + \sqrt{3} - \sqrt{5}, find the value of (a^2 + b^2) / (a + b)
SOLUTION: a^2 = (2 + \sqrt{3} + \sqrt{5})^2 = 4 + 4\sqrt{3} + 4\sqrt{5} + 3 + 2\sqrt{15} + 5 = 12 + 4\sqrt{3} + 4\sqrt{5} + 2\sqrt{15}.
b^2 = (2 + \sqrt{3} - \sqrt{5})^2 = 4 + 4\sqrt{3} - 4\sqrt{5} + 3 - 2\sqrt{15} + 5 = 12 + 4\sqrt{3} - 4\sqrt{5} - 2\sqrt{15}.
a^2 + b^2 = (12 + 4\sqrt{3} + 4\sqrt{5} + 2\sqrt{15}) + (12 + 4\sqrt{3} - 4\sqrt{5} - 2\sqrt{15}) = 24 + 8\sqrt{3}.
a + b = (2 + \sqrt{3} + \sqrt{5}) + (2 + \sqrt{3} - \sqrt{5}) = 4 + 2\sqrt{3}.
Calculate (a^2 + b^2) / (a + b); (a^2 + b^2) / (a + b) = (24 + 8\sqrt{3}) / (4 + 2\sqrt{3}).
Let's simplify by dividing numerator and denominator by 2: (12 + 4\sqrt{3}) / (2 + \sqrt{3}).
 Multiply by the conjugate ((12 + 4\sqrt{3})(2 - \sqrt{3})) / ((2 + \sqrt{3})(2 - \sqrt{3})) = (24 - 12\sqrt{3} + 8\sqrt{3} - 12) / (4 - 3)
= (12 - 4\sqrt{3}) / 1 = 12 - 4\sqrt{3}. The final answer is: 12 - 4\sqrt{3}.
Prove that \sqrt{(11+2\sqrt{30})} - \sqrt{(7+2\sqrt{10})} = \sqrt{2}.
SOLUTION: \sqrt{(11+2\sqrt{30})} = \sqrt{(6+5+2\sqrt{30})} = \sqrt{6} + \sqrt{5}.
\sqrt{(7+2\sqrt{10})} = \sqrt{(5+2+2\sqrt{10})} = \sqrt{5} + \sqrt{2}.
(\sqrt{6} + \sqrt{5}) - (\sqrt{5} + \sqrt{2}) = \sqrt{6} - \sqrt{2}.
If x = (\sqrt{(a+2)} + \sqrt{(a-2)}) / (\sqrt{(a+2)} - \sqrt{(a-2)}), find the value of x^2 - ax + 1.
SOLUTION: x = (\sqrt{(a+2)} + \sqrt{(a-2)}) / (\sqrt{(a+2)} - \sqrt{(a-2)}) = (a + \sqrt{(a^2-4)}) / 2.
Given the form of x, let's directly evaluate x^2 - ax + 1 = ((a + \sqrt{(a^2 - 4))} / 2)^2 - a((a + \sqrt{(a^2 - 4))} / 2) + 1.
x^2 - ax + 1 = (a^2 + 2a\sqrt{a^2 - 4} + a^2 - 4) / 4 - (a^2 + a\sqrt{a^2 - 4}) / 2 + 1.
This simplifies to x^2 - ax + 1 = 0 after combining like terms and simplifying
The final answer is: 0
If x = (\sqrt{3} + \sqrt{2}) / (\sqrt{3} - \sqrt{2}) and y = (\sqrt{3} - \sqrt{2}) / (\sqrt{3} + \sqrt{2}), find the value of x^4 + y^4.
SOLUTION: x = (\sqrt{3} + \sqrt{2}) / (\sqrt{3} - \sqrt{2}) = 5 + 2\sqrt{6}, y = (\sqrt{3} - \sqrt{2}) / (\sqrt{3} + \sqrt{2}) = 5 - 2\sqrt{6}.
x^2 = (5 + 2\sqrt{6})^2 = 49 + 20\sqrt{6}, y^2 = (5 - 2\sqrt{6})^2 = 49 - 20\sqrt{6}.
x^4 + y^4 = (x^2)^2 + (y^2)^2 = (49 + 20\sqrt{6})^2 + (49 - 20\sqrt{6})^2 = 2(49^2 + (20\sqrt{6})^2) = 2(2401 + 2400) = 2 * 4801 = 9602.
The final answer is: 9602
If x = (\sqrt{(a+b)} + \sqrt{(a-b)}) / (\sqrt{(a+b)} - \sqrt{(a-b)}), find the value of x^2 - 2ax + b^2.
SOLUTION: x = (\sqrt{(a+b)} + \sqrt{(a-b)}) / (\sqrt{(a+b)} - \sqrt{(a-b)}) = (a + \sqrt{(a^2 - b^2)}) / b.
Given x = (a + \sqrt{a^2 - b^2}) / b, let's directly evaluate x^2 - 2ax + b^2.
The final answer is: 0
                                                                    EXERCISE
                                                     MULTIPLE CHOICE QUESTIONS
Express 1.1666... in p/q form:
A) 116/99

                                                           C) 0.714287...
                                                                                        D) 0.714288...
                                               ASSERTION AND REASONING QUESTIONS
DIRECTION: In the following questions, a statement of assertion (A) is followed by a statement of reason (R).
Mark the correct choice as:
A). Both assertion(A) and reason(R) are true and reason (R) is the correct explanation of assertion (A).
B). Both assertion (A) and reason (R) are true but reason (R) is not the correct explanation of assertion (A).
C) .Assertion (A) is true but reason (R) is false.
D). Assertion (A) is false but reason (R) is true.
```

- Assertion: Rational number lying between two rational numbers x and y is (x+y)/2.

  Reason: There is one rational number lying between any two rational numbers.

  Assertion: The rationalizing factor of 3+2√5 is 3-2√5.
- Assertion: The rationalizing factor of  $3+2\sqrt{5}$  is  $3-2\sqrt{5}$ . Reason: If the product of two irrational numbers is rational then each one is called the rationalising factor of the other.
- Assertion: Sum of two irrational numbers  $2+\sqrt{3}$  and  $4+\sqrt{3}$  is an irrational number.
- Reason: Sum of two irrational numbers is always an irrational number.
- Assertion: 0.329 is a terminating decimal.

  Reason: A decimal in which a digit or a set of digits is repeated periodically, is called a
- repeating, or a recurring, decimal.

  5
  - Assertion:  $13^5 \times 13^2 = 13^{10}$

Reason: If a > 0 be a real number and p and q be rational numbers. Then  $a^p \times a^q = a^{p+q}$

- Show that  $0.142857142857... = \frac{1}{7}$

#### CASE BASED TYPE QUESTIONS

- Mr. Roy, a Mathematics teacher explained some key points of unit 1 of class IX to his students. Some are given here. There are infinite rational numbers between any two rational numbers. Rationalisation of a denominator means to change the irrational denominator to rational form. A number is irrational if its decimal form is non-terminating non-recurring. On the basis of these key points, he asked the following questions to class. Can you help the class to solve these questions.
  - i) What is the reciprocal of 4  $\sqrt{15}$  with rational denominator? (1)
  - ii)Is 2.201200120001...... a rational number? Give reasons. (1)
  - iii) A vehicle started from point A with speed as a irrational number  $50\sqrt{2}$  km/hr to reach point B. Distance between points A and B is given by a rational number 350km. Tell whether the time will be given by a rational number or irrational number. Given reasons.

Two girls were playing with numbers to test each other's concept by asking each other riddles with numbers. Rohini says "A number x when raised to the power 5 of its 5th root, multiplied to its 5th root and the resultant is again multiplied to its power raised to then the result is 25." Mohini says "A number y is raised to the power  $\frac{-4}{5}$  and then the new number's 5th root is raised to the power  $\frac{-5}{4}$  and the resultant is raised to the power 5. The result comes out to be 5" Based on the above information answer the following questions: (i) What can be the possible solutions of Rohini's riddle? (2) (ii) What is the algebraic equation of Mohini's riddle? (1) (iii) Is x = y if both x and y are natural numbers? (1) Vasu represents  $\sqrt{4.5}$  on the number line PW. The length of TS = 1 unit. His representation is shown below. (i) Which letter represents 0 of the number line? (1) (ii) What is the length of ST? (1) (iii) Between which two points does 5.2 lie on this number line? (2) **ANSWERS** B) 129/110 A)  $2^6 \times 3^4$ A) 3 D)  $\sqrt{2}$ A) 0.714285... (C) Assertion (A) is true but reason (R) is false Correct option: (A) Both assertion (A) and reason(R) are true and reason (R) is the correct explanation of assertion (A). Correct option: (C) Assertion (A) is true but reason (R) is false. Correct option: (B) Both assertion (A) and reason (R) are true but reason (R) is not the correct explanation of assertion (A). Correct option: (D) Assertion (A) is false but reason (R) is true. Any 4 rational numbers 1 locate on number line as per step 1 1.  $4\sqrt{2}$ between 3/4 and 4/5. 3 314/99 16/81 4 1/333 5 14  $6\sqrt{10} + 10$ 5 convert in p/q form 13 (i) Reciprocal of 4 -  $\sqrt{15} = 4 + \sqrt{15}$ (ii) No, 2.201200120001..... is not a rational number because decimal form of rational numbers is either terminating or non-termination recurring but it is non-terminating non-(iii) time =  $\frac{7\sqrt{2}}{2}$  is an irrational number. recurring. 2 (iii) if x and y are natural numbers, then x=y=5 (i) x=-5 or x=5(iii) U and (i) S (ii) 1 unit

#### GIST/SUMMARY OF THE LESSON:

#### SUMMARY

- A polynomial is an algebraic expression made up of terms consisting of variables and coefficients, combined using addition, subtraction, and multiplication.
- Polynomials are classified based on:
- The number of terms (monomial, binomial, trinomial.
- The degree (linear, quadratic, cubic)
- Zero of a polynomial is a value of the variable for which the polynomial becomes zero.
- Remainder Theorem and Factor Theorem help in polynomial division and factorisation.
- Polynomials can be factorised using algebraic identities and by splitting the middle term.

#### **DEFINITIONS AND FORMULAE:**

#### **DEFINITIONS**

- POLYNOMIAL: An algebraic expression in which the exponents of the variable(s) are non-negative integers. Example:  $4x^3 3x + 7$
- DEGREE OF A POLYNOMIAL: The highest power of the variable in the polynomial.
- Types of Polynomials: Monomial: 1 term (e.g., 5x); Binomial: 2 terms (e.g., x + 2)
- Trinomial: 3 terms (e.g.,  $x^2 + 2x + 1$ )
- **ZERO OF A POLYNOMIAL:** A number a such that p(a) = 0
- **REMAINDER THEOREM:** If p(x) is divided by (x a), then the remainder is p(a)

	■ FACTOR THEOREM: If $p(a) = 0$ , then $(x - a)$ is a factor of $p(x)$	
	FORMULAE AND IDENTITIES	
	ALGEBRAIC IDENTITIES:	
	$ (a+b)^2 = a^2 + 2ab + b^2 $	
	$ (a - b)^2 = a^2 - 2ab + b^2 $	
	$a^2 - b^2 = (a - b)(a + b)$	
	• $(x + a)(x + b) = x^2 + (a + b)x + ab$	
	$ (a+b)^3 = a^3 + 3a^2b + 3ab^2 + b^3 $	
	$ (a-b)^3 = a^3 - 3a^2b + 3ab^2 - b^3 $	
	$ a^3 + b^3 = (a+b)(a^2 - ab + b^2) $	
	$a^3 - b^3 = (a - b)(a^2 + ab + b^2)$	
	GENERAL POLYNOMIAL FORM:	
	$p(x) = a_0 + a_1 x + a_2 x^2 + + a_n x^n, \text{ where } a_n \neq 0$	
	• Factorisation of Quadratic Polynomial: $ax^2 + bx + c = (px + q)(rx + s)$ , us	1
	MULTIPLE CHOICE QUESTIONS (01 MARK QUESTIONS)	ANSWERS
1	A polynomial has a degree of 0. What is always true about it?	Answer: B
	A. It contains at least one variable  B. It represents a constant	
	C. It must be zero D. It has no terms	
2	The polynomial $p(x) = x^3 + ax + 1$ has no $x^2$ term. What is the coefficient of $x^2$ ? A. 1 B. a C. 0 D. Undefined	Answer: C
3	Which of these is a binomial?	Answer: B.
3	A. $2x^2 + 3x + 1$ B. $x^2 + 4x$ C. $3x^3$ D. 7	Allswei. B.
4	A student adds two polynomials of degrees 3 and 2. The result will be a	Answer: D.
7	polynomial of degree:	Answer. D.
	A. 6 B. 1 C. 5 D. 3	
5	Which of these is a zero of the polynomial $p(x) = x^2 - 4$ ?	Answer: B.
5	A. 0 B. 2 C. 4 D1	Allswei. D.
6	The number of terms in the polynomial $x^2 + 2x - 3x + 7$ is:	Answer: B.
U	A. 2 B. 3 C. 4 D. 5	Allswei. B.
7	What is the degree of the polynomial $3x^4 + 0x^3 + 2x + 5$ ?	Answer: B.
/	A. 3 B. 4 C. 2 D. 1	Allswell D.
8	If $x = -1$ is a zero of $p(x) = x^2 + kx + 1$ , what is the value of k?	Answer: A.
0	A. 2 B. 1 C2 D1	Answer: A.
0		A marriage C
9	Which polynomial has all zero coefficients except the constant term?	Answer: C.
1.0	A. $x^3$ B. $x^2 + x$ C. 5 D. $2x - 3$	A
10	A polynomial is said to be monic if the coefficient of its highest degree term is:	Answer: B.
	A. Zero B. One C. Negative D. Any rational number	
	ASSERTION - REASON BASED QUESTION	
	<b>DIRECTION</b> : In the following questions, a statement of Assertion (A) is followed	by a statement of
	Reason(R). Pick the correct option:	
	A)Both Assertion (A) and Reason(R) are true and Reason(R) is the correct explain.  B) Roth Assertion (A) and Reason(R) are true but Reason(R) is NOT the correct.	3 /
	B) Both Assertion (A) and Reason(R) are true but Reason(R) is NOT the correct C)Assertion (A) is true but Reason(R) is false.	expianation of Assembli (A).
	D)Assertion (A) is true but Reason(R) is true.	
1	Assertion: The degree of the polynomial $2x^3 + 3x^2 - 5x + 1$ is 3.	Solution: (A)
1	Reason: The degree of the polynomial $2x^3 + 3x^2 - 3x + 1$ is 3.  Reason: The degree of a polynomial is determined by the highest power of the	Solution. (A)
	variable.	
2		Colution (A)
2	Assertion: The polynomial $x^2 + 4x + 4$ can be factorized as $(x + 2)^2$ .	Solution: (A)
2	Reason: The polynomial $x^2 + 4x + 4$ is a perfect square trinomial.	Colution (A)
3	Assertion: The remainder when $x^3 + 2x^2 - 7x - 12$ is divided by $x + 2$ is -6.	Solution: (A)

```
Reason: According to the Remainder Theorem, the remainder is p(-2).
   Assertion: The polynomial 2x^2 + 5x - 3 can be factored as (2x - 1)(x + 3).
                                                                                           Solution: B).
   Reason: The factors of -6 that add up to 5 are 6 and -1.
   Assertion: The degree of the polynomial 0 is undefined.
                                                                                           Solution: A)
   Reason: The polynomial 0 has no terms with a variable.
   Assertion: The polynomial x^3 - 8 can be factored as (x - 2)(x^2 + 2x + 4).
                                                                                           Solution: (A)
   Reason: x^3 - 8 is a difference of cubes.
   Assertion: If x + 1 is a factor of p(x), then p(-1) = 0.
                                                                                           Solution: (A)
   Reason: According to the Factor Theorem, if x - a is a factor of p(x),
   then p(a) = 0
   Assertion: The polynomial x^2 + 1 has no real roots.
                                                                                           Solution: A)
   Reason: The discriminant of x^2 + 1 is negative.
   Assertion: The polynomial 3x^2 + 2x - 5 is a quadratic polynomial.
                                                                                           Solution: A)
   Reason: The highest power of the variable in the polynomial is 2.
10 Assertion: If p(x) = x^3 + ax^2 + bx + c, then p(0) = c.
                                                                                           Solution: A)
   Reason: When x = 0, all terms with x become 0.
                      VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)
   Find the value of p(2) if p(x) = x^3 - 2x^2 + 5x - 1.
   SOLUTION: p(2) = (2)^3 - 2(2)^2 + 5(2) - 1 = 8 - 8 + 10 - 1 = 9
   If (x + 2) is a factor of p(x) = x^3 + ax^2 + bx + 8, find the values of a and b if p(1) = 5.
   SOLUTION: p(-2) = 0 \Rightarrow (-2)^3 + a(-2)^2 + b(-2) + 8 = 0; -8 + 4a - 2b + 8 = 0 \Rightarrow 4a - 2b = 0;
   p(1) = 5 \Rightarrow 1 + a + b + 8 = 5 \Rightarrow a + b = -4; Solving, a = -4/3, b = -8/3
   If (x - 1) is a factor of p(x) = x^3 - ax^2 + bx - 1, find the relation between a and b
   Solution: p(1) = 0 \Rightarrow 1 - a + b - 1 = 0 \Rightarrow -a + b \Rightarrow a = b
   Simplify: (x^2 + 2x + 1)/(x + 1) + (x^2 - 2x + 1)/(x - 1).
   SOLUTION: (x + 1)^2/(x + 1) + (x - 1)^2/(x - 1) = x + 1 + x - 1 = 2x
   Find the value of k if x + 1 is a factor of p(x) = x^3 + kx^2 + 2x + 1.
   SOLUTION: p(-1) = 0 \Rightarrow (-1)^3 + k(-1)^2 + 2(-1) + 1 = 0 \Rightarrow -1 + k - 2 + 1 = 0 \Rightarrow k = 2
   Factorize: x^3 + 3x^2 + 3x + 1 - 8y^3.
   SOLUTION: (x + 1)^3 - (2y)^3 = (x + 1 - 2y)((x + 1)^2 + (x + 1)(2y) + (2y)^2)
   Find the remainder when p(x) = x^4 + ax^3 + bx^2 + cx + d is divided by x^2 + 1.
   SOLUTION: Let x^2 + 1 = 0 \Rightarrow x^2 = -1
   p(x) = x^4 + ax^3 + bx^2 + cx + d = (x^2)^2 + ax(x^2) + bx^2 + cx + d = 1 - ax - b + cx + d = (d - b + 1) + x(c - a)
   If (x - 2) is a factor of p(x) = x^3 - 6x^2 + ax - 8, find the value of a.
   SOLUTION: p(2) = 0 \Rightarrow (2)^3 - 6(2)^2 + a(2) - 8 = 0; 8 - 24 + 2a - 8 = 0 \Rightarrow a = 12
   Simplify: (x + y + z)(x^2 + y^2 + z^2 - xy - yz - zx).
   SOLUTION: x^3 + y^3 + z^3 - 3xyz
Find the zeroes of the polynomial p(x) = x^2 - 4.
   SOLUTION: x^2 - 4 = 0; (x - 2)(x + 2) = 0; x = 2 or x = -2
                          SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)
   Find the value of m if x + 1 is a factor of p(x) = x^3 + mx^2 + 2x + m.
   SOLUTION: If x + 1 is a factor of p(x), then p(-1) = 0.
   p(-1) = (-1)^3 + m(-1)^2 + 2(-1) + m = -1 + m - 2 + m = 2m - 3; Since p(-1) = 0, we have: 2m - 3 = 0; 2m = 3;
   m = 3/2
   Factorise: 4x^2 + 9v^2 + 16z^2 + 12xv - 24vz - 16xz
   SOLUTION: 4x^2 + 9y^2 + 16z^2 + 12xy - 24yz - 16xz
   = (2x)^2 + (3y)^2 + (4z)^2 + 2(2x)(3y) - 2(3y)(4z) - 2(2x)(4z) = (2x + 3y - 4z)^2
   (2x + 3y - 4z)^2 = (2x + 3y - 4z)(2x + 3y - 4z)
   If x + y + z = 0, show that x^3 + y^3 + z^3 = 3xyz
   SOLUTION: Given x + y + z = 0, we can rewrite this as: z = -x - y
```

```
x^3 + y^3 + z^3 = x^3 + y^3 + (-x - y)^3 = x^3 + y^3 - x^3 - 3x^2y - 3xy^2 - y^3
    = -3x^2y - 3xy^2 = -3xy(x + y) = 3xy(-x - y) = 3xy(z) = 3xyz
    Therefore, x^3 + y^3 + z^3 = 3xyz.
   Without finding the cubes, factorise(x - 2y)^3 + (2y - 3z)^3 + (3z - x)^3
    SOLUTION: Notice that the sum of the terms (x - 2y) + (2y - 3z) + (3z - x) = 0.
    Using the identity a^3 + b^3 + c^3 = 3abc when a + b + c = 0, we can factorize the expression:
    (x - 2y)^3 + (2y - 3z)^3 + (3z - x)^3 = 3(x - 2y)(2y - 3z)(3z - x)
    If (x-3) and (x-\frac{1}{3}) are the factors of the polynomial px^2 + 3x + r, show that p=r.
    SOLUTION: Let's rewrite the factors as (x - 3) = 0 and (3x - 1) = 0 (by multiplying the second factor by 3 to get rid
    of the fraction). The polynomial can be written in factored form as: px^2 + 3x + r = p(x - 3)(x - 1/3)
    = p(x - 3)(3x - 1)/3 (to make the coefficient of x in the second factor match)
    = (p/3)(x-3)(3x-1) = (p/3)(3x^2-10x+3) = px^2-(10/3)px+p
    Comparing coefficients of the original polynomial and the factored form:
    px^2 + 3x + r = px^2 - (10/3)px + p; The coefficient of x^2 is the same (p = p).
    The coefficient of x in the factored form is -(10/3)p, which should be equal to 3:
    -(10/3)p = 3; -10p = 9; p = -9/10
    The constant term in the factored form is p, which should be equal to r: r = p
    Therefore, p = r = -9/10, which shows that p = r.
   Factorise (\frac{1}{x} + \frac{y}{2})^3
    SOLUTION: Using the identity (a + b)^3 = a^3 + 3a^2b + 3ab^2 + b^3;
    \left(\frac{1}{x} + \frac{y}{3}\right)^3 = \left(\frac{1}{x}\right)^3 + 3\left(\frac{1}{x}\right)^2\left(\frac{y}{3}\right) + 3\left(\frac{1}{x}\right)\left(\frac{y}{3}\right)^2 + \left(\frac{y}{3}\right)^3 = \frac{1}{x^3} + \frac{y}{x^2} + \frac{y^2}{x} + \frac{y^3}{27}
   If x^2 + \frac{1}{x^2} = 7, find the value of x^3 + \frac{1}{x^3}
   SOLUTION: x^3 + \frac{1}{x^3} = (x + \frac{1}{x})(x^2 - 1 + \frac{1}{x^2}); = (x + \frac{1}{x})(x^2 - 1 + \frac{1}{x^2}) = (x + \frac{1}{x})(x^2 - 1 + \frac{1}{x^2}) = (x + \frac{1}{x})(x^2 - 1 + \frac{1}{x^2} + 3 - 3)
= (x + \frac{1}{x})(x^2 + 2 + \frac{1}{x^2} - 3) = (x + \frac{1}{x})((x + \frac{1}{x})^2 - 3); Find (x + \frac{1}{x}) from x^2 + \frac{1}{x^2} = 7
    \left(x + \frac{1}{x}\right)^2 = x^2 + 2 + \frac{1}{x^2} = 7 + 2 = 9; x + \frac{1}{x} = \sqrt{9} \Rightarrow x + \frac{1}{x} = +3 or -3
    x^3 + \frac{1}{r^3} = (+3)(9-3) = +18; x^3 + \frac{1}{r^3} = (-3)(9-3) = -18
   If p(x) = x^3 + 2x^2 + kx + 3 and p(2) = 11, find the value of k.
    SOLUTION: p(2) = 2^3 + 2(2)^2 + k(2) + 3 = 8 + 8 + 2k + 3 = 19 + 2k
    Since p(2) = 11, 19 + 2k = 11; 2k = -8; k = -4
    Simplify: (x + y + z)^2 - (x - y - z)^2
    SOLUTION: Given expression: (x + y + z)^2 - (x - y - z)^2 Using the identity a^2 - b^2 = (a + b)(a - b),
    we can simplify: = [(x + y + z) + (x - y - z)][(x + y + z) - (x - y - z)] = (2x)(2y + 2z) = 4x(y + z)
10 Give expressions for the length and breadth of the following rectangle 25a^2 - 35a + 12
    SOLUTION: 25a^2 - 35a + 12 = 25a^2 - 20a - 15a + 12
    = 5a(5a - 4) - 3(5a - 4) = (5a - 4)(5a - 3); The area of a rectangle is given by length \times breadth.
    So, the possible expressions for length and breadth are: Length: 5a - 3; Breadth: 5a - 4
    or Length: 5a - 4; Breadth: 5a - 3
                                       LONG ANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)
    Verify (a) x^3 + y^3 = (x + y)(x^2 - xy + y^2); (b) x^3 - y^3 = (x - y)(x^2 + xy + y^2)
    SOLUTION: (a) x^3 + y^3 = (x + y)(x^2 - xy + y^2)
    LHS = x^3 + y^3; RHS = (x + y)(x^2 - xy + y^2) = x^3 - x^2y + xy^2 + x^2y - xy^2 + y^3 = x^3 + y^3
    Since LHS = RHS, the identity is verified.
    (b) x^3 - y^3 = (x - y)(x^2 + xy + y^2)
    LHS = x^3 - y^3; RHS = (x - y)(x^2 + xy + y^2) = x^3 + x^2y + xy^2 - x^2y - xy^2 - y^3 = x^3 - y^3
```

Since LHS = RHS, the identity is verified.

Without actual division, prove that  $2x^4 - 5x^3 + 2x^2 - x + 2$  is divisible by  $x^2 - 3x + 2$ .

SOLUTION: To prove that  $2x^4 - 5x^3 + 2x^2 - x + 2$  is divisible by  $x^2 - 3x + 2$  without actual division, we can try to factorize  $x^2 - 3x + 2$  and show that the roots of  $x^2 - 3x + 2$  are also roots of  $2x^4 - 5x^3 + 2x^2 - x + 2$  $x^2 - 3x + 2 = (x - 1)(x - 2)$ 

Let's check if x = 1 and x = 2 are roots of  $2x^4 - 5x^3 + 2x^2 - x + 2$ :

For x = 1:  $2(1)^4 - 5(1)^3 + 2(1)^2 - 1 + 2 = 2 - 5 + 2 - 1 + 2 = 0$ 

For x = 2:  $2(2)^4 - 5(2)^3 + 2(2)^2 - 2 + 2 = 32 - 40 + 8 - 2 + 2 = 0$ 

Since x = 1 and x = 2 are roots of  $2x^4 - 5x^3 + 2x^2 - x + 2$ , and  $x^2 - 3x + 2 = (x - 1)(x - 2)$ , we can conclude that  $2x^4 - 5x^3 + 2x^2 - x + 2$  is divisible by  $x^2 - 3x + 2$ .

If x+4 is a factor of the polynomial  $x^3 - x^2 - 14x + 24$ , find the other factors?

SOLUTION: Given that x + 4 is a factor of the polynomial  $x^3 - x^2 - 14x + 24$ .

Let's perform polynomial division or use synthetic division to find the other factors:

$$x^3 - x^2 - 14x + 24 = (x + 4)(x^2 - 5x + 6)$$

Now, let's factorize the quadratic expression  $x^2 - 5x + 6$ :

$$x^2 - 5x + 6 = x^2 - 2x - 3x + 6 = x(x - 2) - 3(x - 2) = (x - 2)(x - 3)$$

So, the polynomial  $x^3 - x^2 - 14x + 24$ . can be written as:  $x^3 - x^2 - 14x + 24$ . = (x + 4)(x - 2)(x - 3)

The other factors are (x - 2) and (x - 3).

If (a + b + c) = 0, find the value of  $\frac{(b+c)^2}{bc} + \frac{(c+a)^2}{ca} + \frac{(a+b)^2}{ab}$ 

SOLUTION: Given that a + b + c = 0., We can rewrite this as: b + c = -a; c + a = -b; a + b = -c

Now, let's simplify the given expression:  $\frac{(b+c)^2}{bc} + \frac{(c+a)^2}{ca} + \frac{(a+b)^2}{ab}$ 

$$= \frac{(-a)^2}{bc} + \frac{(-b)^2}{ca} + \frac{(-c)^2}{ab} = \frac{(a)^2}{bc} + \frac{(b)^2}{ca} + \frac{(c)^2}{ab}$$

Since a + b + c = 0, we can also write: a = -(b + c)

Now, let's simplify further:  $= \frac{a^3 + b^3 + c^3}{abc}$ Using the identity  $a^3 + b^3 + c^3 - 3abc = (a + b + c)(a^2 + b^2 + c^2 - ab - bc - ca)$  and a + b + c = 0, we get:  $a^3 + b^3 + c^3 = 3abc$ 

So, the expression becomes:  $\frac{3abc}{abc} = 3$ ; The value of the given expression is 3.

If a + b + c = 5 and ab + bc + ca = 10, then prove that  $a^3 + b^3 + c^3 - 3abc = -25$ .

**SOLUTION:** Given that a + b + c = 5 and ab + bc + ca = 10.

We need to prove that  $a^3 + b^3 + c^3 - 3abc = -25$ .

Using the identity:  $a^3 + b^3 + c^3 - 3abc = (a + b + c)(a^2 + b^2 + c^2 - ab - bc - ca)$ 

Let's simplify  $a^2 + b^2 + c^2$ ;  $(a + b + c)^2 = a^2 + b^2 + c^2 + 2(ab + bc + ca)$ 

 $25 = a^2 + b^2 + c^2 + 2(10)$ ;  $a^2 + b^2 + c^2 = 25 - 20$ ;  $a^2 + b^2 + c^2 = 5$ 

Now, let's simplify  $a^2 + b^2 + c^2 - ab - bc - ca = 5 - 10 = -5$ 

Now, using the identity:  $a^3 + b^3 + c^3 - 3abc = (a + b + c)(a^2 + b^2 + c^2 - ab - bc - ca) = 5(-5) = -25$ 

Hence, proved that  $a^3 + b^3 + c^3 - 3abc = -25$ .

#### CASE BASED QUESTIONS (04 MARKS QUESTIONS)

- Vetrivel and Vignesh start a new business together. The amount invested by both partners together is given by the polynomial  $p(x) = 3x^2 + 10x + 7$ . Which is the product of their individual shares.
  - i) Coefficient of  $x^2$  in the given expression.
  - ii) Find the individual shares of both.
  - iii) Find the total amount invested by both if x = 200
  - iv) If another partner also came in the business with share  $q(x) = 7x^2 + 12x + 9$ .

What will be the total amount of combined shares of all.

SOLUTION:

- (i)  $p(x) = 3x^2 + 10x + 7$  here coefficient of  $x^2$  is 3.
- (ii).  $\therefore$  The total amount invested is  $p(x) = 3x^2 + 10x + 7$  and it is given that p(x) is the product of their individual shares.  $\therefore$  we find the zeroes of p(x) by splitting the middle term method,

 $p(x) = 3x^2 + (3+7)x + 7$ ; p(x) = 3x(x+1) + 7(x+1) = (x+1)(3x+7)

Hence, the individual shares are (x+1) and (3x+7)

(iii). if x = 200 then Total amount invested will be  $p(200) = 3(200)^2 + 10(200) + 7$ =  $3 \times 40000 + 2000 + 7 = 120000 + 2000 + 7 = Rs$ . 122007

(iv). another business partner came with share  $q(x) = 7x^2 + 12x + 9$ . :

The total amount =  $p(x) + q(x) = 3x^2 + 10x + 7 + 7x^2 + 12x + 9 = 10x^2 + 22x + 16$ 

- Ritesh lives in Delhi with his family. One day his father told him that we have a property in our village. Ritesh went to the village and found that he has a plot as ancestral property. The width of the plot was x m and length was 5 m less than 7 times of its breadth.
  - (a) Express the length as a polynomial.
  - (b) represent the perimeter as a polynomial.
  - (c) Form the polynomial to represent the area of the plot.

(OR)

(d) Express the perimeter if the length is increased by 2m.

**SOLUTION:** 

- (a) Given width = x m, Length = 7 times the breadth 5 m = 7x 5
- (b)Perimeter = 2(length + breadth) = 2((7x 5) + x) = 2(8x 5) = 16x 10
- (c) Area = length × breadth=  $(7x 5) \times x = 7x^2 5x$
- (d) New length = (7x 5) + 2 = 7x 3

New perimeter = 2(new length + breadth) = 2((7x - 3) + x) = 2(8x - 3) = 16x - 6

- (a) What are the dimensions of the garden?
- (b) Find the perimeter of the garden.
- (c) If length is increased by x units then, what will be the total area of the garden? (OR)
- (d) What will be the total cost of preparing the garden, if the cost per sq unit is Rs.50 SOLUTION:
- (a) Given area of the garden:  $x^2 3x 4$ ; Let's factorize the expression:  $x^2 3x 4 = x^2 4x + x 4 = x(x 4) + 1(x 4) = (x 4)(x + 1)$

The dimensions of the garden are (x - 4) and (x + 1).

- (b) Perimeter = 2(length + breadth) = 2((x 4) + (x + 1)) = 2(2x 3) = 4x 6
- (c) If length is increased by x units, new length = (x 4) + x = 2x 4

New area =  $(2x - 4)(x + 1) = 2x^2 - 2x - 4$ 

(d)Area of the garden:  $x^2 - 3x - 4$ 

Total cost = Area × Cost per square unit =  $(x^2 - 3x - 4) \times 50 = 50x^2 - 150x - 200$ 

#### **HOTS**

1 If  $x + 1/x = 2\sqrt{3}$ , find the value of  $x^5 + 1/x^5$ 

**SOLUTION**:  $(x + 1/x)^2 = x^2 + 2 + 1/x^2 = (2\sqrt{3})^2 = 12$ .;  $x^2 + 1/x^2 = 12 - 2 = 10$ .

 $x^3 + 1/x^3 = (x + 1/x)^3 - 3(x + 1/x) = (2\sqrt{3})^3 - 3(2\sqrt{3}) = 24\sqrt{3} - 6\sqrt{3} = 18\sqrt{3}$ .

 $(x^2 + 1/x^2)^2 = x^4 + 2 + 1/x^4 = 10^2 = 100$ . L  $x^4 + 1/x^4 = 100 - 2 = 98$ .

 $Sx^5 + 1/x^5 = (x + 1/x)(x^4 + 1/x^4 - x^2 - 1/x^2 + 1) = (2\sqrt{3})(98 - 10 + 1) = 2\sqrt{3}(89)$ ; = 178 $\sqrt{3}$ .

Factor the following expression without using long division or direct expansion:  $x^4 - 4x^2 + 3$ , Then interpret the factorisation in terms of real zeroes of the polynomial.

SOLUTION: Step 1: Factor the expression as a quadratic in disguise

Let's treat  $x^2$  as a variable. The expression  $x^4 - 4x^2 + 3$  can be factored like a quadratic equation  $ax^2 + bx + c$ , where a = 1, b = -4, and c = 3, but with  $x^2$  as the variable. So,  $x^4 - 4x^2 + 3 = (x^2 - 3)(x^2 - 1)$ .

Step 2: Factor each difference of squares  $(x^2 - 1)$  can be factored into (x - 1)(x + 1).

 $(x^2 - 3)$  can be factored into  $(x - \sqrt{3})(x + \sqrt{3})$ .

```
Step 3: Write the final factorization x^4 - 4x^2 + 3 = (x - \sqrt{3})(x + \sqrt{3})(x - 1)(x + 1).
Step 4: Interpret the factorization in terms of real zeroes
The real zeroes of the polynomial are the values of x that make each factor equal to zero. Setting each factor
equal to zero gives us: x - \sqrt{3} = 0 \Rightarrow x = \sqrt{3}; x + \sqrt{3} = 0 \Rightarrow x = -\sqrt{3}; x - 1 = 0 \Rightarrow x = 1
x + 1 = 0 \Rightarrow x = -1; The final answer is: \{(x - \sqrt{3})(x + \sqrt{3})(x - 1)(x + 1)\}
You are given a cubic polynomial: f(x) = x^3 - 6x^2 + 11x - 6. Without performing long division, show that
x=1, x=2, and x=3 are zeroes of the polynomial. Explain how patterns in coefficients (like sum or symmetry)
might help you guess the factors quickly?
SOLUTION: f(1) = (1)^3 - 6(1)^2 + 11(1) - 6 = 1 - 6 + 11 - 6 = 0.
f(2) = (2)^3 - 6(2)^2 + 11(2) - 6 = 8 - 24 + 22 - 6 = 0.
f(3) = (3)^3 - 6(3)^2 + 11(3) - 6 = 27 - 54 + 33 - 6 = 0.
Since x = 1, x = 2, and x = 3 are zeroes, (x - 1), (x - 2), and (x - 3) are factors. Thus, f(x) = (x - 1)(x - 2)(x - 3).
Expanding (x-1)(x-2)(x-3) = (x^2-3x+2)(x-3) = x^3-3x^2-3x^2+9x+2x-6=x^3-6x^2+11x-6, which
matches the given polynomial.
The coefficients of the polynomial are 1, -6, 11, -6. Notice that the sum of the coefficients is 1 - 6 + 11 - 6 = 0.
This suggests that x = 1 might be a root, as f(1) = 0. Given the pattern and the fact that the polynomial is cubic,
trying simple integer values like x = 1, x = 2, and x = 3 can quickly lead to finding the roots.
The final answer is: \{(x - 1)(x - 2)(x - 3)\}
A polynomial f(x) leaves a remainder of 5 when divided by x-1, and a remainder of 3 when divided by x+1. Find
the remainder when f(x) is divided by x^2 - 1, and explain your reasoning using the Remainder Theorem.
SOLUTION: When f(x) is divided by x^2 - 1 = (x - 1)(x + 1), the remainder will be of the form ax + b, because the
divisor is a quadratic polynomial.
Given f(x) leaves a remainder of 5 when divided by x - 1, by the Remainder Theorem, f(1) = 5.
For the remainder ax + b, this implies a(1) + b = 5.
Given f(x) leaves a remainder of 3 when divided by x + 1, by the Remainder Theorem, f(-1) = 3.
For the remainder ax + b, this implies a(-1) + b = 3.
we have two equations:1). a + b = 5 2). -a + b = 3
Adding the two equations to eliminate a: 2b = 8, which implies b = 4.
Substitute b = 4 into one of the equations, a + 4 = 5, which implies a = 1.
The remainder when f(x) is divided by x^2 - 1 is ax + b = 1x + 4 = x + 4.
The final answer is: \{x + 4\}
A polynomial f(x) = x^4 + px^2 + q is said to be symmetric if f(x)=f(-x)
What does symmetry mean in this context?
If f(1)=6 and f(2)=17, find the values of p and q.
SOLUTION: Symmetry in the polynomial f(x) = x^4 + px^2 + q means that the polynomial remains unchanged
when x is replaced by -x. Since f(-x) = (-x)^4 + p(-x)^2 + q = x^4 + px^2 + q = f(x), the polynomial is
indeed symmetric with respect to the y-axis.
Given f(1) = 6 and f(2) = 17, we can set up two equations:
1. (1)^4 + p(1)^2 + q = 6 \Rightarrow 1 + p + q = 6
```

2. 
$$(2)^4 + p(2)^2 + q = 17 \Rightarrow 16 + 4p + q = 17$$

From equation 1: p + q = 5. From equation 2: 4p + q = 1.

Subtract the first equation from the second equation: (4p + q) - (p + q) = 1 - 5.

This simplifies to 3p = -4, so p = -4/3.

Substitute p = -4/3 into p + q = 5: -4/3 + q = 5.

$$q = 5 + 4/3 = (15 + 4)/3 = 19/3$$
.

The final answer is: p = -4/3, q = 19/3

#### **EXERCISE**

#### MULTIPLE CHOICE QUESTIONS (1 MARK)

- If xy = 6 and 3x+2y = 12, the value of  $9x^2 + 4y^2$  will be b) 72 c) -72 d) none of these a)70
  - One of the factors of  $(25x^2 1) + (154 + 5x)^2$  is:

	a) $5 + x$ b) $5 - x$ c) $5x - 1$ d) $10x$	
3	What is the degree of Polynomial $\sqrt{3}$ ?	
	a) 0 b) 1 c) 2 d) 2	-
4	If $(x - a)$ is a factor of $p(x) = a - x$ , then which of the following is true?	
5	(a) $p(a) = 2$ (b) $p(b) = 0$ (c) $p(a) = 0$ (d) $p(c) = 2$	
5	8 is a polynomial of degree (a) 0 (b) 1 (c) 2 (d) 3	
	ASSERTION - REASON BASED QUESTIONS	t
	A statement of assertion (A) is followed by a statement of Reason (R). Choose the correct	
	answer out of the following choices.	
	a) Both A and R are true and R is the correct explanation of A	
	b) Both true but R is false	
1	d) A is false but R is true Assertion (A): The factorisation of $z^3 + 125$ is $(z + 5)(z^2 - 5z + 25)$	-
1	Reason (R): We know $x^3 + y^3 = (x + y)^3 + 3xy(x + y)$	
2	Assertion (A): The polynomial $p(x) = 4x^3 - 3x^2 + 5x - 6$ when divided by $(x - 1)$ gives zero as the	+
	remainder.	
	Reason (R): $(x-1)$ is a factor of the polynomial $p(x) = 4x^3 - 3x^2 + 5x - 6$	
3	Assertion (A): The degree of Polynomial of $(x - 2)(x - 3)(x + 4)$ is 4.	
	Reason (R): The number of zeros of a polynomial is the degree of that polynomial.	_
4	Assertion (A): $(x + 1)$ is a linear polynomial.	
_	Reason (R): Linear polynomials have one zero.	-
5	Assertion: The constant polynomial 0 is called zero polynomial. Reason: $\sqrt{x+3}$ is a polynomial.

#### CASE BASED QUESTIONS

- 1 Manoj is making a box using cardboard. He found a cardboard box with sides 9cm by 9cm. He cuts out four squares of equal size at corners and folds up the sides to make an open box. Manoj paints it beautifully and puts all his pens in it.
  - (a) Suppose the side of the square cut out is x cm, then find the polynomial to find the volume of the cuboid formed.
  - (b) Identify the degree of the polynomial.
  - (c) If the side of the square is 1 cm then what is the volume of the box? (OR)
  - (d) If the whole box is covered by a sheet of paper then what will be the area of paper?
- Rahul is a landscape designer who is designing a rectangular garden bed. The length of the bed is 2 meters more than its width. If the area of the bed is given by the polynomial  $x^2 + 2x$ , where x is the width of the bed:
  - (i) What is the length of the garden bed in terms of x?
  - (ii) If the area of the bed is 15 square meters, find the width and length of the bed.
  - (iii) Find the value of the polynomial  $x^2 + 2x$  when x = 4.
  - (iv)If the polynomial  $x^2 + 2x$  represents the area of the bed, what type of polynomial is it?

- A shipment service provider uses three types of containers for shipping materials. The height and width of the three containers are the same. The containers' height is 0.15 m more than their width, and the volume of the smallest container is 652 m<sup>3</sup>
  - (i) Write a polynomial relating Container 1's length, breadth and height with its volume.
  - (ii) Which of the following statements is true?

The volume of the three containers is the same.

The length of the three containers is the same.

The volume of Container 3 is 2,608 m<sup>3</sup>.

The length of Container 3 is 4 times the length of Container 2.

(iii) What is the height of each container?

#### HOTS

- If both(x + 1) and (x 1) are factors of  $ax^3 + x^2 2x + b$ , find a and b.
- If  $(x^2-1)$  is a factor of  $ax4+bx^3+cx^2+dx+e$ , show that a+c+e=b+d=0

#### ANSWERS

#### MULTIPLE CHOICE QUESTIONS

- 1 b) 72.
- 2 d) 10x.
- 3 a) 0.
- 4 c) p(a) = 0
- 5 a) 0.

#### ASSERTION - REASON BASED QUESTIONS

- 1 c) A is true but R is false.
- a) Both A and R are true and R is the correct explanation of A.
- d) A is false but R is true.
- 4 b) Both A and R are true but R is not the correct explanation of A.
- 5 c) A is true but R is false.

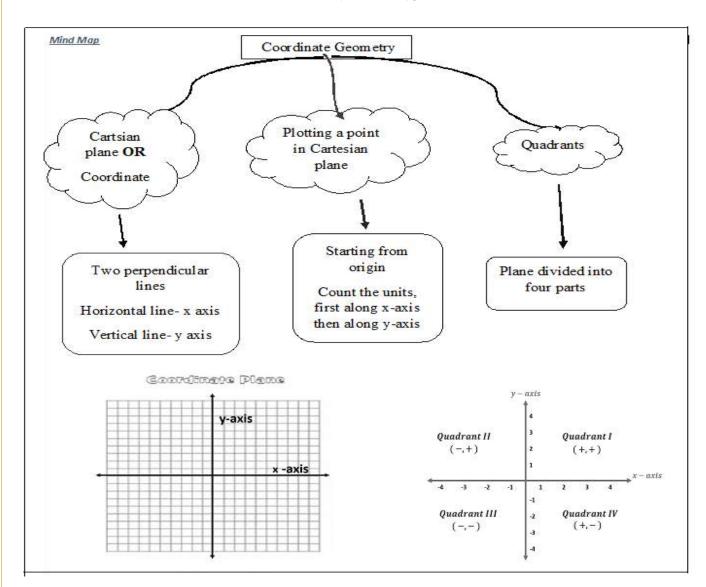

#### VERY SHORT ANSWER TYPE QUESTIONS

- 1 9  $4x^2$
- Since p(-2) = 0, x + 2 is a factor of  $x^3 + 3x^2 + 5x + 6$ .
- The zero of the polynomial is x = 0.
- 4 x = 1:  $x^{100} + 1/x^{101} = 1^{100} + 1/1^{101} = 1 + 1 = 2$
- 5 The factorised form is  $(2x + 5)^2$ .

## SHORT ANSWER TYPE QUESTIONS The factorised form is (x - 2)(x + 3)(2x - 5). 2 The value of k is 3. $(x - 1/x)^2$ $8x^3 - y^3 + 27z^3 + 18xyz$ 5 The value of k is -3/7LONG ANSWER TYPE QUESTIONS The values of a, b, c, and d are: a = 0; b = -7/3; c = 2; d = 28/3the value of $x^3 + y^3 + z^3 - 3xyz$ is 32. 3 The values of a and b are: a = 3; b = -4The value of k is 3, and p(-2) is -17. The value of a is 3, and the other factor is $2x^2 + x + 1$ . CASE BASED QUESTIONS (a) The polynomial to find the volume is $4x^3 - 36x^2 + 81x$ . (b) The degree of the polynomial $4x^3 - 36x^2 + 81x$ is 3. (c) The volume of the box is 49 cubic cm. (d) The area of the paper is $(9 - 2x)^2 + 4x(9 - 2x)$ or 77 square cm for x = 1. (i) Length = x + 2(ii) Width = 3 meters Length = 3 + 2 = 5 meters (iii) 24 (iv) The polynomial $x^2 + 2x$ is a quadratic polynomial. (i) $652 = 1_1 \times x \times (x + 0.15)$ (ii) C. The volume of Container 3 is 2608 m<sup>3</sup>. (iii) The height of each container is 7.15 m. **HOT QUESTIONS** a - b = 3 and a + b = 1 solving we get a=2 and b = -1Put p(1) we get a + b + c + d + e = 0, if p(-1) we get a - b + c - d + e = 0comparing equations, we get a + c + e = b + d = 0

SOLUTION:

#### A boy marks four points (4,0), (0.2), (-4,0) and (0,-2) on the graph paper and joins these points by Line segments and see that a quadrilateral figure is obtained.

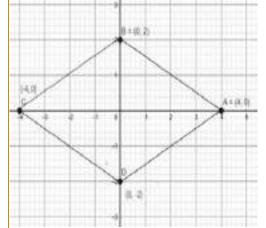

- i) plot these points on the graph paper
- ii) Name the quadrilateral obtained after joining the points
- iii) what is the area of the figure obtained?

**SOLUTION:** i) Right Side

- ii) Rhombus
- iii) Area of Rhombus =  $\frac{1}{2} \times d_1 \times d_2$

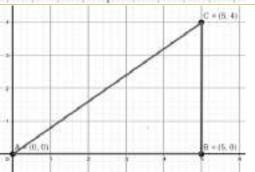

$$= \frac{1}{2} \times AC \times BD = \frac{1}{2} \times 8 \times 4$$

= 16 sq. unit

Draw a triangle with vertices (0, 0), (5,0) and (5, 4). Find its area. SOLUTION: It's a Right angled triangle

Area of triangle =  $\frac{1}{2}$  x base x height =  $\frac{1}{2}$  x 5 x 4 = 10 sq. unit

In the given figure, POQ is a triangle with coordinate of P and O as  $(\sqrt{13}, 0)$  and (0,0) respectively. If

PQ = 7, find the coordinates of Q.

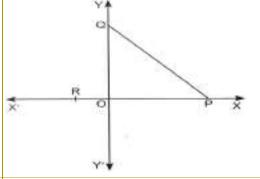

**SOLUTION:** Coordinate of  $P = (\sqrt{13}, 0)$  and Q = (0,0)

So,  $OP = \sqrt{13}$  and PQ = 7 (given)

Using Pythagoras property

$$(OP)^2 + (OQ)^2 = (PQ)^2$$
;  $(\sqrt{13})^2 + (OQ)^2 = (7)^2$ ;  $13 + (OQ)^2 = 49$   
 $(OQ)^2 = 49 - 13$ ;  $OQ = \sqrt{36}$ ;  $OQ = 6$ 

So, the coordinates of Q is (0, 6) because Q lies on y-axis.

10 The perpendicular distance of the point A(m,2n) from the x-axis and y-axis is 6 units. Given that m < 0 and

n > 0, then what are the coordinates of point B(n+1, m)?

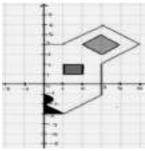

**SOLUTION:**: Since, the perpendicular distance of the point A(m,2n) from the xaxis and y-axis is 6 units Therefore, (m,2n) = (-6.6) [ because m < 0 and n > 0 i.e II quadrant; m = -6 and 2n = 6m = -6 and n =  $\frac{6}{2}$  = 3; So, Coordinates of

point

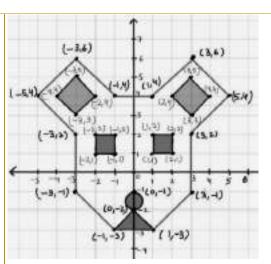

B(n+1, m) = (3+1, -6) = (4, -6)

#### LONGANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

Ronny was reading a Maths magazine in which he saw an interesting figure which was half drawn as shown below. He wish to draw it completely. Draw again and help him to complete the figure and tell which line of symmetry you use. Along with that mark all the coordinates used in this drawing.

**SOLUTION**: We use y-axis as the line of symmetry to complete the figure

Lucky started from origin towards North-east direction to reach his school where east direction is represented by the positive x-axis. While coming back from school, he came with different path. He started from school 8km towards south direction and then turn right to walk 6km to reach home again. If speed of Lucky is 5 km/hr, how much time will he take to reach his school in the morning and what are the coordinates of school.

**SOLUTION:** Coordinates of School (B) = (6,8)

To find out the distance from Home to School (OB)

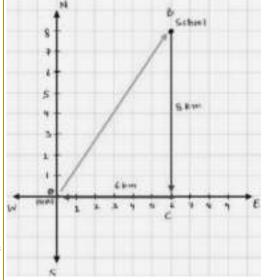

We use Pythagoras property,

$$(OB)^2 = (BC)^2 + (CO)^2$$
;  $(OB)^2 = 8^2 + 6^2$ ;

$$(OB)^2 = 64 + 36$$
;  $(OB)^2 = 100$ ;  $OB = \sqrt{100}$ ;  $OB = 10$  km

Since, the distance between home to school is 10km and speed of lucky is 5km/hr. So, Time taken to reach his school from home in the

morning =  $\frac{distance}{speed} = \frac{10}{5} = 2hrs$ 

Once an Archaeologist was doing research in cave where he got a map to find treasure. So he went in search of treasure. But when he reached there his map fell into the water and everything vanished from the map. On the other side Bandit know the way to reach there but Police is behind him to catch. Tell archaeologist about the coordinates of Treasure and the length of shortest path to get the treasure before bandit (1 unit in map = 1Km).

**SOLUTION**: Coordinates of treasure (T) = (7, 14)

Coordinates of Archaeologist (A) = (2, 2)

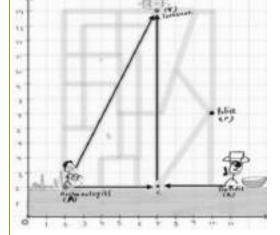

Coordinates of point C = (7, 2)

So, 
$$AC = 7 - 2 = 5$$
; And  $CT = 14 - 2 = 12$ 

And the shortest path to reach there is AT, So, for finding length of shortest path, we use Pythagoras property

$$(AT)^2 = (AC)^2 + (CT)^2; (AT)^2 = 5^2 + 12^2$$

$$(AT)^2 = 25 + 144$$
;  $(AT)^2 = 169$ ;  $AT = \sqrt{169}$ ;  $AT = 13$ km. So, the length of shortest path AT is 13km.

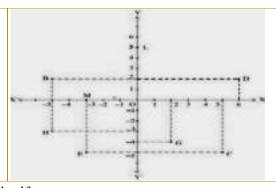

4 From the figure write the answer of the following:

- (i)The coordinates of D.
- (ii) The point identified by the coordinates (-5, 2).
- (iii)The abscissa of the point B.
- (iv)The ordinate of the point H.

The point identified by the coordinates (2,-4).

**SOLUTION**: i) D (6,2) ii)B iii) -5 iv) -3 v) G

5 Without plotting the points indicate the quadrant in which they will lie, if

- (i) the ordinate is 5 and abscissa is -3
- (ii) the abscissa is -5 and ordinate is -3
- (iii) the abscissa is -5 and ordinate is 3
- (iv) the ordinate is 5 and abscissa is 3
- (v) the abscissa is 2 and ordinate is -5

SOLUTION:

The point is (-3,5). Hence, the point lies in the II quadrant.

The point is (-5,-3). Hence, the point lies in the III quadrant.

The point is (-5,3). Hence, the point lies in the II quadrant.

The point is (3,5). Hence, the point lies in the I quadrant.

The point is (2,-5). Hence, the point lies in the IV quadrant.

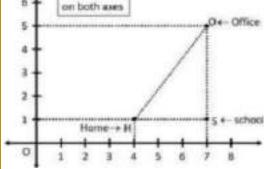

#### CASE BASED QUESTIONS (04 MARKS QUUESTIONS)

Shristi has to reach her office every day at 8:00 am. On the way to her office, she drops her son at school. Now, the location of Shristi's home, her son's school and her office are represented below by the map, Using the details given, answer the following questions Find the coordinate of Shristi's home?

Find the Area enclosed by triangle HOS?

Find the distance between Shristi's home and his son's school? **SOLUTION** (i) (4, 1)

(ii) Area of triangle =  $\frac{1}{2}$  × base × height =  $\frac{1}{2}$  × 3 × 4= 6 sq. km (iii) 3km

1 unit = 1 km

- Vivek wants to purchase a painting for drawing room. First of all, he puts a grid on the wall so that he could hang a painting on that area. The corner points of the grid are A (2, 4); B (6, 4); C (6, 8) and D (2, 8).
  - i) what is the area of the painting?
  - ii) Write the intersection point of the diagonal of the paintings.
  - iii) what is the perimeter of the painting?

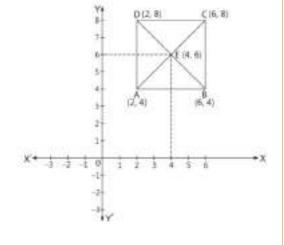

OR

Write the image of the point B with respect to y-axis.

**SOLUTION:** i) Area = side x side =  $4 \times 4 = 16$  sq unit

- ii) intersection point of the diagonals is E Coordinate of the point E is (4, 6)
- iii) Perimeter of the painting = perimeter of square
- $= 4 \times \text{side}$ ; =  $4 \times 4$ ; =  $16 \times 9$ . unit

OR Image of point B with respect to y-axis is (-6, 4)

A teacher decides to teach some important concepts of geometry through playground activity so he takes all the students to the playground. There he divides playground into two small playing area, one is in the shape of rectangle and the other one is triangular in shape, which is shown in figure on the basis of the given information, students are asked some questions.

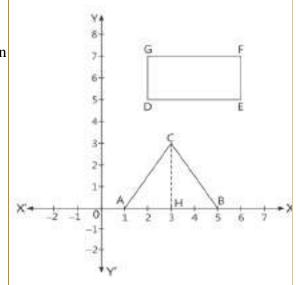

- ii) Find the area of a triangle ABC.
- iii) Find the coordinate of point G.

OR Find the area of a rectangle DEFG.

**SOLUTION**: i) Altitude CH = 3 unit

- ii) Area of triangle =  $\frac{1}{2}$  × base × height =  $\frac{1}{2}$  × 4 × 3 = 6 sq. unit
- iii) Coordinate of G (2, 7)
- iv) Area of rectangle = length x breadth = 4unit x 2 unit = 8 sq. unit

#### HOTS

1 There is a square lawn PQRS in the ground as shown in below figure i) What is area of the lawn PQRS.

SOLUTION: Given AP=5m, AS=3m, PS =?

Using Pythagoras property,  $(PS)^2 = (AP)^2 + (AS)^2$ 

$$(PS)^2 = 5^2 + 3^2$$
;  $(PS)^2 = 25 + 9$ ;  $(PS)^2 = 34$ ;  $PS = \sqrt{34}$  m

So, side of square lawn = v34 m , Area of lawn PQRS = side x side =  $\sqrt{34}$  m x  $\sqrt{34}$  m = 34 sq. m

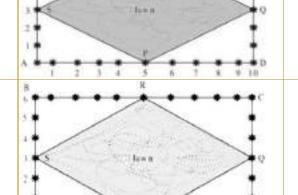

of fencing?

SOLUTION: For fencing lawn PORS, we should perimeter first.

Perimeter of lawn PQRS =  $4 \times \text{side} = 4 \times \sqrt{34} \text{m} = 4\sqrt{34} \text{ m}$ 

Cost of fencing per metre = Rs  $20\sqrt{34}$ 

Cost of fencing  $4\sqrt{34}$  m = Rs  $(20\sqrt{34})$  x  $(4\sqrt{34})$  = Rs 2720

2a Today is Rohan's birthday. So he asked his friend to help him in shopping for the party. Rohan walked 3km from his house towards east direction and then turn left to meet his friend. From there, they together went to market and bought some items. After shopping, both of them came to Rohan's house to do arrangements.

Based on above information, answer the following questions:

How can Rohan reach to his friend early.

Suggest him the way and shortest distance to reach to his friend.

**SOLUTION:** Coordinates of A = (1,2), B = (4,2) and C = (4,6)

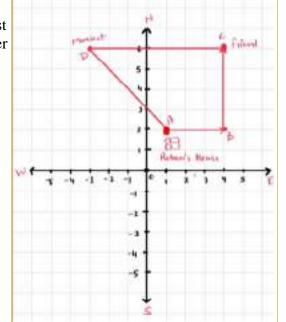

Length of AB = abscissa of B – abscissa of A = 4-1=3 units

Length of BC = ordinate of C – ordinate of B = 6 - 2 = 4 units

i) Rohan can reach to its early by following the path diagonally. Length of diagonal AC can be find using Pythagoras property

$$(AC)^2 = (AB)^2 + (BC)^2$$
;  $(AC)^2 = 3^2 + 4^2$ ;  $(AC)^2 = 9 + 16$ 

 $(AC)^2 = 25$ ;  $AC = \sqrt{25} = 5 \text{ km}$ 

2b Is the figure formed in the picture is concave or convex polygon? Give reasons to support your answer. SOLUTION: Figure formed in the picture is convex polygon because polygons that are convex have no portions of their diagonals in their exteriors or any line segment joining any two different points, in the interior of the polygon, lies wholly in the interior of it **EXERCISE** MULTIPLE CHOICE QUESTIONS Points (1,2), (-2,-3), (2,-3); b) Do not lie in the same quadrant c) Third quadrant d) Fourth quadrant a) First quadrant The mirror of a point (3, 4) on y-axis is: b) (-3, 4) c) (3, -4) d) (-3, -4)a) (3, 4) Signs of the abscissa and ordinate of a point in the second quadrant are respectively b) +, c) -, + If the coordinates of two points are A(-7.9) and B(3.4), then (abscissa of A) – (abscissa of B) is a) 4 b) -10 c) 10 d) -5 In which of the following points lies on the line y = -x? a) (2,2) b) (2,-2) c)(3,3)d)(-2, 3)ASSERTION REASON TYPE QUESTIONS Assertion(A): Point (2,2) lies in second quadrant. Reason(R): Point of the type (+,+) lies in first quadrant Assertion(A): The points (-7, 2) and (2, -7) are at different positions in the coordinate plane. Reason(R): The perpendicular distance of the point A(5, 6) from the y-axis is 6 Assertion(A): The abscissa of a point (1, 8) is 1 Reason(R): The point (0,1) lies on y-axis. Assertion(A): Abscissa of a point is positive in I and IV quadrant Reason(R): If (x + 2, 4) = (5, y - 2), then coordinates (x, y) are (3,6)Assertion(A): ABCD is a quadrilateral in which P, O, R and S are the mid points of AB, BC, CD and DA respectively. Then, PQRS is a parallelogram... Reason(R): The line segment joining the mid points of any two sides of a triangle is parallel to the third side and equal to half of it. VERY SHORT ANSWER TYPE QUESTIONS In which quadrant will a point lie if it's both the coordinates are positive? Write the coordinates of the point at which two coordinate axes meet. Write the coordinates of the point which lies at a distance of x-units from x-axis and y units from y-axis. Find the coordinates of the point which lies on x-axis at a distance of 5 units from y-axis Find the coordinates of the point which lies on y-axis at a distance of 9 units from x-axis in the negative direction SHORT ANSWER TYPE QUESTIONS If we plot the points P(5, 0), Q(5,5), R(-5, 5) and S(-5, 0), which figure will we get? Name the axis of symmetry of this figure? If the coordinates of two points are P(-2,3) and Q(-3,5), then find [(abscissa of P) – (abscissa of Q)] + [(ordinate of Q) – (ordinate of P)]. Scale: On X-axis and Y-axis, Write the coordinates of the point A, B, C, D, E and F of the 5 small divisions = 2 units figure formed on the graph. Also, write coordinates of the points of intersection of AC and DF with the x-axis.

- A rectangular field is of length 10 units & breadth 8 units. One of its vertex lie on the origin. The longer side is along x-axis and one of its vertices lie in first quadrant. Find all the vertices.
- Plot the point P(-5, 4) and from it draw PM and PN as perpendicular to x-axis and y-axis respectively. Write the coordinates of the points M and N.

#### LONG ANSWER TYPE QUESTIONS

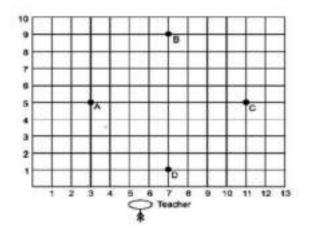

The following table gives the relation between natural numbers and odd natural numbers. Plot the points and join them. Do you get a straight line by joining these points? Analyse each coordinate and establish a relation between ordinate and abscissa.

х	1	2	3	4	5	6	7
y	3	5	7	9	11	13	15

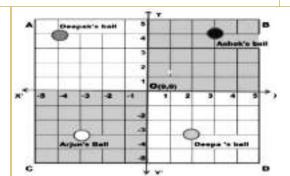

- 2 Without plotting the points indicate the quadrant in which they will lie, if
  - (i) the ordinate is -9 and abscissa is 2 (ii) the abscissa is 7 and ordinate is 8
  - (iii) the abscissa is 3 and ordinate is -2 (iv) the ordinate is -5 and abscissa is 3
  - (v) the abscissa is -2 and ordinate is -5
- Plot the following points and write the name of the figure obtained by joining in order P(3,2), Q(-7,-3), R(6,-3) and S(2,2). Find its area.
- Rohit started from origin towards south-west direction to reach his school where west direction is represented by the negative x-axis. While coming back from school, he came with different path. He started from school 4km towards North direction and then turn right to walk 3km to reach home again. If speed of Lucky is 5 km/hr, how much time will he take to reach his school in the morning and what are the coordinates of school.
- Plot the four points (3,0), (0,3), (-3,0) and (0,-3) on the graph paper and join them by line segments in an order and observe the figure formed.
  - i) Name the polygon formed. ii) Find the area of the polygon obtained?

#### CASE BASE STUDY QUESTIONS

- 1 Students of a school are standing in rows and columns in their playground for a drill practice. A, B, C and D are the positions of four students as shown in the figure.
  - i) What are the coordinates of A and B respectively?
  - ii) What are the coordinates of C and D respectively?
  - iii) What is the distance between B and D? OR What is the distance between A and C?

- There is a square park ABCD. Four children Ashok ,Deepa ,Arjun and Deepak went to play with their balls. The colour of the ball of Ashok ,Deepa ,Arjun and Deepak are Red, green, yellow and blue respectively. All four children roll their ball from centre point O in the direction of XOY, X'OY, X'OY' and XOY'. Their balls stopped as shown in the above image.
  - i)What are the coordinates of the ball of Ashok?
  - ii) What are the coordinates of the ball of Deepa?
  - iii) What the line XOX' called? OR What the point O(0,0) called?

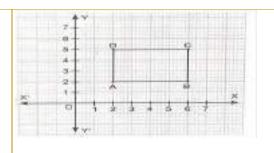

For a group activity of class IX, teacher divided the space as cartesian plane and chairs are placed at various points for the group of four students at points A, B, C and D as shown in the picture below:

Now answer the following questions:

i) Write the coordinates of A, B, C, D.

- ii) perimeter of rectangle is?
- iii)Find the area of rectangle ABCD

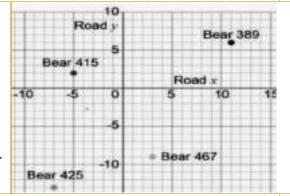

#### **HOTS**

A forest ranger keeps track of bears in his area. He plotted their location on a graph. The origin represents the ranger's control room's location. To access and maintain equipment, Road x and Road y have been laid and paved inside the forest. They pass through the control room. One unit on the graph paper represents 1km.

Based on the information, answer the following questions:

- i) A tiger is at (11, 4). How far from it is the nearest bear?
- ii) In the forest, rain shelters are at an interval of 2km along paved roads. A forest ranger is travelling on Road x. He crosses a rain shelter located at (3,0). What is likely to be the location of the next shelter?

Plot the points P(0, -4) anQ(0, 4) on the graph paper. Now, plot the points R and S such that triangle PQR and triangle PQS are isosceles triangles.

## CHAPTER – 04 LINEAR EQUATION IN TWO VARIABLES

#### MIND MAPPING

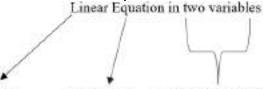

#### GIST/SUMMARY OF THE LESSON:

- LINEAR EQUATION
- SOLUTION OF LINEAR EQUATION
- GRAPHICAL REPRESENTATION

#### **DEFINITIONS AND FORMULAE:**

#### MEANING OF THE CHAPTER NAME:

• GENERAL FORM of linear equation in two variable ax + b = 0

Degree-1

Equality '=' two variables mainly x & y

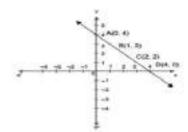

where a, b, c are real numbers and a & b are coefficients of x and y respectively such that a & b  $\neq$  0 and x, y are variables raising power 1

- LINEAR EQUATION IN ONE VARIABLE
- GENERAL FORM: ax + b = 0, where a and b are real numbers and  $a \neq 0$  only one variable
- GRAPH: A graph on a linear equation always show a straight line. (Hint: linear means straight)
- SOLUTION: Points lying on a line are known as Solution.

In other words, the pair of values x and y which satisfies the equation are known as Solution.

Example: x + y = 4; Solution of equation x + y = 4 are

(0, 4) (1, 3) (2, 2) (4, 0) and many more.

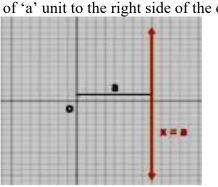

A line has infinitely many Solution as infinite points lie on a line.

Equation of x-axis: y = 0 (ordinate on x axis is zero)

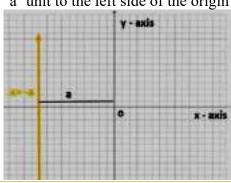

Equation of y-axis: x=0 (abscissa on y axis is zero)

Equations of lines parallel to x- axis and y- axis

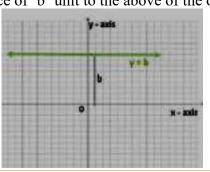

x = a; Equation of a line parallel to y- axis at a distance of 'a' unit to the right side of the origin

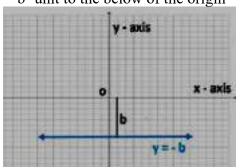

x = -a; Equation of a line parallel to y- axis at a distance of 'a' unit to the left side of the origin

y = b; Equation of a line parallel to x- axis at a distance of 'b' unit to the above of the origin

y = -b; Equation of a line parallel to x- axis at a distance of 'b' unit to the below of the origin

MULTIPLE CHOICE QUESTIONS (01 MARK QUESTIONS)

- A linear equation has
  - a) unique Solution b) two Solution
  - c) no Solution
- d) infinitely many Solution
- which of the following is not a linear equation
  - a) 3x + 3 = 5x + 2
- b)  $x 5 = \frac{5}{1}x 3$
- c)  $x + 5 = 3x^2 5$
- d)  $(x+2)^2 = x^2 8$
- The equation of y-axis is
  - a) x = a
- b) y = b
- d) y = 0
- The graph of 7x + 11y + 13 = 0 is
  - a) a straight line parallel to x-axis

  - c) a general straight line
- c) x = 0
- SOLUTION: c
- b) a straight line parallel to y-axis d) None of these
- If x = 2 and y = 3 is Solution of the linear equation 23ax + 37ay = 785 then the value of SOLUTION: d
- a is a) 0
- b) -5
- c) 1
- d) 5
- Which of the linear equation has Solution as x = -3, y = 5?
  - a) 2x + y = 8 b) x + 2y = 8 c) x + y = 8
  - The equation y = 0 represents –
- d) -x + y = 8
- b) y-axis a) x-axis c) a line parallel to x-axis d) a line parallel to y-axis The graph of x + y = 2 is a line which meets the x-axis at the point.
- a) (2, 0)
- b) (3, 0)
- c)(0, 2)
- d)(0,3)
- The intersection point of the lines x = -5 and y = -3
  - a) (5, 3)
- b) (5, -3)
- c) (-5, -3)
- d) (-5, 3)
- 10 Any point on the line y = x is of the form

SOLUTION:c

SOLUTION: d

SOLUTION: c

SOLUTION: c

SOLUTION: d

SOLUTION: a

SOLUTION:a

SOLUTION: c

	a) $(a, 0)$ b) $(0, a)$ c) $(a, a)$ d) $(a, -a)$					
	ASSERTION - REASON BASED QUESTIONS					
	DIRECTIONS: In following questions, a statement of Assertion(A) is followed by a state Choose the correct option.  a) Both assertion and reason are true and the reason is the correct explanation of assertib) Both assertion and reason are true but the reason is not the correct explanation of the c) Assertion is true and the reason is false.	on.				
	d) Assertion is false and the reason is true.					
1	Assertion(A): The point $(2, 2)$ is the Solution of $x + y = 4$ . Reason(R): Every point which satisfies the linear equation is a Solution of the equation.	SOLUTION: a)				
2	Assertion(A): If $x = 2k - 1$ and $y = k$ is a Solution of the equation $3x - 5y - 7 = 0$ , then value of k is 10. Reason(R): A linear equation in two variables has infinitely many Solution.	SOLUTION: b)				
3	Assertion(A): $y = 3x$ represents a line passing through the origin. Reason(R): Any line parallel to the x-axis at a distance 'a' is $y = a$ .	SOLUTION: c)				
4	Assertion(A): If $x = -2$ , $y = 1$ is a Solution of the equation $2x + 3y = k$ , then the value of k is 7. Reason(R): The Solution of the line will satisfy the equation of the line.	SOLUTION: d)				
5	Assertion(A): An equation of the form $ax+by+c=0$ where a, b and c are real numbers. Such that a and b are not both zero, is called a linear equation in two variables. Reason(R): A linear equation in two variables has infinitely many Solution.	SOLUTION: b)				
6	Reason(R): $x = 4$ and $y = 2$ is a Solution of the linear equation $x + 3y = 10$	SOLUTION: b)				
7	Assertion(A): If $x = 4a$ and $y = a + 5$ is a Solution of the equation $3x - 5y - 7 = 0$ , then SOLUTION: d) the value of a is 10. Reason(R): A linear equation in two variables has infinitely many Solution.					
8	Assertion(A): Point $(0, -3)$ is a Solution of the equation $2x + y + 3 = 0$ . Reason(R): A point which satisfies the equation is known as Solution.	SOLUTION: a)				
9	Assertion(A): A point lies on a linear equation is known as Solution.  Reason(R): A linear equation has a unique Solution.	SOLUTION: c)				
10	Assertion(A): The intersection point of a line $y = -3$ with x-axis is $(-3, 0)$ . Reason(R): $Y = -3$ is a line parallel to x-axis at a distance of 3 unit to the negative direction of y- axis.	SOLUTION: d)				
	VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)					
1	If $(1, -2)$ is a Solution of the equation $2x - y = p$ then find the value of P. <b>SOLUTION</b> : Because $(1,2)$ is the Solution of equation $2x-y=p$ : this value of x and y will equation. ; $2x1-(-2) = p$ ; $2+2=p$ ; $P=4$	satisfy the given				
2	Find the value of k, if $x = 1$ , $y = 1$ is a Solution of the equation $2x + 3y = k$ . SOLUTION: Given equation is $2x+3y=k$ ; Now put values of x,y in the equation $\Rightarrow 2+3=$	k ; : k = 5				
	ii) Any point on the y- axis is of the form?	SOLUTION:(a, 0) SOLUTION: (0, b)				
4	i)A point which satisfies a linear equation is known? ii)A linear equation has Solution. (infinite/unique)	SOLUTION: Solution SOLUTION: infinite				
5	<ul><li>i) what is the equation of x-axis?</li><li>ii) what is the equation of y-axis</li></ul>	SOLUTION: $y = 0$ SOLUTION: $x = 0$				
6	'	SOLUTION: $y = -5$ SOLUTION: $x = 3$				

```
Find two Solution for the equations 4x + 3y = 12.
   SOLUTION: For x = 0; 4(0)+3y = 12; 3y = 12; Y = 4; For y = 0; 4x + 3(0) = 12; 4x = 12; x = 3; The two
   Solution are (0,4) and (3,0).
   Find the coordinates of the points where the graph of the equation 7x - 3y = 4 cuts x- axis and y- axis.
   SOLUTION: 3x + 4y = 12 The point on y axis; Let x = 0, so 3(0) + 4y = 12, 4y = 12, y = 3 Point is (0, 3)
   The point on x axis Let y = 0, so 3x + 4(0) = 12, 3x = 12, x = 4 Point is (4, 0)
   Write the equation 5 x = \frac{7}{2} in the form of a linear equation in two variables. Compare with ax + by + c = 0 write
   the value of a, b and c.
   SOLUTION: 5x = \frac{7}{2}; 5x \times 2=7; 10x = 7; 10x + 0.y - 7 = 0; 10x + 0.y - 7 = 0
   Compare with ax + by + c = 0; a = 10, b = 0, c = -7
10 Find the value of k, if x = 1, y = 1 is a Solution of the equation 2x + 3y = k.
   SOLUTION: Given equation is 2x+3y=k, Now put values of x,y in the equation \Rightarrow 2+3=k; \therefore k=5
   SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)
   Express the following linear equations in the form ax + by + c = 0 and indicate the values of a, b and c in each
   case: i) x - y/2 - 5 = 0 ii) 3x = -7y
   SOLUTION: i )x - y/2 - 5 = 0 ii) 3x = -7y
    2x - y - 10 = 0
    Compare with general equation ax + by + c = 0
   a = 2, b = -1, c = -10
    (ii) 3x + 7y = 0
   Compare with general equation ax + by + c = 0
   a = 3, b = 7, c = 0
   Write three Solution of the equation x = 6y
   SOLUTION: put y = 0 then x = 6 \times 0 = 0 Solution is (0, 0); put y = 1 then x = 6 \times 1 = 6 Solution is (6, 1);
   put y = -1 then x = 6 \times -1 = -6 Solution is (-6, -1); Two Solution are: (0, 0), (6, 1) and (-6, -1)
   Check which of the followings are the Solution of the given linear equation 3x - 5y = 15,
   Find
           i) (0, -3)
                          ii) (-2, 2)
                                          iii) (5, 0)
                                                         iv) (10, -3)
   SOLUTION: Equation 3x - 5y = 15
   i) (0, -3)
                      ii) (-2, 2)
                                           iii) (5, 0)
                                                                              iv) (10, 3)
   put x = 0 and y = put x = -2 and y = 2 put x = 5 and y = 0
                                                                              put x = 10 and y = 3
                      3x-2 - 5x2 = 15
                                           3x5 - 5x0 = 15
                                                                              3x10 - 5x 3 = 15
   -3
   3x0 - 5x - 3 = 15
                      -6 - 10 = 15
                                           15 - 0 = 15
                                                                              30 - 15 = 15
   0+15=15
                      -16 = 15 (False)
                                           15 = 15 (True)
                                                                              15 = 15 (True)
   15 = 15 (True)
                      Not a Solution
                                           Yes, it is a Solution.
                                                                              Yes, it is a Solution
   Yes, it is a
   Solution.
   If x = -7, y = 5 is a Solution of the equation 3x + 4y = k, find the value of k.
   SOLUTION: Equation 3x + 4y = k, Since, x = -7, y = 5 is a Solution of the above equation so it will satisfy it
    3x-7 + 4x5 = k; -21 + 20 = k; -1 = k; k = -1
   Let y varies directly as x. If y = 12 when x = 4, then write a linear equation.
    What is the value of v when x = 5
   SOLUTION: Given that, y varies as x i.e. y = kx....(i) [where k is an arbitrary constant], Given y = 12 and x = 4 (
   substituting these values in equation (i); 12 = 4k; k = 12/4; k = 3; putting the value of k in equation (i)
    y = 3x (Required linear equation); Now, when x = 5; y = 3 \times 5; y = 15
   Write 3y - 4x = 0 in the form of ax + by + c = 0. Write x in terms of y. Find any two Solution of the equation.
   How many Solution you can find out?
   SOLUTION: 3y - 4x = 0; -4x + 3y = 0 (form of ax + by + c = 0); -4x = -3y;
   x = \frac{3}{4}y (x in terms of y). For Solutions, Put y = 0 then x = \frac{3}{4} \times 0 x = 0
```

Solution (0, 0), Put y = 4 then  $x = \frac{3}{4}x + 3$ ; x = 3 Solution (3, 4) two Solutionutons are: (0, 0) and (3, 4). we can find infinitely many Solution of any linear equation.

In an test, a boy gets 4 marks for each correct answer and loose 1 marks for each incorrect answer. If he gives x correct answer, y incorrect answers and he gets 20 as total marks. Write this situation in the form of linear equation. Also, Draw the graph for obtained linear equation.

**SOLUTION**: correct answers = x; Marks for each correct

answer = 4

Incorrect answer = y ; Marks for each incorrect

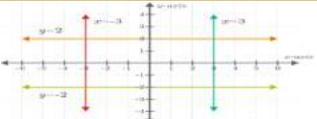

answer = -1

Total marks = 20 ; Linear equation is: 4x - y =

20

8 Draw the graph for the lines x = 3, x = -3, y = 2 and y = -2.

**SOLUTION:** 

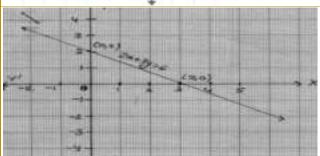

Draw the graph for the linear equation 2x + 3y = 6. Find the co-ordinate of the points where the line meet x- axis and y-axis.

**SOLUTION:** 

$$2x + 3 y = 6$$

x- axis coordinate (3, 0)

y- axis coordinate (0, 2)

- Sarita distributes chocolates on the occasion of children's Day. She gives 5 chocolates to each child and 20 chocolates to adults. If number of children is represented by 'x' and total distributed chocolates as 'y'.
  - i) write in the form linear equation in two variables.

ii) If she distributed 145 chocolates in total, find number of children?

**SOLUTION:** i) 5 x + 20 = y; ii) put y = 145 in 5 x + 20 = y, we get x = 25

## LONG ANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

A positive number is 5 times another number. If 21 is added to both the numbers, then the new larger numbers become twice the other smallest new number. What are the numbers?

**SOLUTION**: Let the first number = x

∴ the second number will be = 5 x, According to the given condition,  $2(x + 21) = (5x + 21) \Rightarrow 2x + 42 = 5x + 21 \Rightarrow 5x - 2x = 42-21 \Rightarrow 3x = 21 \Rightarrow x = 7$ 

 $\therefore$  the First number is = 7 and the second number is 5 x 7 = 35.

- The linear equation that converts Fahrenheit (F) to Celsius (C) is given by the relation  $c = \frac{5f-160}{9}$ 
  - i) If the temperature is 86°F, what is the temperature in Celsius?
  - ii) If the temperature is 35°C, what is the temperature in Fahrenheit?
  - iii) If the temperature is 0°C what is the temperature in Fahrenheit and if the temperature is 0°F, what is the temperature in Celsius?
    - iv) What is the numerical value of the temperature which is same in both the scales?

Solution: given equation is  $c = \frac{5f-160}{9}$ 

i) Now, the temperature is 86°F

: the equation 
$$c = \frac{5f-160}{9}$$
;  $c = \frac{5 \times 86-160}{9}$ ;  $c = \frac{430-160}{9}$ ;  $c = \frac{270}{9}$ ;  $c = 30^{\circ}$ 

∴ the Temperature in Celsius is 30°

ii) now, the Celsius temperature = 35°; equation  $35 = \frac{5F-160}{9}$ 

$$\Rightarrow 35x9 = 5f - 160 \Rightarrow 315 = 5f - 160 \Rightarrow 5f = 315 + 160 \Rightarrow 5f = 475 \Rightarrow f = 475/5 \ f = 95^{\circ}$$

∴ the temperature in Fahrenheit is 95°F

iii)  $\therefore$  If temperature =  $0^{\circ}$ C

by the equation 
$$0 = \frac{5f-160}{9}$$
  

$$\Rightarrow 0 = 5F - 160$$

$$\Rightarrow 5F = 160$$

$$\Rightarrow F = 160/5$$

$$\Rightarrow F = 32^{\circ}$$

Again if temp. is 0°F

by equation 
$$-\Rightarrow C = \frac{5 \times 0 - 160}{9}$$
  
 $\Rightarrow C = \frac{0 - 160}{9}$   
 $\Rightarrow C = 160/9$ 

 $\therefore$  If temp. is 0°F then in Celsius = -17.7°C

iv) Let the temp. which is same in both the scale is = xo by the equation  $x = \frac{5x - 160}{9}$ 

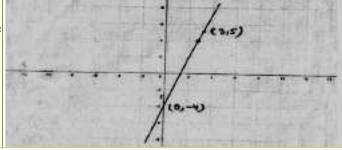

$$\Rightarrow 9x = 5x - 160 \Rightarrow 9x - 5x = -160 \Rightarrow 4x = -160 \Rightarrow X = -160/4 \Rightarrow X = -40$$

Hence, -400 is the temperature which is same in both the scales.

Draw the graph of linear equation 3x - y = 4. From the graph find the value of p and q if the graph passes through (p,-4) and (3, q)

SOLUTION: Clearly (0, -4) lies on the graph line

So, 
$$(0, -4) = (p, -4) P = 0$$
 similarly,  $(3, 5)$  lies on the line so  $q = 5$ 

4 The organizers of an essay competition decide that a winner in the competition, gets a prize, of Rs. 100 and a participant who does not win gets a prize of Rs.25. The total prize money distributed is Rs.3,000. Find the number of winners, if the total number of participants is 63.

**SOLUTION:** Let the participant who does not win = x

 $\therefore$  the participant who win = 63 – x because total number of participants = 63

ATQ, Total prize win by winners = 100 (63 - x)

Total prize obtained by who does not win 25(x)

∴ The total prize money distributed = 3000

$$25x + 100(63 - x) = 3000 \Rightarrow 25x + 6300 - 100x = 3000 \Rightarrow -75x = 3000 - 6300$$

$$\Rightarrow$$
 -75x = -3300 x =  $\frac{3300}{75}$  x = 44

∴ The total number of winners = 63 - 44 = 19

5 Write each of the following as an equation in two variables:

a) 
$$x = -5$$
 b)  $y = 2$  c)  $2x = 3$  d)  $y + 7 = 0$  e)  $5 - x = 0$ 

SOLUTION:

	0+y=2 0.x+y=2	′	0.x + 1.y + 7 = 0	e) $5 - x = 0$ -x + 5 = 0 -x + 0.y + 5 = 0
x+0.y+5 =0	0.x+y-2=0	2x+0.y-3=0		

## CASE BASED QUESTIONS (04 MARKS QUUESTIONS)

An architecture makes a layout of a house. In the given layout the design and measurements has been made such that.

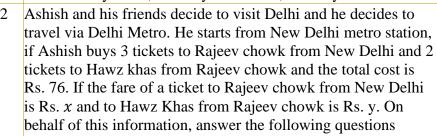

- i) Find the area of the layout.
- ii) If the area of two bedrooms and kitchen together is 75 sq. m. Represent this condition algebraically by using dimensions in the above layout.
- iii) Form a linear equation if the area of the living room is 95 sq m.

**SOLUTION:** i) Area of the layout =  $15 \times 12 = 180$  sq. m

ii) Area of two bedrooms =  $2 \times (\times 5) = 10 x$ 

Area of the kitchen = 5y; It is given that area of two bedrooms and kitchen together is 75 square m. so, 10 x + 5y = 75; 2 x + y = 15

iii) Area of the living room = 95 sq. m; 2x + 7(2 + y) = 952x + 14 + 7y = 95; 2x + 7y = 95 - 14; 2x + 7y = 81

- i) Respresnt the Ist condition algebraically.
- ii) How many Solution are there for the linear equation representing the above situation?
- iii) If the fare of 1 ticket to Rajeev chowk from New Delhi is Rs. 18. What is the fare to Hawz Khas from New Delhi via Rajeev chowk

**SOLUTION**: i) 3x + 2y = 76

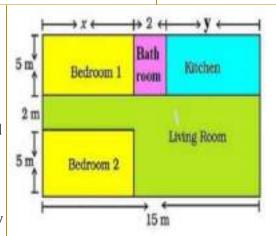

- ii) infinite many Solution
- iii) fare of 1 ticket to Rajeev chowk from New Delhi is Rs. 18 i.e. x = 18

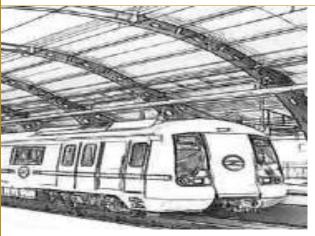

so, 
$$3 \times 18 + 2y = 76$$
;  $54 + 2y = 76$ ;  $2y = 76 - 54$ ;  $2y = 22$ ;  $y = 11$ 

Total fare = 18 + 11 = Rs. 29

- i) Form a pair of linear equations in two variables from this situation if the fixed charge is x and additional charge for each day is y.
- ii) Express the above linear equation in the form ax + by + c = 0 and indicate the values of a, b and c.
- iii) If the fixed charge is Rs.6 and the book is kept for 15 days, then what is the total amount Raj has to pay?

**SOLUTION:** i) x + y(5-3) = 30; x + 2y = 30

ii) x + 2y - 30 = 0; a = 1, b=2, c=-30

iii) 6 + 2y = 30; y = 12; Total amount  $= 6 + 12 \times 12 = \text{Rs}.150$ 

HOTS

Find the Solution of the forms x = a, y = 0 and x = 0, y = b for the following equations:

2x + 5y = 10 and 2x + 3y = 6 Is there any common Solution?

**SOLUTION:** Substituting x = 0 in the equation 2x + 5y = 10, we get  $2 \times 0 + 5y = 10$ ; 5y = 10; y = 2

Thus, x = 0 and y = 2 is a Solution of 2x + 5y = 10.

Substituting y = 0 in 2x + 5y = 10, we get  $2x + 5 \times 0 = 10 = 2x = 10 = 5$ 

Thus, x = 5 and y = 0 is a Solution of 2x + 5y = 10. Thus, x = 5, y = 0 and x = 0, y = 2 are two Solution of 2x + 5y = 10.

Consider the equation 2x + 3y = 6. Substituting x = 0, in this equation, we get 2x0+3y=6; 3y=6; => y = 2;

So, x = 0, y = 2 is a Solution of 2x + 3y = 6

Substituting y = 0 in 2x+3y = 6, we get  $2x + 3 \times 0 = 6$ ; 2x = 6; X = 3; Thus, x = 0, y = 2 and x = 3, y = 0 are solution of 2x+3y=6, Clearly, x = 0, y = 2 is common Solution of the given equations.

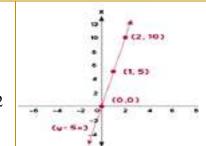

If the work done by a body on application of a constant force is directly proportional to the distance travelled by the body, express this in the form of an equation in two variables and draw the graph of the same by taking the constant force as 5 units. Also, read from the graph the work done when the distance travelled by the body is (i) 2 units (ii) 0 units.

**SOLUTION:** Consider y as work done and x as distance travelled by the body

y = Cx, where C is a constant, It is given that the constant force is of 5 units, C = 5; Putting C = 5 in y = Cx, we get y = 5x This is the required equation in two variables. Putting x=0 in (i), we get y = 0; Putting x=1 in (i), we get y=5.

Thus, we have the following table exhibiting the values of y for different

values of x. Plotting points O(0,0) and A (1,5)paper on a suitable scale and drawing a line passing through these two points, we obtain the graph of y = 5x as shown In order to find the work done in travelling 2 units distance, we first identify point A representing 2 units on X-axis and then draw a vertical line to cut y = 5x at P. From P draw perpendicular PM on Y-axis. Clearly, M represents (0,10). Hence, work done in travelling 2 units is 10 units.

38

ii)Clearly, y = 0 when x = 0 so, work done is zero when no distance is travelled.

**EXERCISE** 

MULTIPLE CHOICE TYPE QUESTIONS

3x + 10 = 0 will have

a) Unique Solution b) Two Solution c) infinitely many Solution d)No Solution

The cost of ball pen (y) is Rs. 10 less than half of the cost of fountain pen(x). The linear equation in two variable will be .....

a) x+y+10=0

b)2x+y+20=0

c)2x-y+20=0

d) x-2y-20 = 0

The Solution of equation x - 2y = 4 is

a) (0,2)

b) (2,0)

c) (4,0)

d) (1,1)

Which option shows 5y - 8x = 7(x + y) - 9 expressed in the form of ax + by + c = 0?

a) -x + 6y - 9 = 0

b) -x + 12y - 9 = 0 c) 15x + 2y - 9 = 0 d) 15x - 4y - 9 = 0

In an exhibition, the cost of tickets for an adult is Rs.5 more than thrice the cost of a ticket for child. Which equation relates the cost y, of adult tickets in terms of the cost x, of child tickets?

a) y = 5 + 3x

b) y + 5 = 3x

c) y = 3 + 5x

d) y + 3 = 5x

ASSERTION REASON QUESTIONS

Assertion(A): A linear equation 5x - 3y = 2 has only (1,1) as a Solution.

Reason(R): A linear equation in two variables has infinitely many Solution.

Assertion(A): The point (2, 2) is the Solution of x + y = 4.

- Reason(R): Every point which satisfy the linear equation is a Solution of the equation.
- Assertion(A): If x = 2, y = 1 is a Solution of the equation 2x + 3y = k, then the value of k is 7. Reason(R): The Solution of the line will satisfy the equation of the line.
- Assertion(A): The graph of the linear equation 2x y = 1 passes through the point (2, 3). Reason(R): Every point lying on graph is not a Solution of 2x y = 1.
- Assertion(A): The point (3, 0) lies on the graph of the linear equation 4x + 3y = 12. Reason(R): (3, 0) satisfies the equation 4x + 3y = 12.

#### VERY SHORT ANSWER TYPE QUESTIONS

- 1 The equation of a line parallel to x-axis is.....=a, where a is any non-zero real number.
- The equation of a line parallel to y-axis is.....=a, where a is any non-zero real number.
- The graph of every linear equation in two variables is a ......
- The linear equation 7x + 9y = 8 has a unique Solution. (True/False)
- The graph of the linear equation x + 2y = 5 passes through the point (0, 5). (True/False)

#### SHORT ANSWER TYPE QUESTIONS

- Find the value of P if x = 2, y = 3 is a Solution of equation 5x + 3Py = 55.
- The cost of coloured paper is 7 more than 1/3 of the cost of white paper. Write this statements in linear equation in two variables.
- Write the equations of two lines passing through (3, 10).
- If the points A(3, 5) and B(1, 4) lies on the graph of line ax + by = 7, find the value of a.
- Determine the point on the graph of the equation 2x + 5y = 20 whose x-coordinate is 5/2 times its ordinate.

#### LONG ANSWER TYPE QUESTIONS

- Draw the graph of equation x + y = 5. Also, find the area bounded by line and coordinate axes.
- Sarika distributes chocolates on the occasion of children's Day. She gives 5 chocolates to each child and 20 chocolates to adults. If number of children is represented by 'x' and total distributed chocolates as 'y'. Write it in the form of linear equation in two variables. If she distributed 145 chocolates in total, find number of children?
- Riya participates in Diwali Mela with her friends for the charity to centre of handicapped children. They donate ₹3600 to the centre from the amount earned in Mela. If each girl donates ₹150 and each boy donates ₹200, they Form the linear equation in two variables. If number of girls are 8, find number of boys.
- We know that C= 2 T, taking T=22/7, circumference as j units, radius as x units, form a linear equation. Draw the graph. Check whether the graph passes through (0, 0). From the graph read the circumference when radius is 2.8 units.
- 5 Find five Solution of the line y = x.

### CASE BASED QUESTIONS

- Rajan planned to celebrate his daughter's birthday in a small orphanage centre. He bought apples to give to children and adults working there. Rajan donated 3 apples to each children and 4 apples to each adult working there along with birthday cake. He distributed 100 total apples.
  - i) How to represent the above situation in linear equations in two variables by taking the number of children as 'x' and the number of adults as 'y'?
  - ii) If the number of children is 20, then find the number of adults
  - iii) Find the value of b, if x = 9, y = 10 is a Solution of the equation 3x + 5y = 11b

- Petrol is flowing into a tank at the rate of 25cm³/sec. The volume of petrol collected in x sec is y cm³
  - i) Represent the above situation in linear equations in two variables.
  - ii) Express the above linear equation in the form ax + by + c = 0

and indicate the values of a, b and c.

- iii) Find the volume of the petrol after 4 seconds.
- OR After how many seconds the volume is 500cm<sup>3</sup>.
- 3 Shikhar went for shopping in the evening by metro with his father who is expert in mathematics. He told Shikhar the path of the metro A is given by the equation 2x + 4y = 8 and Path of metro B is given by 3x + 6y = 18. His father put some equation to Shikhar.

Help Shikhar to Solve the problem:

- i) What is the intersection points of the equation 2x + 4y = 8 with coordinate axes?
- ii) What is the intersection points of the equation 3x + 6y = 18 with coordinate axes?
- iii) What is the intersection point of these equation?

## Нотѕ

- Draw the graphs of the linear equations 4x 3y + 4 = 0 and 4x + 3y 20 = 0. Find the intersection point and area bounded by these lines and x –axis.
- Aarushi was driving a car with uniform speed 60km/h. Draw distance- time graph. From the graph, find the distance travelled by Aarushi in i)  $2\frac{1}{2}$  hours ii)  $\frac{1}{2}$ hours

# CHAPTER 5 INTRODUCTION TO EUCLID'S GEOMETRY

#### MIND MAPPING

## Euclid's geometry

#### Axioms

Assumptions used in general mathmetics not generally linked to geometry

- 1. Things which are equal to the same things are equal to one another.
- 2. If equals are added to equals, then wholes are equal.
- 3. If equals are subtracted from equals, then remainders are equal.
- 4. Things which coincide with one another are equal to one another.
- 5. The whole is greater than the part.
- 6. Things which are double of the same things are equal to one another.
- 7. Things which are halves of the same things are equal to one another

#### **Postulates**

assumptions which are specific to geometry

- 1. A straight line may be drawn from one point to any other point.
- 2. A terminated line can be produced indefinitely.
- 3. A circle can be drawn with any centre and any radius.
- 4. All right angles are equal to one another.
- 5. If a straight line falling on two straight makes the interior angles on the same side of it taken together less than two right angles, then the two straight lines, if produced indefinitely, meet on that side on which the sum of the angles is less than two right angles.

#### GIST/SUMMARY OF THE LESSON

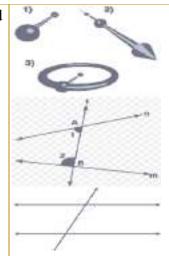

- The word 'geometry' comes from the Greek words 'geo', meaning the 'earth', and 'metrein', meaning 'to measure'.
- Geometry originated from the need for measuring land.
- Euclid, the Greek mathematician is called the Father of Geometry.
- Euclid collected all the known works in his time and created his famous treatise "Elements". He divided the 'Elements' into thirteen chapters, each called a book.

#### EUCLID'S DEFINITIONS

- A point is that which has no part.
- O A line is a breadthless length.
- o The ends of a line are points.
- A straight line is a line which lies evenly with the points on itself.
- o A surface is that which has length and breadth only.
- o The edges of a surface are lines.
- o A plane surface is a surface which lies evenly with the straight lines on itself.

#### • Undefined Terms:

- o In geometry, a point, a line and a plane (in Euclid's words, a plane surface) are
- considered as undefined terms.
- Though Euclid defined a point, a line and a plane, the definitions are not accepted by mathematicians. Therefore, these terms are now taken as undefined.
- Axioms and postulates are the assumptions which are obvious universal truth. They are not proved. Example Sun rises in the east and sets in the west is a

universal truth. Postulates are the assumptions which are specific to geometry whereas axioms are the assumptions used throughout mathematics and not specifically linked to geometry.

Theorems are the statements which are proved using definitions, axioms,

#### EUCLID'S AXIOMS

■ Things which are equal to the same things are equal to one another. Example: if A=5 and B= 5, then A=B

If equals are added to equals, then wholes are equal. Example: if A=B and C=D then A+C = B+D

If equals are subtracted from equals, then remainders are equal.
 Example: if A=B and C=D then A-C = B-D

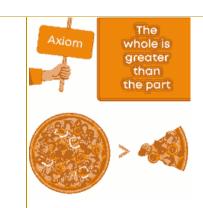

previously proved statements and deductive reasoning.

Things which coincide with one another are equal to one another. Example: if you place one square exactly over another and they match perfectly, they are equal in shape and size.

The whole is greater than the part
 Example: A full pizza is bigger than just one slice of it.

Things which are double of the same things are equal to one another. Example: if two sticks are each twice as long as a 5cm stick, they are both 10cm and so are equal.

Things which are halves of the same things are equal to one another. Example: if two pieces of chocolate are each half of a 100g bar, they both are 50g and equal.

#### **EUCLID'S POSTULATES**

Postulate 1. A straight line may be drawn from one point to any other point.

Postulate 2. A terminated line can be produced indefinitely.

Postulate 3. A circle can be drawn with any centre and any radius.

Postulate 4. All right angles are equal to one another.

Postulate 5. If a straight line falling on two straight falling on two straight lines makes the interior angles on the same side of it taken together less than two right angles, then the two straight lines, if produced indefinitely, meet on that side on which the sum of the angles is less than two right angles.

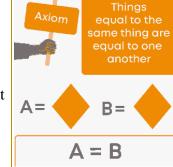

Two equivalent version of fifth postulate are:

For every line I and for every point P not lying on I, there exists a unique line m passing through P and parallel to I. Two distinct intersecting lines cannot be parallel to the same line. Theorem

STATETMENT: Two distinct lines cannot have more than one point in common. Given: Two lines I and m.

To prove: Lines I and m cannot have more than one point in common Proof: Let us suppose that the two lines intersect in two distinct points, say P and Q. Now there are two lines passing through two distinct points P and Q. But this contradicts the axiom that only one line can pass through two distinct points.

So, the assumption that we started with, that two lines can pass through two distinct points is incorrect. From this, we conclude that two distinct lines cannot have more than one point in common.

## MULTIPLE CHOICE QUESTIONS (1 MARKS QUESTIONS)

What does the Greek word 'Geo' mean?

a)Line

B) Earth

C) Point

D) Ground

ANSWER:B)Earth

ANSWER:A) points

ANSWER:A) points

B) edges

C) dimensions

D) surfaces

3	The assumptions which are specific to Geometry are called as:	ANSWER :B) Postulates	
	a)Definitions B) Postulates C) Elements D) Axioms		
4	Euclid stated that 'all right angles are equal to each other' in the form of	ANSWER :C) a postulate	
	A) an axiom B) a definition C) a postulate D) a proof		
5	How many lines can pass through a given point?	ANSWER : A) Infinitely	
	A) Infinitely many B) Only 1 C) 2 D) 4	many	
6	Euclid collected all the known work in geometry and arranged in his famous treatise	ANSWER :D) Elements	
	called	Explanation: By	
	A) Axioms B) Postulates C) Definitions D) Elements	Euclid's axiom	
7	If a point A lies between points B and C, then	ANSWER :d) $BC + AC =$	
	A) $AC = 2 BC$ B) $AC = BC$ C) $AC = \frac{1}{2} BC d$ D) $BC + AC = AB$	AB	
8	4 Things which coincide with one another are equal to one another. A proved statement	ANSWER :b) Theorem	
	is called:		
	a) Definition b) Theorem c) Proposition d) Both (b) and (c)		
9	A pyramid is a solid shape, the base of which is	ANSWER :b) square	
	a) a triangle b) a square c) a rectangle d) a polygon		
10	How many lines can pass through 2 distinct points?	ANSWER:b) Only 1	
	a) Infinite b) Only 1 c) 2 d) 4		
	ASSERTION REASON BASED QUESTION		
	In the following questions, a statement of ASSERTION is followed by a statement of F	REASON . Choose the	
	correct option from the following:		
	(A) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation	on of Assertion(A)	
	(B) Both Assertion (A) and Reason (R) are true and Reason (R) is not the correct explanation	nation of Assertion (A)	
	(C) Assertion (A) is true but Reason (R) is false.		
	(D) Assertion (A) is false but Reason (R) is true.		
1	Assertion: There can be infinite number of lines that can be drawn through a single	Answer :(B)	
	point. Reason: Lines are made up of infinite number of points.		
2	Assertion: Through two distinct points, only one line can be drawn.	Answer: (B)	
	Reason: A line is formed by the joining only 2 points.		
3	Assertion: If $AB = PQ$ and $PQ = XY$ , then $AB = XY$ .	Answer :(A)	
	Reason: Things which are equal to the same thing are equal to one another.		
4	Assertion: If two circles are equal, then their radii are equal.	Answer :(A)	
	Reason: Congruent circles have equal radii.		
5	Assertion: Parallel lines are those lines which never intersect each other.	Answer :(B)	
	Reason: Parallel lines can be two or more lines.		
6	Assertion: A dimensionless dot which is drawn on a plane surface is known as point.	Answer: (B)	
	Reason: A point is that which has no part.		
7	Assertion: A line segment cannot be extended from both sides.	Answer :(B)	
	Reason: A collection of points that has only length and no breadth is known as a line.		
8	Assertion: A line can be extended on both sides.	Answer :(A)	
	Reason: According to Euclid's second postulate, a terminated line can be produced		
	indefinitely .		
9	Assertion: An apple weighs 125 g but a part of it weighs more than 125 g.	Answer :(D)	
	Reason: The whole is always greater than the part.		
10	Assertion: Axioms are universal truths.	Answer :(C)	
	Reason: Euclid stated only 6 axioms in his book "Elements".		
	VERY SHORT ANWER TYPE QUESTIONS (2 MARKS)		
1	Leath of France A.C. D.D. Drove that A.D. D.C.		
	In the figure, $AC = BD$ . Prove that $AD = BC$ .		
	<b>SOLUTION:</b> $AC = BD : AC + CD = BD + CD$ (equals added to equals)	В С D	

2	In the given figure, $PT = RT$ and $TQ = TS$ , show that $PQ = RS$ . <b>SOLUTION:</b> $PT = RT$ (1); $TQ = TS$ (2); Adding (1) and (2) PT + TQ = RT + TS (equals are added to equals whole are equal) So, $PQ = RS$ hence proved	P S
3	If point C be the mid-point of a line segment AB, then write the relation between AC, BC and AB, with a suitable figure.  SOLUTION: Relation: AC + CB = AB	4
4	Define perpendicular lines. Are there any other words that need to be defined first?  SOLUTION: Two lines which intersect at right angles Words that need to be defined: line, intersect, right angle	
5	In the figure, $\angle 1 = \angle 2$ and $\angle 2 = \angle 3$ , show that $\angle 1 = \angle 3$ . Give reason. <b>SOLUTION</b> : Given $\angle 1 = \angle 2$ and $\angle 2 = \angle 3$ So, $\angle 1 = \angle 3$ (Things which are equal to the same thing are equal to one another)	^ =
6	Write any two Euclid's postulate.  SOLUTION: 1. A circle can be drawn with any centre and any radius.  2. All right angles are equal to one another.	
7	Prove that an equilateral triangle can be constructed on any given line segment. <b>SOLUTION</b> : Given: line segment AB of any length. Draw an arc with point A as the centre and AB as the radius. Similarly, draw an arc with point B as the centre and BA as the radius. The two arcs meet at a point, say C. Draw the line segments AC and BC to form $\triangle$ ABC. Now, AB = AC (equal radii ).; Also, AB = BC (equal radii) By Euclid's axiom, things which are equal to the same thing are equal to one another Then AB = BC = AC. So, $\triangle$ ABC is an equilateral triangle	C B
8	What is a consistent system of axioms?  SOLUTION: A system of axioms is said to be consistent, if it is impossible to deduce from these axioms a statement that contradicts any axiom or previously proved statement.	
9	In the Fig, if $\angle 1 = \angle 3$ , $\angle 2 = \angle 4$ and $\angle 3 = \angle 4$ , write the relation between $\angle 1$ and $\angle 2$ , using an Euclid's axiom. <b>SOLUTION</b> : Given $\angle 1 = \angle 3$ (1)  , $\angle 2 = \angle 4$ (2) $\angle 3 = \angle 4$ (3)  From (1),(2) and (3) $\angle 1 = \angle 2$ (Things which are equal to the same things are equal to one another.)	
10	In the Fig, we have $BX = \frac{1}{2} AB$ , $BY = \frac{1}{2} BC$ and $AB = BC$ . Show that $BX = BY$ . <b>SOLUTION</b> : Given $BX = \frac{1}{2} AB$ , (1); $BY = \frac{1}{2} BC$ (2); $BX = BY$ . (3); To Prove $BX = BY$ ; Proof From (1), (2) and (3) $BX = BY$ (Things which are equal to the same things are equal to one another.) <b>SHORT ANSWER TYPE QUESTIONS</b> (3 MARKS)	***
1	Read the following statement: "A square is a polygon made up of four line se three line segments are equal to the length of fourth one and all its angles are	

Define the terms used in this definition which you feel necessary. Are there any undefined terms in this? Can you justify that all angles and sides of a square are equal?

**SOLUTION**: The terms need to be defined are:

LINE: Undefined term Point POLYGON: A simple closed figure made up of three or more line segments.

POINT: Undefined term; LINE SEGMENT: Part of a line with two end points.

RAY: Part of a line with one end point RIGHT ANGLE: Angle whose measure is 90

ANGLE: A figure formed by two rays with a common initial point.

Undefined terms used are: line, point.

Euclid's fourth postulate says that "all right angles are equal to one another."

In a square, all angles are right angles, therefore, all angles are equal (From Euclid's fourth postulate).

Three line segments are equal to fourth line segment (Given). Therefore, all the four sides of a square are equal.

(by Euclid's first axiom "things which are equal to the same thing are equal to one another.")

**SOLUTION**: Given AC= BC

AC+BC = AB (Things which coincide with one another are equal to one another.)

AC +AC =AB (AC =BC Given); 2AC = AB;  $AC = \frac{1}{2}AB$ .

**SOLUTION** Let us consider AB has two mid point C and D

So AC = BC(1) AD = BD(2); Subtracting (1) from (2)

AD - AC = BD - BC ; CD = -CD ; 2CD = 0CD = 0

So the distance between C and D is 0, i.e C and D coincides.

Thus every line has one and only one mid point.

**SOLUTION**: Given AC = BD

AC - BC = BD - BC (equals subtracted from equals remainder are equals)

AB = CD

SOLUTION Axiom 5 says "whole is greater than the part" A part is always smaller than the whole thing. It is a universal truth which cannot be changed.

**SOLUTION**: AB = 2AC (C is the mid-point of AB)

XY = 2XD (D is the mid-point of XY)

Also, AC = XD (Given)

Therefore, AB = XY, because things which are double of the same things are equal to one another.

Solve the equation a - 15 = 25 and state which axiom do you use here.

**SOLUTION**: : a - 15 = 25. On adding 15 to both sides, we have a - 15 + 15 = 25 + 15 = 40 (If equals are added to equals, then wholes are equal).

Ram and Ravi have the same weight. If they each gain weight by 2 kg, how will their new weights be compared?

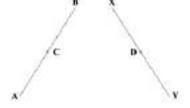

**SOLUTION**: Let x kg be the weight each of Ram and Ravi. On gaining 2 kg, weight of Ram and Ravi will be (x + 2) each. According to Euclid's second axiom, when equals are added to equals, the wholes are equal. So, weight of Ram and Ravi are again equal.

Pook at the Fig. Show that length AH > sum of lengths of AB + BC + CD.

**SOLUTION**: AB + BC + CD = AD

AD is a part of AH( Whole is always greater than part)

Therefore, AH > AD

AH > AB + BC + CD.

10 In the Fig, we have  $\angle ABC = \angle ACB$ ,  $\angle 3 = \angle 4$ . Show that  $\angle 1 = \angle 2$ .

**SOLUTION**: Given  $\angle ABC = \angle ACB$ 

 $\angle 1+ \angle 3 = \angle 2+ \angle 4$  (things coincide with one another are equal to one another)

 $\angle 1 + \angle 3 = \angle 2 + \angle 3$  ( $\angle 3 = \angle 4$  given)

 $\angle 1 = \angle 2 + \angle 3 - \angle 3 \angle 1 = \angle 2$ .

Discuss the contribution of Euclid to the development of geometry. How is his approach still relevant in modern mathematics?

**EXPECTED RESPONSE:** Brief biography of Euclid, Introduction to his book Elements, Description of axiomatic method, Influence on geometry in classrooms and logical structure in mathematics, Mention of other geometries that built upon or diverged from his model

How did the questioning of Euclid's Fifth Postulate lead to the birth of non-Euclidean geometry? Explain with examples.

**EXPECTED RESPONSE:** State Euclid's 5th postulate, Explain why it was seen as complicated and hard to prove from the others, Development of new geometries like Spherical geometry (no parallel lines), Hyperbolic geometry (many lines parallel), Importance in modern fields like relativity theory and cosmology

State and explain any four Euclid's axioms. Give one example for each to show how they are used in geometry. **EXPECTED RESPONSE:** State four axioms (e.g., "Things which are equal to the same thing are equal to one another."), Explain each in your own words, Provide geometric or numerical examples, Include a small diagram if applicable

## CASE BASED QUESTIONS

In a trip to a museum in Delhi, students observed that one of the halls is not a rectangle. They imagined that if the edges of the hall's floor are extended it will appear as lines exhibited in Euclid's 5th postulate. Later on the way back to school, they discussed Euclid's other axioms and postulates with their teacher. Next day they had a revision class in school where teacher asked them following questions:

? State the first postulate of Euclid.

Ans: A straight line may be drawn from one point to any other point.

? If PQ = QR and QR = RP, then PQ = RP. Identify the axiom used in this.

Ans: Things which are equal to the same thing are equal to one another.

? State Euclid's 5th postulate with a figure

Ans: If a straight line falling on two straight lines makes the interior angles on the same side of it taken together less than two right angles, then the two straight lines, if produced indefinitely, meet on that side on which the sum of the angles is less than two right angles.

? OR Does Euclid's 5th postulate imply the existence of parallel lines? Explain.

Ans: Yes, if the two straight lines make the interior angles on the same side of it taken together as equal to two right angles, then the two straight lines will never meet and will be parallel.

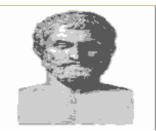

A National Public School organised an education trip to a museum. Almost all the students of class IX went to the trip with their teacher of Mathematics.

A B C D E F G H

They saw many pictures of mathematicians and read about their contributions in the field of Mathematics. After visiting the museum, teacher asked the following questions from the students. On the basis of the above information, solve the following questions:

? Who is the teacher of Pythaoras?

ANS: Thales

? Name of the mathematician who is visible in the last picture.

ANS: Thales

? State any two Euclid's postulate

ANS: A circle can be drawn with any centre and any radius

All right angles are equal to one another.

? OR Define Axioms, postulates and Theorem

Axiom- Assumptions used in general mathmetics not generally linked to geometry

Postulate - assumptions which are specific to geometry

Theorem - Theorems are the statements which are proved using definitions, axioms, previously proved statements and deductive reasoning.

- Rohan, a student of class 9th learnt that Labour day is celebrated on May 1st. He learnt the importance of house help and how everyone should respect each other's work. Rohan's maid has 2 children. Both of them have equal number of dresses. So Rohan, on his birthday, plans to give both of them same number of dresses
  - ? If the children had x dresses each and Rohan gifts them 2 dresses, then how many dresses will each child have after Rohan's birthday?

**Ans:** Each child have after Rohan's birthday (x+2)

? Will the children have equal number of dresses after Rohan's birthday? Which Euclid's axiom is used here?

ANS: Yes, if equals are added to equals whole are equal.

? If p + q = 7, then p + q - r = 7 - r. Is any axiom used here? If yes, state the axiom.

ANS: Yes, if equals are subtracted from equals remainders are equal.

? OR If  $\angle 1 = \angle 2$ , then  $2\angle 1 = 2\angle 2$ . Is any axiom used here? If yes, state the axiom

**ANS** Yes, Things which are double of the same things are equal to one another.

#### HOTS

Euclid assumes that "a point is that which has no part." If a point has no size, how can it exists on a line or plane? Is this concept purely theoretical or does it have real world application?

**SOLUTION**: In mathematics, a point is a conceptual tool an abstract idea to denote location only, not physical size. Though it has no dimensions, it is defined to exist as a precise position in space. In a real world application (like graphs or blueprints) we represent points visually, but in theory they remain dimensionless. This abstraction is vital for constructing accurate models.

### EXERCISE

#### MULTIPLE CHOICE QUESTIONS

1 The side faces of a pyramid are:

(A) Triangles

(B) Squares

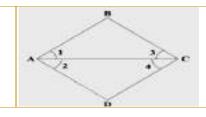

(C) Polygons

(D) Trapeziums

Which of the following needs a proof? (A) Theorem (B) Axiom (C) Definition (D) Postulate 'Lines are parallel if they do not intersect' is stated in the form of 3 (A) an axiom (B) a definition (C) a postulate (D) a proof Observe the figure shown. A student claimed that the lines when extended meet at a point which lies on the left of the line c. Given that the student's claim is true, which of these justifies the claim? (a)  $p + q < 180^{\circ}$ (b)  $p + r < 180^{\circ}$ (c)  $r + s < 180^{\circ}$ (d)  $s + q < 180^{\circ}$ Two quantities P and Q are such that P = Q. Which of these equations illustrates the Euclid's axiom "If equals are added to equals, the wholes are equals"? (a) P + x = Q - x (b) P + x = Q + x (c) P + x = Q (d)  $P \times x = Q$ ASSERTION AND REASON OUESTIONS In the following questions, a statement of assertion (A) is followed by a statement of Reason (R). Choose the Answer :out of the following choices. (a) Both A and R are true and R is the correct explanation of A. (b) Both A and R are true but R is not the correct explanation of A. (c) A is true but R is false. (d) A is false but R is true. Assertion (A): If AB = MN and MN = PQ, then AB = PQ. Reason (R): According to the Euclid's first axiom, 'Things which are equal to the same thing are also equal to one another'. Assertion (A): If Rita and Reena are of same age that is 10 years then after 6 years also they will have the same Reason (R): According to Euclid's Axiom, when equals are subtracted from equals, remainders are equal. Assertion (A): A cake when it is whole, assume it measures 2kg but when a slice is taken out of it and measured, its weight will be smaller than the previous one Reason (R): According to Euclid's Axiom, whole is always greater than the part. Assertion (A): Euclid's fifth postulate implies the existence of parallel lines. Reason (R): the sum of interior angles will be equal to the sum of two right angles then two lines will meet each other on either sides and therefore they will be parallel to each other. Assertion (A): an infinite number of lines can be drawn to pass through a given point. Reason (R): A line segment has only two end points. VERY SHORT ANSWER TYPE QUESTION (2MARKS) In the given figure, we have  $\angle 1 = \angle 2$ ,  $\angle 3 = \angle 4$ . Show that  $\angle$  ABC =  $\angle$  DBC. State the Euclid's axiom used. In the Fig., we have AB = BC, BX = BY. Show that AX = CY. Two salesmen make equal sales during the month of August. In September, each salesman doubles his sale of the month of August. Compare their sales in September.

It is known that x + y = 10 and that x = z. Show that z + y = 10?

In the Fig, we have  $\angle 1 = \angle 2 = \angle 3$  Show that  $\angle 1 = \angle 3$ .

## SHORT ANSWER TYPE QUESTIONS (3 MARKS)

- 1 In the Fig.
  - (i)AB = BC, M is the mid-point of AB and N is the mid-point of BC. Show that AM = NC.
  - (ii) BM = BN, M is the mid-point of AB and N is the mid-point of BC. Show that AB = BC.

- Read the following statement: An equilateral triangle is a polygon made up of three line segments out of which two line segments are equal to the third one and all its angles are 60° each. Define the terms used in this definition which you feel necessary. Are there any undefined terms in this? Can you justify that all sides and all angles are equal in a equilateral triangle.
- Read the following two statements which are taken as axioms:
  - (1)If two line intersect each other, then the vertically opposite angles are not equal.
  - (2)If a ray stands on a line, then the sum of two adjacent angles so formed is equal to 180°. Is this system of axioms consistent? Justify your answer.
- In the Fig, we have AC = DC, CB = CE. Show that AB = DE.

In the Fig., if  $OX = \frac{1}{2}XY$  and  $PX = \frac{1}{2}XZ$  and OX = PX, show that XY = XZ.

## LONG ANSWER TYPE (5 MARKS)

- 1 Write Euclid 5th postulate and its equivalent version and explain with figure.
- 2 Write all Euclid postulate explain any one postulate with figure.
- What is the difference between axiom, postulate and theorem give two examples of each.
- What are undefined terms? Give examples
- 5 State and explain the significance of Euclid's fifth postulate. How did it lead to the development of other geometries?

## HOTS

Euclid's fifth postulate states that if a straight line falling on two straight lines makes the interior angles on the same side less than two right angles, then the two lines will meet. Can you explain why this postulate is necessary and not derivable from the first four? What would geometry look like without it?

## CASE BASED QUESTIONS(4 MARKS)

- In last year, cyclone comes out in Andhra Pradesh. Due to this cyclone, many persons lost their lives and property. Deepak and Rohit decided to contribute equal amounts to National Disaster Relief Fund, so that the suffered person get some relief.
  - (a) In this process, which axiom is used. Also write their statement.
  - (b) If Deepak contributed ₹30,000, then how much contribution is done by Rohit?
  - (c) In the given figure,

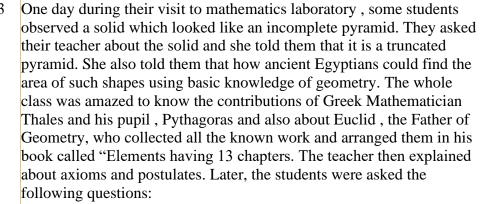

if PR = QS, then prove that PQ = RS.

OR Prove that every line has one and only one mid-point.

- Rahul has a fantasy of collecting the old stamp. So, one day he went to collect old stamps from two different market stores of the Indira Nagar market. So, Rahul decides to take three from each store.
  - (a) It is known that a + b = 20 and a = c. Show that c + b = 20.
  - (b) How many stamps remain with each store after Rahul's purchase?
  - (c) Solve the equation y + 12 = 15 and state the Euclid axiom used here. OR State any two Euclid's axiom.

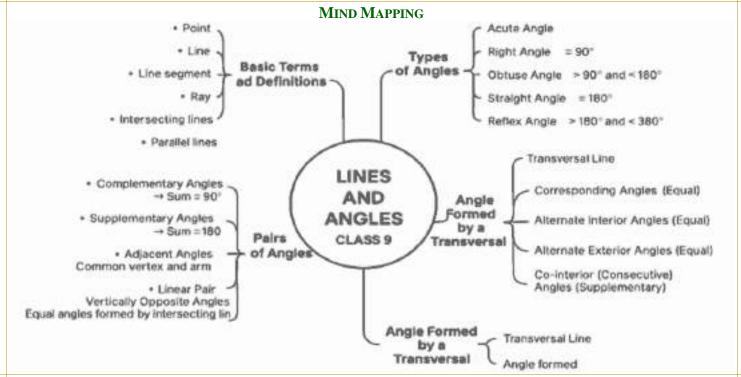

- a) Name the shape that forms the base of a pyramid.
- b) Name the famous book of Euclid and the number of chapters it has.
- c) What is an axiom? State any one axiom.
- OR What is an Postulate? State any one Postulate

	of what is all I obtained. State any one I obtained

## CHAPTER - 6 LINES AND ANGLES

### GIST/SUMMARY OF THE LESSON:

#### **GIST OF THE CHAPTER: -**

- Basic Definitions
- Types of Angles
- Types of Pairs of Angles
- Important Angle Properties
- Parallel Lines and a Transversal
- Axioms and Theorems

#### **DEFINITIONS AND FORMULAE:**

#### BASIC DEFINITIONS:

- Line: Extends indefinitely in both directions.
- Line segment: A part of a line with two endpoints.
- Ray: A part of a line that starts at one point and goes on forever
- Angle: Formed when two rays meet at a point.

#### **TYPES OF ANGLES:**

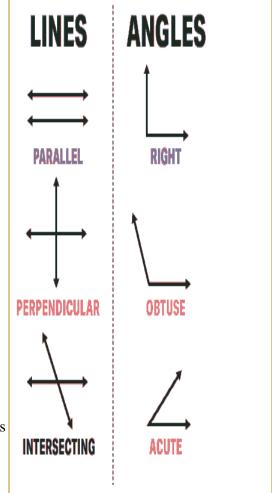

- Acute Angle:  $< 90^{\circ}$  Right Angle:  $= 90^{\circ}$
- Obtuse Angle:  $> 90^{\circ}$  and  $< 180^{\circ}$
- Straight Angle: =  $180^{\circ}$
- Reflex Angle:  $> 180^{\circ}$  and  $< 360^{\circ}$

#### TYPES OF PAIRS OF ANGLES:

- Complementary Angles: Sum =  $90^{\circ}$
- Supplementary Angles: Sum = 180°
- Adjacent Angles: Share a common arm and vertex.
- Linear Pair: Adjacent angles on a straight line (sum = 180°).
- Vertically Opposite Angles: Equal angles formed when two lines intersect.

#### IMPORTANT ANGLE PROPERTIES:

- Linear pair angles are supplementary.
- Vertically opposite angles are equal.
- If two lines intersect, opposite angles are equal.

#### MULTIPLE CHOICE QUESTIONS (01 MARK QUESTIONS) Intersecting lines cut each other at: d) Null a) One point b) Two points c) Three points ANSWER: (a) Explanation: Two lines always intersect each other at one point. Two parallel lines intersect at: a) One point b) Two points c) Three points d) Null Answer: (d), Explanation: If two lines are parallel to each other, they don't intersect each other. They meet each other at infinity. If AB $\parallel$ CD, EF $\perp$ CD and $\angle$ GED = 135° as per the figure given below. ₿. A G The value of ∠AGE is: a) 120° b) 140° c) 90° d) 135° ANSWER: (d) Explanation: Since AB || CD and GE is a transversal. Given, $\angle GED = 135^{\circ}$ , Hence, $\angle GED = \angle AGE = 135^{\circ}$ (Alternate interior angles) 4. If two lines intersect each other, then the vertically opposite angles are: ANSWER: (a) a) Equal b) Unequal c) Cannot be determined d) None of the above 5. A line joining two endpoints are called: ANSWER (a) a) Line segment b) A ray c) Parallel lines d) Intersecting lines An acute angle is: ANSWER (b) a) More than 90 $^{\circ}$ b) Less than 90 $^{\circ}$ c) Equal to 90 degrees d) Equal to 180 $^{\circ}$ A reflex angle is: ANSWER (c) a) More than 90 degrees b) Equal to 90 degrees c) More than 180 degrees d) Equal to 180 degrees A straight angle is equal to: ANSWER (c) a) 0° b) 90° c) 180° d) 360° Two angles whose sum is equal to 180° are called: ANSWER (d) a) Vertically opposite angles b) Complementary angles c) Adjacent angles d) Supplementary angles 10 In the figure below, which of the following are corresponding angle pairs: a) $\angle p$ and $\angle q$ b) $\angle p$ and $\angle w$ c) $\angle p$ and $\angle x$ d) $\angle p$ and $\angle z$ ANSWER (b) ASSERTION - REASON BASED QUESTIONS In the following questions, a statement of Assertion (A) is followed by a statement of Reason(R). Pick the correct option: Both Assertion (A) and Reason(R) are true and Reason(R) is the correct explanation of Assertion (A). Both Assertion (A) and Reason(R) are true but Reason(R) is NOT the correct explanation of Assertion (A). Assertion (A) is true but Reason(R) is false. Assertion (A) is false but Reason(R) is true. Assertion (A): In a figure, x = y and a = b. then line $1 \parallel n$ . Reason(R) If a transversal intersects two lines in such a way that a pair of corresponding angles are equal, then the two lines are parallel. ANSWER. (a)x = y (Given) ,Therefore, $1 \parallel m$ (Corresponding angles) (i) Also, a = b (Given) ,Therefore, $n \parallel m$ (Corresponding angles) (ii) From (i) and (ii), $1 \parallel n$ (Lines parallel to the same line). Assertion (A): Sum of the pair of angles 120° and 60° is supplementary.

Reason(R) Two angles, the sum of whose measures is 180°, are called supplementary angles.

ANSWER: (a)

Assertion (A): The angles of a triangle are in the ratio 2:3: 4. The largest angle of the triangle is 80°.

Reason(R) The sum of all the interior angles of a triangle is 180°

ANSWER: (a)

Assertion (A): If angles 'a' and 'b' form a linear pair of angles and  $a = 40^{\circ}$ , then  $b = 150^{\circ}$ .

Reason(R) Sum of linear pair of angles is always 180°.

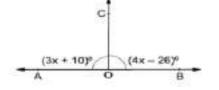

ANSWER: (d)

5 Assertion (A): In the given figure, AOB is a straight line.

If  $\angle AOC = (3x + 10)^{\circ}$ 

and  $\angle BOC (4x - 26)^{\circ}$ , then  $\angle BOC = 86^{\circ}$ 

Reason(R) The sum of angles that are formed on a straight line is equal to 180°

ANSWER: (a)

Assertion (A): If two interior angles on the same side of a transversal intersecting two parallel lines are in the ratio 5:4, then the greater of the two angles is  $100^{0}$ 

Reason(R) If a transversal intersects two parallel lines, then the sum of the interior angles on the same side of the transversal is 180°

ANSWER: (a)

Assertion (A): An angle is 14° more than its complementary angle, then angle is 52°.

Reason(R) Two angles are said to be supplementary if their sum of measure of angles is 180°

ANSWER: (b)

Assertion (A): Supplement of angle is one fourth of itself. The measure of the angle is  $144^{\circ}$ 

Reason(R) Two angles are said to be supplementary if their sum of measure of angles is 180<sup>o</sup>

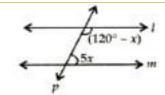

ANSWER: (a)

Assertion (A): The value of x from the adjoining figure, if  $\ell \parallel m$  is 15°.

Reason(R) If two parallel lines are intersected by a transversal,

then each pair of corresponding angles so formed is equal.

ANSWER: (b)

Assertion (A): If two internal opposite angles of a triangle are equal and external angle is given to be 110°,

Reason(R) A triangle with one of its angle 90°, is called a right triangle

ANSWER: (b)

## VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)

In the given fig  $\angle AOC = \angle ACO$  and  $\angle BOD = \angle DBO$  prove that  $AC \parallel DB$ 

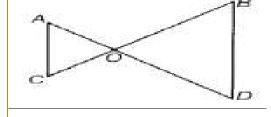

SOLUTION:  $\angle AOC = \angle ACO$  and  $\angle BOD = \angle DBO$  [Given]

But, ∠AOC=∠BOD [vertically opposite angles]

∠ACO=∠DBO

∠BOD =∠BDO

AC || DB [By alternate interior angle property]

2 The measure of an angle is twice the measure of supplementary angle. Find measure of angles.

**SOLUTION**: Let the measure be  $x^0$ .

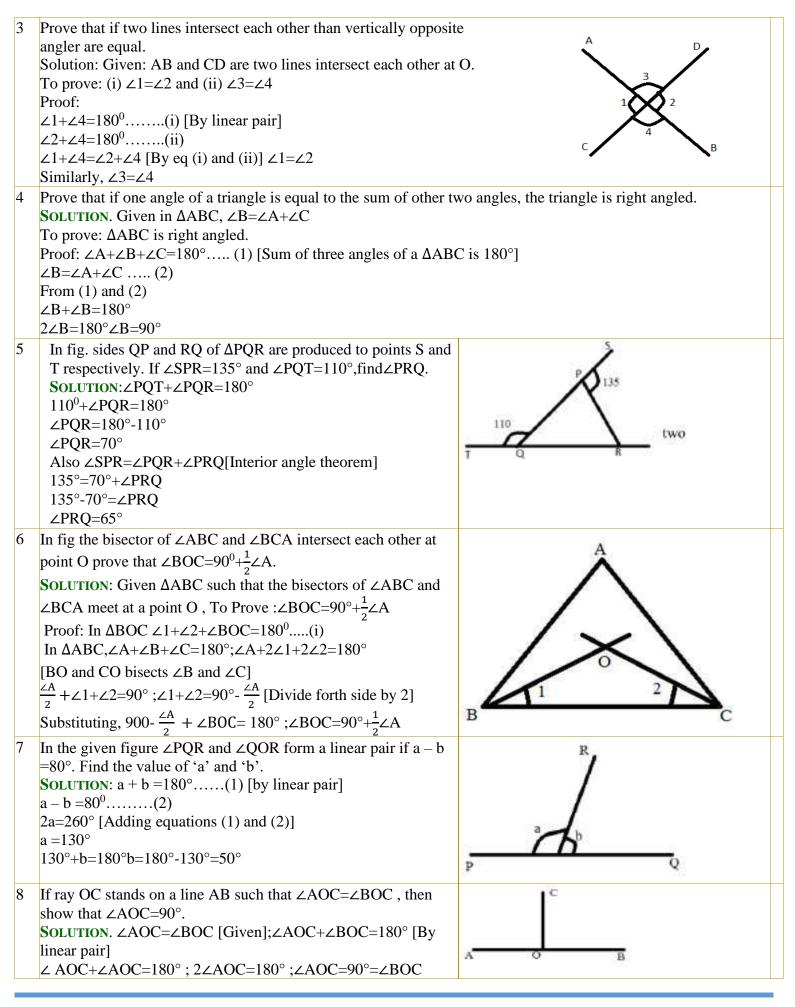

Then its supplement is  $180^{\circ}$ -  $x^{\circ}$ 

According to question

$$x^0 = 180^0 - x^0, x^0 = 360^0 - 2x^0$$

$$3x^0 = 360^0$$
 implies  $x^0 = 120^0$ 

The measure of the angles are  $120^{\circ}$  and  $60^{\circ}$ 

9 In the given figure show that AB||EF.

SOLUTION:  $\angle BCD = \angle BCE + \angle ECD$ ;  $36^{\circ} + 30^{\circ} = 66^{\circ} = \angle ABC$ 

AB||CD [Alternate interior angles are equal]

Again  $\angle ECD=30^{\circ}$  and  $\angle FEC=150^{\circ}$ 

∠ECD+∠FEC=30°+150°=180°

EF||CD [sum of consecutive interior angle is 180<sup>0</sup>]

AB||CD and EF||CD; Hence, AB||EF.

In figure if AB||CD,  $\angle$ APQ=50<sup>0</sup> and  $\angle$ PRD =127<sup>0</sup> Find x and y. SOLUTION: AB||CD and PQ is a transversal.

∠APQ=∠PQD [pair of alternate angles]

 $50^{0} = x$ 

Also AB||CD and PR is a transversal

∠APR=∠PRD

 $50^0 + Y = 127^0$ 

 $Y=127^0-50^0=77^0$ 

## SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)

In Fig. if x + y = w + z, then prove that AOB is a line.

**SOLUTION** We need to prove that AOB is a line.

We are given that x + y = w + z.

We know that the sum of all the angles around a fixed point is 3600.

Thus, we can conclude that

$$\angle AOC + \angle BOC + \angle AOD + \angle BOD = 360^{\circ}$$

$$x + y + z + w = 360^{\circ}$$

But, x+y = w+z. (Given)

 $2(x+y)=360^{0}$ 

 $(x+y)=180^0$ 

From the given figure, we can conclude that y and x form a linear pair.

We know that if a ray stands on a straight line, then the sum of the angles of linear pair formed by the

ray with respect to the line is  $180^{\circ}$ .  $(x+y)=180^{\circ}$ 

Therefore, we can conclude that AOB is a line.

#### SOLUTION

We are given that  $\angle XYZ = 64^{\circ}$ , XY is produced

to P and YQ bisects  $\angle$ ZYP.

We can conclude the given below figure for the given situation:

We need to find  $\angle XYQ$  and reflex  $\angle QYP$ .

From the given figure, we can conclude that  $\angle XYZ$  and  $\angle ZYP$  form a linear pair.

We know that sum of the angles of a linear pair is  $180^{\circ}$ .

$$\angle XYZ + \angle ZYP = 180^{\circ}$$

$$64^{0} + \angle ZYP = 180^{0}$$

$$\angle ZYP=116^{0}$$

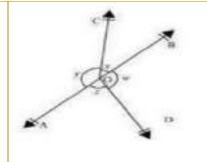

Ray YQ bisects 
$$\angle ZYP$$
, or  $\angle QYZ = \angle QYP = \frac{116}{2} = 58^{\circ}$ 

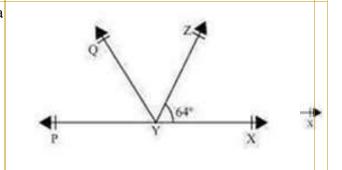

$$\angle XYQ = \angle QYZ + \angle XYZ$$

$$58^{0}+64^{0}=122^{0}$$

reflex 
$$\angle QYP = 360^{\circ} - \angle QYP$$

 $360^{\circ}-58^{\circ}=302^{\circ}$ 

	Therefore, we can conclude that $\angle XYQ=122^0$ and reflex $\angle QYP=302^0$	
3	Prove that sum of three angles of a triangle is $180^{\circ}$ . Draw a triangle ABC. Through point A, draw a line parallel to BC. Let angles at B and C be $\angle$ ABC and $\angle$ ACB. Alternate interior angles formed with the transversal equal the angles of triangle. So: $\angle$ A + $\angle$ B + $\angle$ C = $180^{\circ}$ (angle on a straight line) Hence, proved.	x A A 5 C
4	The side BC of $\triangle$ ABC is produced from ray BD. CE is drawn parallel to AB, show that $\angle$ ACD= $\angle$ A+ $\angle$ B. Also prove that $\angle$ A+ $\angle$ B+ $\angle$ C= 180 $^{0}$ Solution $\stackrel{\cdot}{\cdot}$ AB $\stackrel{\parallel}{\cdot}$ CE and AC intersect them $\angle$ 1= $\angle$ 4 (1) [Alternate interior angles] Also AB $\stackrel{\parallel}{\cdot}$ CE and BD intersect them $\angle$ 2 = $\angle$ 5 (2) [Corresponding angles] Adding eq (1) and eq (2) $\angle$ 1+ $\angle$ 2 = $\angle$ 4+ $\angle$ 5 ;;Adding $\angle$ C on both sides, we get	$ \begin{array}{c c} A \\ 1 \\ 4 \\ 5 \\ C \\ D \end{array} $
	$\angle A + \angle B + \angle C = \angle C + \angle ACD$ ; $\angle A + \angle B + \angle C = 180^{\circ}$	
5	Prove that if a transversal intersect two parallel lines, then each pair of alternate interior angles is equal.  SOLUTION Given: line AB  CD intersected by transversal PQ  To Prove: (i) $\angle 2 = \angle 5$ (ii) $\angle 3 = \angle 4$ Proof: $\angle 1 = \angle 2$	$ \begin{array}{c c} A & & & & \\  & & & & \\  & & & & \\  & & & &$
6	In the given figure $\triangle$ ABC is right angled at A. AD is drawn perpendicular to BC. Prove that $\angle$ BAD= $\angle$ ACB SOLUTION: AD $\bot$ BC $\angle$ BAD= $90^{\circ}$ - $\angle$ ABD $\rightarrow$ (1) $\angle$ C= $90^{\circ}$ - $\angle$ B $\rightarrow$ (2) From (1) and (2);; $\angle$ BAD= $\angle$ ACB Hence proved.	B C C
7	In $\triangle ABC$ , $\angle B=45^{\circ}$ , $\angle C=55^{\circ}$ and bisector of $\angle A$ meets BC at a point D. Find $\angle ADB$ and $\angle ADC$ . SOLUTION $\triangle ABC$ , $\angle A+\angle B+\angle C=180^{\circ}$ [Sum of three angle of a $\triangle =180^{\circ}$ ] $\Rightarrow \angle A+45^{\circ}+55^{\circ}=180^{\circ}$ ; $\angle A=180^{\circ}-100^{\circ}=80^{\circ}$ $\therefore AD \text{ bisects } \angle A$ : $\angle 1=\angle 2=\frac{1}{2}\angle A=\frac{1}{2}\times80^{\circ}=40^{\circ}$	45 <sup>0</sup> 55 <sup>0</sup>
	Now in $\triangle$ ADB, We have $\angle 1+\angle B+\angle ADB=180^{\circ}$	B

$$\Rightarrow 40^{\circ} + 45^{\circ} + \angle ADB = 180^{\circ}, \Rightarrow \angle ADB = 180^{\circ} - 85^{\circ} = 95^{\circ}$$
  
 $\angle ADB + \angle ADC = 180^{\circ}, Also, 95^{\circ} + \angle ADC = 180^{\circ}$   
 $\angle ADC = 180^{\circ} - 95^{\circ} = 85^{\circ}. \angle ADB = 95^{\circ} and \angle ADC = 85^{\circ}$ 

In figure two straight lines AB and CD intersect at a point O. If  $\angle BOD = x^0$  and  $\angle AOD = (45-x)^0$ . Find the value of x hence find (a)  $\angle BOD$  (b)  $\angle AOD$  (c)  $\angle AOC$  (d)  $\angle BOC$  Solution:  $\angle ADB = \angle AOD + \angle DOB \dots$  By linear pair  $180^0 = 4x - 5 + x$ ; 5x = 185  $x = \frac{185}{5} = 37^0$ ;  $= 4 \times 37 - 5 = 148 - 5 = 143^0$   $\angle BOC = 143^0$  ...

vertically opposite angles; ∠BOD = ∠AOC = 37°

The side BC of a Δ ABC is produced to D. the bisector of ∠A meets BC at L as shown if fig. prove

that ∠ABC+∠ACD=2∠ALC

SOLUTION In  $\triangle$ ABCwe have  $\angle$ ACD= $\angle$ B+ $\angle$ A  $\rightarrow$  (1) [Exterior angle property]

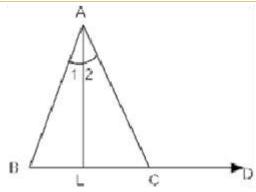

$$\angle ACD = \angle B + 2\angle 1$$

In 
$$\triangle ABL$$
;  $\angle ALC = \angle B + \angle BAL$  [exterior angle property]

$$\angle ALC = \angle B + \angle 1$$
;  $\Rightarrow 2\angle ALC = 2\angle B + 2\angle 1...(2)$ 

Subtracting (1) from (2)

$$2\angle ALC - \angle ACD = \angle B \dots \angle ACD + \angle ABC = 2\angle ALC$$

## LONG ANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

In fig M and N are two plane mirrors perpendicular to each other; prove that the incident ray CA is parallel to reflected ray BD.

**SOLUTION** Draw AP $\perp$ M and BQ $\perp$ N

$$\therefore BQ \perp N$$
 and  $AP \perp M$  and  $M \perp N$ 

$$\Rightarrow$$
 BQ  $\perp$ AP

In 
$$\triangle$$
 BOA  $\angle 2+\angle 3+\angle$ BOA= $180^{\circ}$  [By angle sum property]

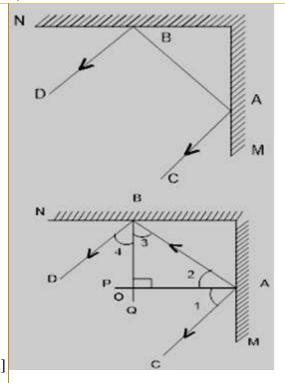

$$\Rightarrow \angle 2 + \angle 3 + 90^{\circ} = 180^{\circ}$$

$$_{\rm Also}$$
  $\angle$ 1= $\angle$ 2 and  $\angle$ 4= $\angle$ 3

$$\Rightarrow$$
  $\angle 1+\angle 4=\angle 2+\angle 3=90^{\circ}$ 

$$\therefore (\angle 1 + \angle 4) + (\angle 2 + \angle 3) = 90^{\circ} + 90^{\circ} = 180^{\circ}$$

$$\Rightarrow (\angle 1 + \angle 2) + (\angle 3 + \angle 4) = 180^{\circ}$$

2 In the given figure, if PQ || ST, ∠PQR=110<sup>0</sup> ,∠RST=130<sup>0</sup>, find ∠QRS.

SOLUTION We are given that  $PQ \parallel ST$ ,  $\angle PQR = 110^{\circ}$  and  $\angle RST = 130^{\circ}$ 

We need to find the value of  $\angle QRS$  in the figure.

We need to draw a line RX that is parallel to the line ST, to get Thus, we have  $ST \parallel RX$ .

We know that lines parallel to the same line are also parallel to each other.

We can conclude that  $^{PQ} \parallel ST \parallel RX$  .

$$\angle PQR = \angle QRX$$
 (Alternate interior angles), or  $\angle QRX = 110^{\circ}$ .

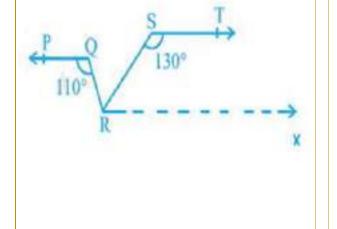

We know that angles on same side of a transversal are supplementary.

$$\angle RST + \angle SRX = 180^{\circ}$$
;  $\Rightarrow 130^{\circ} + \angle SRX = 180^{\circ}$ 

$$\Rightarrow \angle SRX = 180^{\circ} - 130^{\circ} = 50^{\circ}$$
.; From the figure, we can conclude that

$$\angle QRX = \angle SRX + \angle QRS$$
  $\Rightarrow 110^{\circ} = 50^{\circ} + \angle QRS$ 

$$\Rightarrow \angle QRS = 60^{\circ}$$
. Therefore, we can conclude that  $\angle QRS = 60^{\circ}$ .

It is given that  $\angle XYZ=64^{\circ}$  and XY is produced to point P. Draw a figure from the given information.

If ray YQ bisects ∠ZYP. Find ∠XYQ and reflex ∠QYP. SOLUTION:

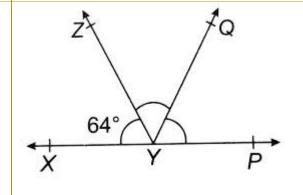

XYP is a straight line,

$$\angle$$
 ZYP = 180° -  $\angle$  XYZ

$$\angle ZYP = 180^{\circ} - 64^{\circ}$$

Since YQ bisects ∠ ZYP

$$\angle ZYQ = \angle QYP = \frac{1}{2} \angle ZYP$$

In the below fig. If OD is the bisector of  $\angle AOC$ , OE is the bisector of  $\angle BOC$  and OD  $\perp$  OE. Show that the points A, O and B are collinear.

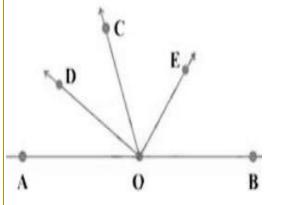

SOLUTION Given: In figure, OD  $\perp$  OE (i.e.  $\angle$ DOE=90 $^{0}$ ), OD and OE are the bisectors of  $\angle$ AOC and  $\angle$ BOC.

To prove: points A, O and B are collinear i.e., AOB is a straight line.

Proof: From the fig. we have ∠AOB comprising ∠AOC and ∠BOC

such that OD and OE are the bisectors of these two angles  $\angle AOB = \angle AOC + \angle BOC$ . Since, OD and OE bisect angles  $\angle AOC$  and  $\angle BOC$ 

On adding equations (1) and (2), we get

∠AOC+∠COB=2∠DOC+2∠COE

;⇒∠AOC+∠COB=2(∠DOC+∠COE)

 $\Rightarrow \angle AOC + \angle COB = 2\angle DOE ; \Rightarrow \angle AOC + \angle COB = 2\times90 \circ [\because OD \bot OE]$ 

⇒∠AOC+∠COB=180∘ ;∴∠AOB=180∘

So, ∠AOC and ∠COB are forming linear pair or AOB is a straight line.

Hence, points A, O and B are collinear.

In the given figure, OP, OQ, OR and OS are four rays. Prove that  $\angle POQ + \angle ROQ + \angle SOR + \angle POS = 360^{\circ}$ .

SOLUTION Let us produce a ray OQ backwards to a point M, then MOQ is a straight line. Now, OP is a ray on the line MOQ. Then, by linear pair axiom, we have  $\angle$ MOP +  $\angle$ POQ = 1800 .....(i) Similarly, OS is a ray on the line MOQ. Then, by linear pair axiom, we have

$$\angle MOS + \angle SOQ = 180o \dots (ii)$$

Also,  $\angle$ SOR and  $\angle$ ROQ are adjacent angles.

$$\therefore \angle SOQ = \angle SOR + \angle ROQ ...(iii)$$

On putting the value of ∠SOQ from Eq.(iii) in Eq.(ii), we get

$$\angle MOS + \angle SOR + \angle ROQ = 180^{\circ} \dots (iv)$$

Now, on adding Eqs.(i) and (iv), we get

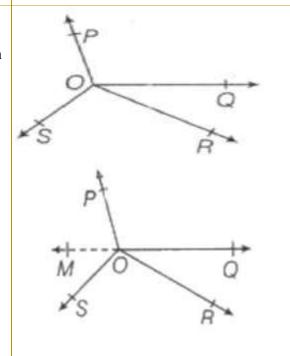

$$\angle MOP + \angle POQ + \angle MOS + \angle SOR + \angle ROQ = 180^{\circ} + 180^{\circ}$$

$$\Rightarrow \angle MOP + \angle MOS + \angle POQ + \angle SOR + \angle ROQ = 360^{\circ} \dots (iv)$$

But 
$$\angle$$
MOP +  $\angle$ MOS =  $\angle$ POS

Then, from Eq.(v), we get  $\angle POS + \angle POQ + \angle SOR + \angle ROQ = 360^{\circ}$ 

Hence proved.

## CASE BASED QUESTIONS (04 MARKS QUUESTIONS)

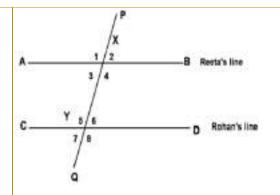

Reeta and Rohan were playing a game on parallel lines and the angles formed with the transverse line (i.e., alternate angles, corresponding angle and interior angles). First Reeta drew a straight line AB, then Rohan drew another straight line CD||AB. Further, a transverse line PQ was drawn which intersects lines AB and CD at points X and Y respectively. Now they did toss with a coin and Rohan won the toss. Following were the rules of the game: Toss winner will ask a question and others will answer. If the answer is correct then person answering will ask question else questioner will ask next question.

Who wins the last question he/she will be the winner.

Based on the above paragraph please answer these questions:

- (i)Which is the alternate angle to ∠6?
- (ii)Which is the corresponding angle to ∠1?
- (iii)If  $\angle 4 = 120^{\circ}$  then what is measure of  $\angle 6$ ?
- (OR) What is the sum of  $\angle 3$  and  $\angle 5$ ?

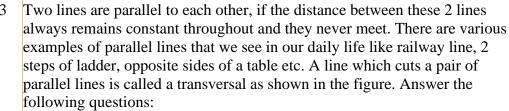

**Answers** :  $\angle 3$  ,  $\angle 5$  ,  $60^{\circ}$  ,  $180^{\circ}$ 

- Ritesh and Sheetal are cousins and both went to visit Mughal Garden. Before going, they searched the location of their destination on a map. During searching, they found on map that Akbar Road and M.G. road form a right angle at their intersection point and Hudson lane form 57° angle with M.G. road.
  - (a) What is the measure of acute angle between Akbar Road and Hudson lane?
  - (b) If Ritesh is standing on M.G Road in the west direction and Sheetal is on H.M road, what is the shortest angle they can cover in order to meet?
  - (c) Find the measure of reflex angle formed between M.G Road [in east direction] with Hudson lane.

**SOLUTION** (a) From the given figure, Hudson Lane forms  $57^{\circ}$  with M.G road and Akbar Road and M.G Road form a  $90^{\circ}$  at their intersection point. Therefore, the required angle between Akbar Road and Hudson lane =  $90^{\circ} - 57^{\circ} = 33^{\circ}$ .

- (b) Sheetal travels from H.M road to M.G road [East] to Hudson to Akbar road and then to M.G road west. So, the measure of angle she cover =  $37^{\circ} + 90^{\circ} + 90^{\circ} = 217^{\circ}$ . But if she goes from H.M road to south of BT road and then to M.G road [west], Then, the measure of angle, she cover =  $53^{\circ} + 90^{\circ} = 143^{\circ}$  Hence, the shortest angle she has to cover will be  $143^{\circ}$
- (c) The required measure of reflex angle formed between M.G Road [in east direction] with Hudson lane =  $360^{\circ} 57^{\circ} = 303^{\circ}$ .

- (b) If  $\angle 6 = 2x$  and  $\angle 1 = 70^{\circ}$ . Then find the value of x. (1)
- (c) If  $\angle 6 : \angle 5 = 2 : 3$  then find the value of  $\angle 7$ . (2)

**SOLUTION** (a) Since CD | | AB and LM is transversal,

 $\angle 5$  and  $\angle 8$  are the alternate exterior angles.  $\angle 5 = \angle 8$  or  $\angle 8 = \angle 5 = 65^{\circ}$ 

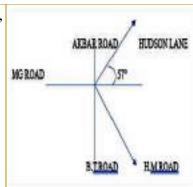

(b) Since CD | | AB and LM is transversal,  $\angle 5 = 70^{\circ}$  (Corresponding angles) and  $\angle 6 + \angle 5 = 180^{\circ}$  (Linear pair axiom)

$$2x + 70^{\circ} = 180^{\circ}$$
;  $2x = 110^{\circ} x = 55^{\circ}$ .

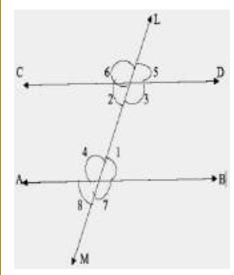

(c) Let  $\angle 6 = 2k$  and  $\angle 5 = 3k$ ; Now,  $\angle 6 + \angle 5 = 180^{\circ}$  (Linear pair axiom)

$$2k + 3k = 180^{\circ}; 5k = 180^{\circ} k = 36^{\circ}; \angle 6 = 2k = 2 \times 36^{\circ} = 72^{\circ}$$

Now,  $\angle 6$  and  $\angle 7$  are the alternate exterior angles. ; $\angle 6 = \angle 7$  or  $\angle 7 = \angle 6 = 72^{\circ}$ 

#### HOTS

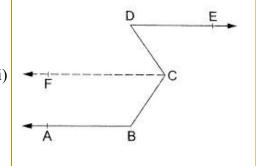

respectively.

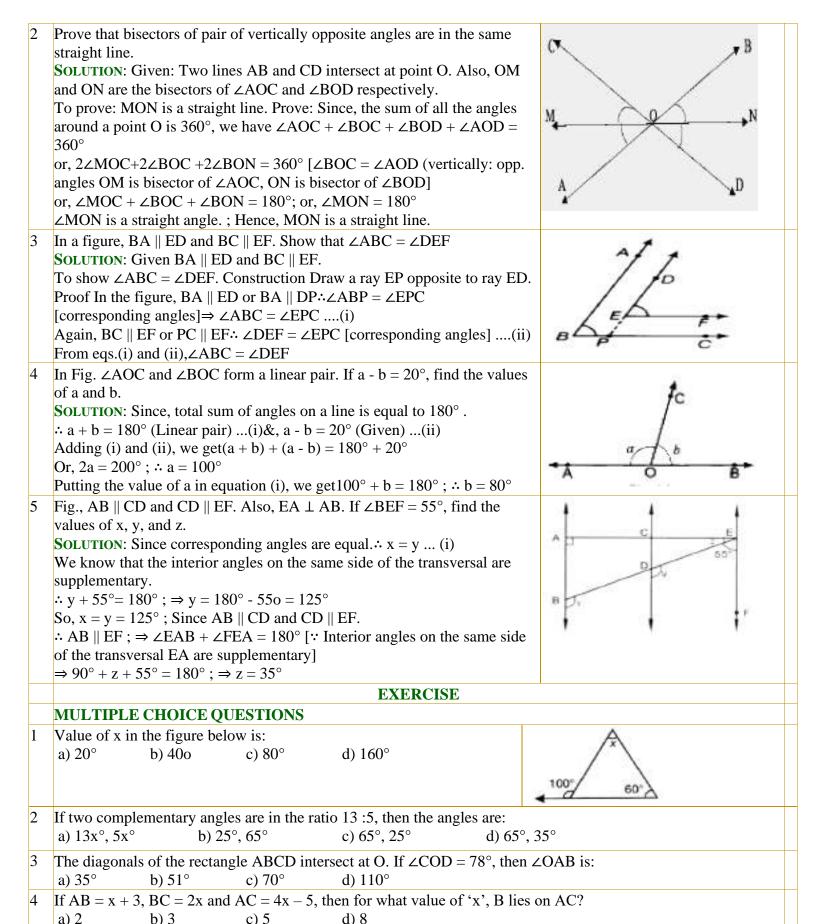

In Figure, AB || DE. Prove that  $\angle ABC + \angle BCD = 180^{\circ} + \angle CDE$ .

SOLUTION: Through C, draw CF parallel to both AB and DE. Since AB || CF and the transversal BC cuts them at B and C respectively.

∠ABC+1=180° [Consecutive interior angles are supplementary]......(i)
Similarly, DE || CF and transversal CD intersects them at C and D

 $\angle$ CDE =  $\angle$ 2; Adding (i) and (ii), we get  $\angle$ ABC+ $\angle$ 1+ $\angle$ 2=180°+ $\angle$ CDE : $\angle$ ABC+ $\angle$ BCD=180°+ $\angle$ CDE

c) 5

- 5 In the given figure, find the value of x:
  - a) 40°
- b) 50°
- c)  $60^{\circ}$
- d) 80°

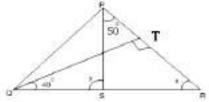

## ASSERTION - REASON BASED QUESTIONS

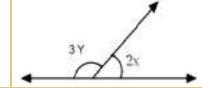

- 1 Assertion: A triangle can have two obtuse angles.
  - Reason: The sum of all the interior angles of a triangle is 180°
- Assertion: The angles of a triangle are in the ration 3:5:7. The triangle is acute-angled Reason: The sum of angles that are formed on a straight line is equal to 180°.
- Assertion: line l is parallel to line m.
  Reason: If a transversal intersects two lines in such a way that a pair of consecutive interior angles
- are supplementary, then the two lines are parallel.
  4 Assertion (A): If angles 'a' and 'b' form a linear pair of angles and a = 40° then b = 150°.
  Reason (R): Sum of linear pair of angles is always 180°.
- Assertion (A): An angle is 14° more than its complementary angle, then angle is 52°. Reason (R): Two angles are said to be supplementary if their sum is 180°

## VERY SHORT ANSWER TYPE QUESTIONS

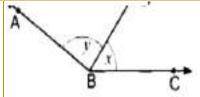

In figure,  $QT \perp PR \angle TQR = 40^{\circ}$  and  $\angle SPR = 50^{\circ}$  find x and y.

- The three angles of a triangle, one is twice the smallest and another is three times the smallest. Find the angles.
- In fig x=300 the value of Y is

- 4 The angles of a triangle are in the ratio 5:3:7, what is the type of the triangle?
- For what value of x + y in Fig., will ABC be a line? Justify your answer.

## SHORT ANSWER TYPE QUESTIONS

- 1 If two straight lines are perpendicular to the same line, prove that they are parallel to each other.
- 2 Two unequal angles of a parallelogram are in the ratio 2:3. Find all its angles in degrees.
- The opposite sides of a quadrilateral are parallel. If one angle of the quadrilateral is 600, find the other angles.
- Two lines AB and CD intersect at O. If ∠AOC+ ∠COB+∠BOD=270°, find the measures of ∠AOC, ∠COB, ∠BOD and ∠DOA.

## LONG ANSWER TYPE QUESTIONS

- In Figure,  $\angle$ AOF and  $\angle$ FOG form a linear pair. If  $\angle$ EOB =  $\angle$ FOC =90° and  $\angle$ DOC= $\angle$ FOG= $\angle$ AOB=30°.
  - (i) Find the measures of  $\angle FOE$ ,  $\angle COB$  and  $\angle DOE$ .
  - (ii) Name all the right angles.
  - (iii) Name three pairs of adjacent complementary angles.

- (iv) Name three pairs of adjacent supplementary angles.
- (v) Name three pairs of adjacent angles.
- 2 (i)If two parallel lines are intersected by a transversal, then prove that the bisectors of any pair of alternate interior angles are parallel.
  - (ii)If two parallel lines are intersected by a transversal, then prove that the bisectors of any two corresponding angles are parallel.
- Prove that "If two lines intersect each other, then the vertically opposite angles are equal." Using this theorem, find all the angles if  $\angle$  POR:  $\angle$  ROQ = 5 : 7 in the below figure where lines PQ and RS intersect each other at point O.
- If two parallel lines are intersected by a transversal prove that the bisectors of the interior angles on the same side of transversal intersect each other at right angles.
- Two parallel lines are intersected by a transversal. Prove that the bisectors of two pairs of interior angles enclose a rectangle.

## CASE BASED QUESTIONS

BSE stands for a disease called Bovine Spongiform Encephalopathy.
"Bovine" means that the disease affects cows, "spongiform" refers to the way the brain from a sick cow cow looks spongy under a microscope, and "encephalopathy" indicates that it is a disease of the brain. This disease is commonly called "mad cow disease."

A farmer has a field ABCD formed by two pair of parallel roads as shown below in which  $1 \parallel m$  and  $p \parallel q$ . His four cows suffering from BSE. Thus, he tied them at four corners of the field ABCD.

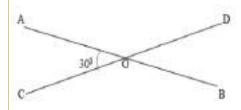

- Q.3. If cow at C and cow at Dis 2 km apart, then what is the distance between cow at A and cow at B?
- Q. 4. If  $\angle B=45^{\circ}$ , then  $\angle D=...$
- Q. 5. If we join BD such that BD meet AC at O and  $\angle$ BOC 30°, then what is the measure of  $\angle$ AOD?

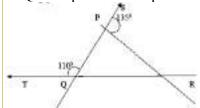

- Q. 2. Find the measure of  $\angle AOD$
- Q. 3. Which property is used in this case.

If  $\angle PQT = 110^{\circ}$  and  $\angle SPR = 135^{\circ}$ 

- Q. 1. Find ∠QPR Q. 2. Find ∠PRQ Q. 3. Which property is used over here. HOTS
- If the complement of an angle is equal to the supplement of the thrice of it. Find the measure of the angle.
- If the supplement of an angle is three times its complement, find the angle. Ans.450.
- Prove that the bisectors of a pair of vertically opposite angles are in the same straight line.
- If two straight lines intersect each other, prove that the ray opposite to the bisector of one of the angles thus formed bisects the vertically opposite angle.
- If the bisectors of a pair of alternate angles formed by a transversal with two given lines are parallel, prove that the given lines are parallel.

#### ANSWERS

MCQ	ASSERTION - TYPE	VERY SHORT TYPE
1.Answer (b)	1.Answer: (d)	1.Answer: x=50o and y=80o.
2.Answer (c)	2.Answer: (b)	2.Answer: 30o ,60o ,and 90o.
3.Answer (b)	3.Answer: (d)	3. Answer: Y=40o.
4.Answer (d)	4.Answer: (d)	4. Answer: An acute angled triangle.
5.Answer (b)	5.Answer: (b)	5.Answer: x + y must be equal to 180°.

## SHORT ANSWER TYPE **QUESTIONS**

## 1. Answer. Try to prove.

 $2.Answer: \angle A = \angle C = 720.$ 

 $\angle B = \angle D = 1080$ .

3.Answer: 1200, 600, 1200.

4. Answer Each equal to 900.

5. Answer. Try to prove.

## LONG ANSWER TYPE QUESTIONS

Answer: (i)  $\angle FOE = \angle COB = \angle DOE = 30^{\circ}$ 

(ii) ∠AOD, ∠BOE, ∠COF, ∠DOG,

(iii) ∠AOB, ∠BOD; ∠AOC, ∠COD; ∠BOC, ∠COE (iv)  $\angle$ AOB,  $\angle$ BOG;  $\angle$ AOC,  $\angle$ COG;  $\angle$ AOD,  $\angle$ DOG

(v)  $\angle BOC$ ,  $\angle COD$ ;  $\angle COD$ ,  $\angle DOE$ ;  $\angle DOE$ ,  $\angle EOF$ .

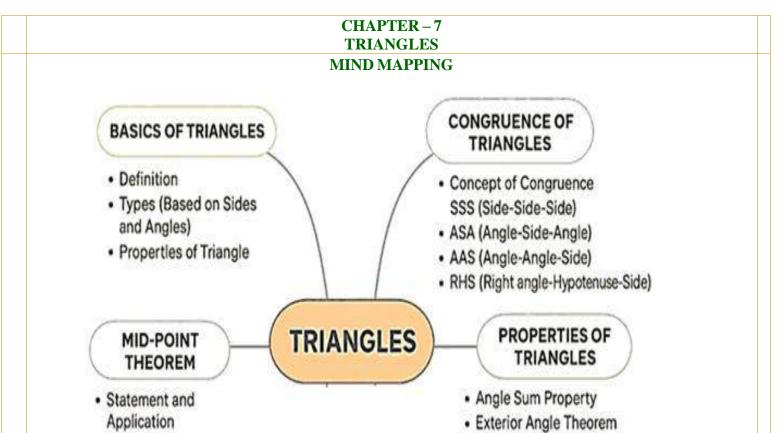

2..Answer. Try to prove.

3..Answer. Try to prove. 4..Answer. Try to prove.

5..Answer. Try to prove.

#### CASE BASED QUESTIONS

- ✓ 1.30°, Angles on the same side of a parallelogram are supplementary., 2 km, 45°, 30°
- ✓ 2.∠BOD=300, ∠AOD=1500, Ans. Intersecting lines property is used which states, that, "Two lines are said to be intersecting when the perpendicular distance between the two lines is not same everywhere. They meet at one point.",
- ✓ 3.∠QPR=450.∠PRQ=650.In this case exterior angle property is used which states that, "An exterior angle of a triangle is equal to the sum of interior opposite angles."

#### GIST/SUMMARY OF THE LESSON:

- Criteria for congruence of Triangles.
- Properties of Triangles.

#### **DEFINITIONS AND FORMULAE:**

#### Criteria for congruence of Triangles:

- CONGRUENCE OF TRIANGLE: The geometrical figures of same shape and size are congruent to each other i.e., two triangles  $\triangle ABC$  and  $\triangle PQR$  are congruent if and only if their corresponding sides and the corresponding angles are equal. If two triangles  $\triangle ABC$  and  $\triangle PQR$  are congruent under the correspondence A P, B Q and C R, then symbolically it is expressed as  $\triangle ABC \cong \triangle PQR$
- SAS CONGRUENCE RULE: Two triangles are congruent if two sides and the included angle of one triangle are equal to the sides and the included angle of the other triangle.
- ASA CONGRUENCE RULE: Two triangles are congruent if two angles and the included side of one triangle are equal to two angles and the included side of the other triangle.
- AAS CONGRUENCE RULE: Two triangles are congruent if any two pairs of angles and one pair of corresponding sides are equal.
- SSS CONGRUENCE RULE: If three sides of a triangle are equal to the three sides of another triangle, then the two triangles are congruent.
- RHS CONGRUENCE RULE: If in two right triangles, the hypotenuse and one side of a triangle are equal to the hypotenuse and one side of the other triangle, then the two triangles are congruent.
- Properties of Triangles:
  - ✓ (i)A triangle is isosceles if it's any two sides are equal. Here, we will discuss some properties related to isosceles triangle.
  - ✓ Angles opposite to equal sides of a triangle are equal. In figure,  $\angle B = \angle C$
  - ✓ (ii) The sides opposite to equal angles of a triangle are equal. In figure, AB=AC
  - ✓ In an isosceles triangle, bisector of the vertical angle of a triangle bisect the base.
  - ✓ The medians of an equilateral triangle are equal in length.
  - ✓ A point equidistant from two intersecting lines lies on the bisector of the angles formed by the two lines.

	MALL MIDLE CHOICE OFFICERONG (94 MADIZ OFFICERONG)	
1	MULTIPLE CHOICE QUESTIONS (01 MARK QUESTIONS)  If $\triangle ACB \cong \triangle EDF$ , then which of the following equation sis/are true?  (I)AC=ED (II) $\angle C = \angle F$ (III)AB=EF  (a) Only (I) (b) (I) and (III) (c) (II) and (III) (d)All of these	SOLUTION: (b)
I .	Since, $\triangle ACB \cong \triangle EDF$ . $\therefore AC = ED$ , $CB = DF$ and $AB = EF$ , $And \angle A = \angle E$ , $\angle C = \angle D$ and $\angle B = \angle F$ . Therefore, equations(I)and(III)are true. In a triangle (as shown in fig). $AB = CD$ , $AD = BC$ and $AC$ is the angle bisector of $\angle A$ , then which among the following conditions is true for congruence of $\triangle ABC$ and $\triangle CDA$ by $SAS$ rule?  (a) $\angle A = \angle D$ (b) $\angle B = \angle A$ (c) $\angle B = \angle D$ (d) $\angle C = \angle A$	SOLUTION: (c)
3	As in $\triangle ABC$ and $\triangle CDA$ , $AB = CD$ and $AD = BC$ For SAS Rule, if two sides and the included angle of one triangle are equal to the two sides and the included angle of the other triangle, then triangles are congruent. Therefore, for $\triangle ABC \cong \triangle CDA$ by SAS, $\angle B$ must be equal to $\angle D$ . If $AB = QR$ , $BC = PR$ and $CA = PQ$ in $\triangle ABC$ and $\triangle PQR$ , then: (a) $\triangle ABC \cong \triangle PQR$ (b) $\triangle CBA \cong \triangle PRQ$ (c) $\triangle BAC \cong \triangle RPQ$ (d) $\triangle BCA \cong \triangle PQR$	SOLUTION:(b)
4	Consider the triangles shown in the figure. Which of these is not true about the given triangles?  (a) $\Delta XYZ \cong \Delta STU$ (by SSS congruence rule); (b) $\Delta XYZ \cong \Delta STU$ (RHS congruence) (c) $\Delta XYZ \cong \Delta STU$ (by ASA congruence rule); (d) $\Delta XYZ \cong \Delta STU$ (SAS congruence)	SOLUTION:(c)
	If $\triangle ABC \cong \triangle PQR$ and $\triangle ABC$ is not congruent to $\triangle RPQ$ , then which of the following is not true?  (a) $BC = PQ$ (b) $AC = PR$ (c) $QR = BC$ (d) $AB = PQ$	SOLUTION:(a)
6	Given, $\triangle ABC \cong \triangle PQR$ Thus, the corresponding sides are equal. Hence, $AB = PQ$ , $BC = QR$ and $AC = PR$ . Therefore, $BC = PQ$ is not true for the triangles. $\triangle LMN$ is an isosceles triangle such that $LM = LN$ and $\angle N = 65^{\circ}$ . The value of $\angle L$ is:  (a) $\angle L = 55^{\circ}$ (b) $\angle L = 45^{\circ}$ (c) $\angle L = 50^{\circ}$ (d) $\angle L = 65^{\circ}$	SOLUTION: (c)
	Ritish wants to prove that $\triangle FGH \cong \triangle JKL$ using SAS rule. He knows that $FG = JK$ and $FH = JL$ . What additional piece of information does he need?  (a) $\angle F = \angle J$ (b) $\angle H = \angle L$ (c) $\angle G = \angle K$ (d) $\angle F = \angle G$ Solution: (a) $\angle F = \angle J$ We know for SAS, if two sides and the included angle of one triangle are equal to the two sides and the included angle of the other triangle, then the triangles are congruent. So, $\angle F = \angle J$	SOLUTION: (a)
	In the given figure, $\triangle ABC \cong \triangle DEF$ by SAS congruence rule. The value of $\angle x$ is: (a) $75^{\circ}$ (b) $105^{\circ}$ (c) $125^{\circ}$ (d) $5^{\circ}$	SOLUTION: (d) 5°
9	In $\triangle$ ABC and $\triangle$ DEF, $\angle$ C= $\angle$ F, AB = DE: $\triangle$ AC = DF, $\triangle$ ABC $\cong$ $\triangle$ DEF[By RHS rule] $\angle$ B = $\angle$ E [By CPCT] $\Rightarrow$ (4x²)°=(3x²+25)° $\Rightarrow$ x²=25 $\Rightarrow$ x=5°	SOLUTION: (c) 4 cm

In  $\triangle ABC$ ,  $\angle C = \angle A$  and BC = 4 cm and AC = 5 cm, then find length of AB.

(b) 3 cm

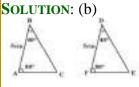

(c) 4 cm

(d) 2.5 cm

10 It is given that  $\triangle ABC \cong \triangle FDE$  and AB = 5 cm,  $\angle B = 40^{\circ}$ 

and  $\angle A = 80^{\circ}$ . Then which of the following is true? (Two triangles are congruent if their corresponding sides are equal in length and their corresponding angles are equal in size.)

- (a) DF = 5 cm,  $\angle F = 60^{\circ}$
- (b) DF = 5 cm,  $\angle E = 60^{\circ}$
- (c) DE = 5 cm,  $\angle$ E = 60°
- (d) DE = 5 cm,  $\angle D = 40^{\circ}$

## ASSERTION - REASON BASED QUESTIONS

In the following questions, a statement of Assertion (A) is followed by a statement of Reason(R). Pick the correct option:

Both Assertion (A) and Reason(R) are true and Reason(R) is the correct explanation of Assertion (A).

Both Assertion (A) and Reason(R) are true but Reason(R) is NOT the correct explanation of Assertion (A).

Assertion (A) is true but Reason(R) is false.

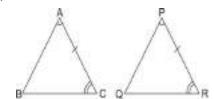

Assertion (A) is false but Reason(R) is true.

Assertion (A): If we draw two triangles with angles 40°, 60° and 80° and the length of the sides of one triangle be different than that of the corresponding sides of the other triangle, then two triangles are not congruent. Reason (R): If two triangles are constructed which have all corresponding angles equal but have unequal corresponding sides, then two triangles cannot be congruent to each other.

ANSWER: (a) Assertion (A): There is no rule of congruency when both triangles have equal corresponding angle but sides are different. So, these two triangles are not congruent.

Therefore, Assertion (A) is true. Reason (R): It is also true.

Assertion (A): In triangles ABC and PQR, if  $\angle A = \angle P$ ,  $\angle C = \angle R$  and AC = PR, then the two triangles are congruent by ASA congruence. Reason (R): If two angles and included side of a triangle are equal to the corresponding angles and side of the other triangle, then the triangles are congruent by ASA congruence.

ANSWER: (a) Assertion(A) It is true to say that two angles and the included sides of two triangles are equal then they are congruent by ASA rule.

Reason(R): It is also true.

Assertion (A): In  $\triangle$  PQR, PQ = QR and  $\angle$ R = 75°, then  $\angle$ P is 52°.

Reason (R): In a triangle, angles opposite to equal sides are equal.

ANSWER: (d) Assertion(A): in  $\triangle POR$ , PO=OR,  $\angle R = \angle P = 75^{\circ}$ , (Angles opposite to equal sides are equal).

Reason (R): It is true to say that angles opposite to equal sides of triangle are equal.

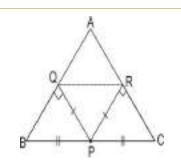

Assertion (A): In  $\triangle$  ABC, P is the mid-point of BC. If PQ  $\perp$  AB and PR  $\perp$  AC, such that PO = PR, then BO = CR.

Reason (R): If two angles and the included side of one triangle are equal to two angles and the included side of other triangle, then two triangles are congruent by ASA rule.

ANSWER: (b)Assertion (A): in  $\triangle PQB$  and  $\triangle PRC,BP=PC$  (P is the mid -point of BC);  $\angle O = \angle R = 90^{\circ}$  (Angles opposite to equal sides are equal)And PO=PR (Given):

 $\Delta PQR \cong \Delta PRC$  (By RHS congruence)BQ=CR (By CPCT)

Reason (R):It is also true.

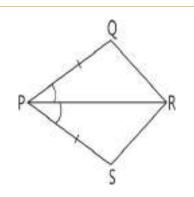

5 Assertion (A):In a quadrilateral PQRS, PQ = PS and PR bisects ∠P by SAS congruence rule.

Reason (R):Two triangles are congruent if one hypotenuse side and one of the perpendicular side of triangle is equal to the corresponding one hypotenuse side and one of the perpendicular side of the other triangle. Answer: (b)Assertion (A):in  $\Delta$ PQR and  $\Delta$ PSR,

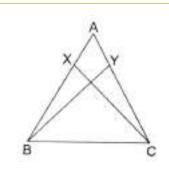

PQ=PS (Given) ; $\angle$ RPQ= $\angle$ RPS (PR bisects  $\angle$ P) ;And PR=PR (Common)  $\triangle$ PQR  $\cong$   $\triangle$ PSR (By ASA congruence) ;So, Assertion (A) is true. ;

Reason (R): It is also true.

Assertion (A):In the adjoining figure ,X and Yare respectively two points one qual sides AB and AC of ΔABC such that AX = AY then CX = BY. Reason (R): If two sides and the included angle of one triangle are equal to two sides and the included angle of the other triangle, then the two triangles are congruent.

ANSWER. (a) We know that "If two sides and the included angle of one triangle are equal to two sides and the included angle of the other triangle, then the two triangles are congruent" - This is SAS Congruence Rule.

Assertion (A): Angles opposite to equal sides of a triangle are not equal.

Reason (R): Sides opposite to equal angles of a triangle are equal.

Answer. (d) We know that Angles opposite to equal sides of a triangle are equal.

Assertion (A):  $\triangle$ ABC and  $\triangle$ DBC are two isosceles triangles on the same base BC and vertices A and D are on the same side of BC. If AD is extended to intersect BC at E, then  $\triangle$ ABD  $\cong$   $\triangle$ ACD

Reason (R): If in two right triangles, hypotenuse and one side of a triangle are equal to the hypotenuse and one side of other triangle, then the two triangles are congruent.

**ANSWER**. (b) We know that "If in two right triangles, hypotenuse and one side of a triangle are equal to the hypotenuse and one side of other triangle, then the two triangles are congruent." – This is RHS Congruence Rule So, Reason is correct.

Assertion (A): In ΔABC and ΔPQR, AB = PQ, AC = PR and ∠BAC= ∠QPR then ΔABC≅ ΔPQR Reason (R): Both the triangles are congruent by SSS congruence.
 ANSWER: (c) In ΔABC and ΔPQR, AB = PQ, AC = PR and ∠BAC = ∠QPR (Given)

then  $\triangle ABC \cong \triangle PQR$  by ASA Congruence Rule.

Assertion (A): In ABC,  $\angle A = \angle C$  and BC=4 cm and AC = 3 cm then the length of side AB = 3 cm.

Reason (R): Sides opposite to equal angles of a triangle are equal.

ANSWER(d) We know that Sides opposite to equal angles of a triangle are equal. So, Reason is correct.

### VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)

In quadrilateral ACBD, AC=AD and AB bisects  $\angle A$ . show that  $\triangle ABC \cong \triangle ABD$ . What can you say about BC and BD?

SOLUTION: In ∆ABC and ∆ABD, AC=AD [given];∠CAB=∠DAB [AB

bisects  $\angle A$ ]; B=AB [common]

ΔABC≅ΔABD [SAS criterion] ; BC=BD [CPCT]

**SOLUTION:** In  $\triangle$ ABD and  $\triangle$ ACD

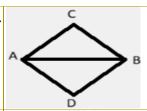

BD =CD [D is mid-point of BC]

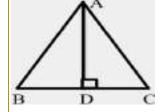

AD=AD [Common]

 $\angle ADB = \angle ADC$  [each 90°]

 $\triangle ABD \cong \triangle ACD [By SAS]$ 

AB=AC [CPCT] Hence, triangle ABC is an isosceles triangle.

10 Show that in a right angles triangle, the hypotenuse is the longest side.

**SOLUTION**: Given: Let ABC be a right angled triangle, right angled at B.

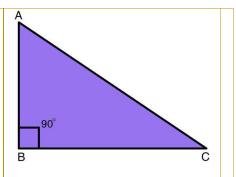

To prove: Hypotenuse AC is the longest side.

Proof: In right angled triangle ABC, $\angle A + \angle B + \angle C = 180^{\circ}$ 

$$\angle A + 90^{0} + \angle C = 180^{0} [\angle B = 90^{0}]; \angle A + \angle C = 180^{0} - 90^{0}$$

And  $\angle B = 90^{\circ}$ ;  $\angle B > \angle C$  and  $\angle B > \angle A$ ; Since the greater angle has a longer side opposite to it. AC > AB and AC > AB

Therefore  $\angle B$  being the greatest angle has the longest opposite side AC, i.e. hypotenuse.

# SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)

1  $\triangle$ ABC is an isosceles triangle in which AB = AC. Side BA is produced to D such that AD = AB. Show that  $\triangle$ BCD is a right angle triangle.

**SOLUTION:** In 
$$\triangle ABC$$
:  $AB = AC$  Also, given:  $AD = AB$ ;

$$\Rightarrow$$
 AC = AB = AD ;In  $\triangle$ ABC: AB = AC ; $\Rightarrow$  $\angle$ ACB =  $\angle$ ABC =  $\angle$ 1 ... (i)

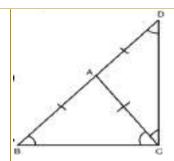

[Angles opposite to equal sides are equal]

In 
$$\triangle ACD$$
:  $AC = AD$ ;  $\Rightarrow \angle ADC = \angle ACD = \angle 2...$  (ii)

[Same reason]

Now in  $\triangle BCD$ :  $\angle DBC + \angle BCD + \angle BDC = 180^{\circ} \dots$  (iii) [Angle sum property]

Substituting values:  $\angle 1 + \angle 1 + \angle 2 + \angle 2 = 180^{\circ}$ ;  $\Longrightarrow 2(\angle 1 + \angle 2) = 180^{\circ}$ ;  $\Longrightarrow \angle 1 + \angle 2 = 90^{\circ}$ ;  $\Longrightarrow \angle BCD = 90^{\circ}$ 

Find the perimeter of the quadrilateral ABCD, if  $\angle CAB = \angle CAD$  and also AB = AD.

SOLUTION: Since AB = AD [Given]; AD = 12.1 cm [AB = 12.1cm]

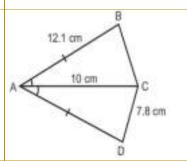

Now, In  $\triangle$ ABC and  $\triangle$ ADC;AB = AD [Given]; $\angle$ BAC = $\angle$ DAC[Given]

AC = AC [Given] ;:  $\triangle ABC \cong \triangle ADC$  [By SAS congruence rule]

Hence BC = DC [By CPCT]; BC = 7.8 cm

Now, we have to calculate the perimeter of quadrilateral.

Perimeter = AB + BC + CD + AD = 12.1 + 7.8 + 7.8 + 12.1 = 3

ABC is an isosceles triangle with AB = AC and BD and CE are its two medians. Show that BD = CE.

medians. Show that BD = CE.
SOLUTION: Given: AB = AC ;Also, BD and CE are two medians.

∴ E is the mid-point of AB, D is the mid-point of AC;

 $\Rightarrow \frac{1}{2} AB = \frac{1}{2} AC \Rightarrow BE = CD$ 

In  $\triangle BEC$  and  $\triangle CDB:BE = DC$  [Given]

 $\angle EBC = \angle DCB$  [Angles opposite to equal sides are equal]

BC = BC [Common side]  $\Rightarrow \Delta BEC \cong \Delta CDB[By SAS congruence rule]$ 

 $\Rightarrow$  BD = CE [By CPCT]

ABCD is a quadrilateral in which AD = BC and  $\angle$ DAB =  $\angle$ CBA. (See figure). Prove that:(i)  $\triangle$ ABD  $\cong$   $\triangle$ BAC(ii) BD = AC (iii)  $\angle$ ABD =  $\angle$ BAC

**SOLUTION:** (i) In  $\triangle$ ABC and  $\triangle$ ABD, BC = AD [Given] ; $\angle$ DAB =  $\angle$ CBA

SOLUTION: (1) In  $\triangle ABC$  and  $\triangle ABD$ , BC = AD [Given];  $\angle DAB = \angle CBA$ 

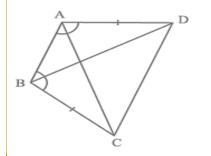

[Given]AB = AB [Common];  $\triangle$ ABC  $\cong$   $\triangle$ ABD [By SAS congruency]

Thus AC = BD [By C.P.C.T.]

(ii) Since  $\triangle$ ABC  $\triangle$ ABDAC = BD [By C.P.C.T.]

(iii) Since  $\triangle ABC \cong \triangle ABD$ 

 $\therefore$   $\angle ABD = \angle BAC [By C.P.C.T.]$ 

Show that the angles of an equilateral triangle are  $60^{\circ}$  each.

**SOLUTION**: Let ABC be an equilateral triangle.

AB = BC = AC

AB = BC

 $\angle C = \angle A....(i)$ 

Similarly, AB = AC

 $\Rightarrow \angle C = \angle B....(ii)$ 

From eq. (i) and (ii),

 $\angle A = \angle B = \angle C....(iii)$ 

Now in ∆ABC

 $\angle A + \angle B + \angle C = 180^0 \dots (iv)$ 

 $\angle A + \angle A + \angle A = 180^{\circ}$ 

 $3\angle A = 180^{0}$ 

$$\Rightarrow \angle A = 60^{\circ}$$

Since  $\angle A = \angle B = \angle C$  [From eq. (iii)]

$$-\angle A = \angle B = \angle C = 60^{\circ}$$

Hence each angle of equilateral triangle is  $60^{\circ}$ .

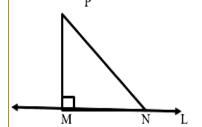

6 Show that all the line segments drawn from a given point not on it, the perpendicular line segment is the shortest.

**SOLUTION**: Given: L is a line and P is point not lying on L. PM⊥ L

N is any point on L other than M. To prove: PM <PN Proof: In  $\triangle$ PMN,  $\angle$ M is the right angle. N is an acute angle. (Angle sum property of  $\triangle$ ) -  $\angle$ M > $\angle$ N

∴PN> PM [Side opposite greater angle] ⇒ PM <PN

Hence of all line segments drawn from a given point not on it, the perpendicular is the shortest.

7 In a huge park, people are concentrated at three points (See figure).

A: where there are different slides and swings for children.

B: near which a man-made lake is situated.

C: which is near to a large parking and exit.

D:Where should an ice cream parlour be set up so that maximum number of persons can approach it?

**SOLUTION**: The parlour should be equidistant from A, B and C.

For this let we draw perpendicular bisector say L of line joining points B and C also draw perpendicular bisector say M of line joining points A and C.

Let L and M intersect each other at point O. Now point O is equidistant from points A, B and C. Join OA, OB and OC.

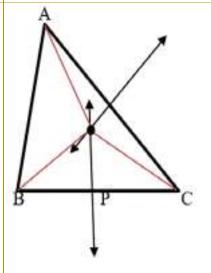

Proof: In  $\triangle$ BOP and  $\triangle$ COP, OP = OP[Common];  $\angle$ OPB =  $\angle$ OPC = 900

BP = PC [P is the mid-point of BC];  $\Delta BOP \cong \Delta COP$  [By SAS congruency]

 $\Rightarrow$  OB = OC [By C.P.C.T.]....(i); Similarly,  $\triangle$ AOQ  $\cong$   $\triangle$ COQ

 $\Rightarrow$  OA = OC [By C.P.C.T.]....(ii); From eq. (i) and (ii),

OA = OB = OC. Therefore, ice cream parlour should be set up at point O, the point of intersection of perpendicular bisectors of any two sides out of three formed by joining these points.

8 Prove that if one angle of a triangle is equal to the sum of the other two angles, the triangle is right angled:

SOLUTION:  $\angle A + \angle B + \angle C = 180^{\circ}$  Sum of three angles of triangle is  $180^{\circ}$ ] .....(1)

Given that:  $\angle A + \angle C = \angle B....(2)$ ; From (1) and (2);  $\angle B + \angle B = 180^{\circ}$ ;  $\angle B = 90^{\circ}$ 

Hence  $\triangle ABC$  is right angled.

Prove that the Angle opposite to the greatest side of a triangle is greater than two- third of a right angle i.e. greater than  $60^{\circ}$ .

**SOLUTION:** In  $\triangle ABCAB > BC$  [Given];  $\angle C > \angle A$  [angle opposite to large side is greater]....(i)

Similarly, AB > AC;  $\angle$ C > $\angle$ B......(ii); Adding (i) and (ii)2 $\angle$ C > $\angle$ A +  $\angle$ B

Adding  $\angle C$  to both sides,  $3\angle C > \angle A + \angle B + \angle C$ ;  $\Delta 3\angle C > 180^{\circ}$  [Sum of three angles of  $\triangle$  is  $180^{\circ}$ ]

Or  $\angle C > 60^{\circ}$ .

### LONGANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

- 1 ΔABC and ΔDBC are two isosceles triangles on the same base BC and vertices A and D are on the same side of BC (See figure). If AD is extended to intersect BC at P, show that:
  - (i)ΔABD≅ ΔACD
  - (ii) ΔABP≅ΔACP
  - (iii) AP bisects ∠A as well as ∠D.
  - (iv) AP is the perpendicular bisector of BC.

**SOLUTION:** i) $\triangle$ ABC is an isosceles triangle. AB = AC:

 $\triangle DBC$  is an isosceles triangle. BD = CD; Now in  $\triangle ABD$  and  $\triangle ACD$ , AB = CD

AC[Given]; BD = CD[Given]; AD = AD[Common]

 $\triangle ABD \cong \triangle ACD[By SSS congruency];$  ⇒  $\angle BAD = \angle CAD[By$ 

C.P.C.T.]....(i)

(ii)Now in  $\triangle$ ABP and  $\triangle$ ACP,AB = AC[Given]; $\angle$ BAD =  $\angle$ CAD[From eq. (i)]

 $AP = AP ; \Delta ABP \cong \Delta ACP[By SAS congruency]$ 

(iii)Since  $\triangle$ ABP≅ $\triangle$ ACP[From part (ii)];  $\Rightarrow$  ∠BAP = ∠CAP[By C.P.C.T.]

 $\Rightarrow$  AP bisects  $\angle A$ . ;Since  $\triangle ABD \cong \triangle ACD$ [From part (i)]

 $\Rightarrow$   $\angle$ ADB =  $\angle$ ADC[By C.P.C.T.].....(ii)

Now  $\angle ADB + \angle BDP = 1800[Linear pair]....(iii)$ 

And  $\angle ADC + \angle CDP = 1800$ [Linear pair].....(iv)

From eq. (iii) and (iv),  $\angle ADB + \angle BDP = \angle ADC + \angle CDP$ 

 $\Rightarrow$   $\angle ADB + \angle BDP = \angle ADB + \angle CDP[Using (ii)]; <math>\Rightarrow \angle BDP = \angle CDP$ 

 $\Rightarrow$  DP bisects  $\angle$ D or AP bisects  $\angle$ D.

(iv) Since  $\triangle ABP \cong \triangle ACP[From part (ii)]$ ; BP = PC[By C.P.C.T.]....(v)

And  $\angle APB = \angle APC[By C.P.C.T.]....(vi)$ ;

Now  $\angle APB + \angle APC = 1800$ [Linear pair];  $\Rightarrow \angle APB + \angle APC = 1800$ [

 $\Rightarrow$  2 $\angle$ APB = 1800;  $\Rightarrow$   $\angle$ APB = 900

 $\Rightarrow$  AP  $\perp$  BC....(vii)

From eq. (v), we have BP = PC and from (vii), we have proved  $AP \perp B$ . So,

collectively AP is perpendicular bisector of BC.

In figure, PQRS is a square and SRT is an equilateral triangle; Prove that: (i) PT = QT; (ii) \(\neg TQR = 15^\circ\);

**SOLUTION:** PQRS is a square (Given); (i) SRT is an equilateral triangle (Given);  $\therefore \triangle PSR = 90^{\circ}$ ,  $\angle TSR = 60^{\circ}$ ;  $\Rightarrow \angle PSR + \angle TSR = 150^{\circ}$ ; similarly,  $\angle QRT = 150^{\circ}$ ; In ARST and AQRT, we have PS = QR. ARST = 400RT. 150° and ST = RT. Re-

In  $\triangle PST$  and  $\triangle QRT$ , we have PS = QR,  $\angle PST = \angle QRT = 150^{\circ}$ , and ST = RT; By SAS,  $\triangle PST \cong \triangle QRT$ ;  $\Rightarrow PT = QT$  (CPCT); Hence Proved.

(ii) In  $\triangle TQR$ , QR = RT (square and equilateral triangle on same base);  $\therefore \angle TQR = \angle OTR = x : \therefore x + x + \angle ORT = 180^{\circ} \Rightarrow 2x + 150^{\circ} = 180^{\circ} \Rightarrow 2x = 30^{\circ} \therefore x = 15^{\circ}$ .

⇒∠TQR=15°.

In the below figure, two sides AB and BC and median AM of one triangle ABC are respectively equal to sides PQ and QR and median PN of  $\Delta$ PQR; Show that  $\Delta$ ABC  $\cong \Delta$ POR;

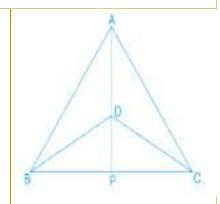

SOLUTION: In  $\triangle$ ABC and  $\triangle$ PQR, BC = QR (Given);  $\Rightarrow \frac{1}{2}$  BC =  $\frac{1}{2}$  QR;  $\Rightarrow$  BM = QN; In triangles ABM and PQN, we have AB = PQ (Given); BM = QN (Proved above); AM = PN (Given);  $\therefore \triangle$ ABM  $\cong \triangle$ PQN (By SSS congruence criterion);  $\Rightarrow \angle$ B =  $\angle$ Q (By CPCT): Now, in triangles  $\triangle$ BC and PQR, we have  $\triangle$ B = PQ

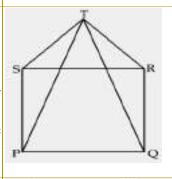

⇒∠B = ∠Q (By CPCT); Now, in triangles ABC and PQR, we have AB = PQ (Given); ∠B = ∠Q (Proved above); BC = QR (Given); ∴  $\triangle$ ABC  $\cong$   $\triangle$ PQR (By

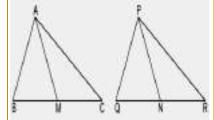

SAS congruence criterion);

**SOLUTION:** Given: Two triangles  $\triangle ABC$  and  $\triangle DEF$  such that  $\angle B = \angle E$ ,  $\angle C = \angle F$ , and BC = EF;

To prove:  $\triangle ABC \cong \triangle DEF$ ;

Proof: We prove the result in the following cases;

Case I: If AB = DE, then in  $\triangle$ ABC and  $\triangle$ DEF, we have AB = DE [by supposition]; BC = EF [given];  $\angle$ B =  $\angle$ E [given]; Thus,  $\triangle$ ABC  $\cong$  $\triangle$ DEF [SAS criterion];

Case II: If AB < DE, take a point G on ED such that EG = AB; join GF;

In  $\triangle$ ABC and  $\triangle$ GEF, we have AB = GE [by supposition]; BC = EF [given];  $\angle$ B =  $\angle$ E [given];

Thus,  $\triangle ABC \cong \triangle GEF$  [SAS criterion];  $\angle ACB = \angle GFE$  [CPCT]; But  $\angle ACB = \angle DFE$  [given];

Therefore,  $\angle$ GFE =  $\angle$ DFE;

ABC is a right-angled triangle such that AB = AC and bisector of angle C intersects the side AB at D:

Prove: AC + AD = BC:

**SOLUTION**: Given:  $\triangle$ ABC is right-angled such that AB = AC and CD is the angle bisector of  $\angle$ C; Construction: Draw DE  $\perp$  BC;

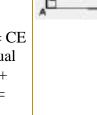

Proof: In right-angled triangle ABC, we have AB = AC [Given];  $\therefore$  BC is hypotenuse (since hypotenuse is the largest side);  $\Rightarrow \angle A = 90^{\circ}$  (angle opposite hypotenuse is 90°); In  $\triangle$ DAC and  $\triangle$ DEC, we have  $\angle A = \angle 3 = 90^{\circ}$ ;  $\angle 1 = \angle 2$  [Since CD is angle bisector of  $\angle$ C]; DC = DC [Common side];

So, by AAS criterion,  $\triangle DAC \cong \triangle DEC$ ;  $\therefore DA = DE ...(1)$  [CPCT]; and CA = CE ...(2) [CPCT]; In  $\triangle BAC$ , AB = AC [Given]  $\Rightarrow \angle C = \angle B$  [Angles opposite equal sides are equal]; Now,  $\angle A + \angle B + \angle C = 180^{\circ}$  [Angle sum property];  $\Rightarrow 90^{\circ} + \angle B + \angle B = 180^{\circ} \Rightarrow 2\angle B = 90^{\circ} \Rightarrow \angle B = 45^{\circ}$ ; Now, in  $\triangle BED$ ,  $\angle 4 + \angle 5 + \angle B = 180^{\circ}$ 

 $180^{\circ}$ ;  $\Rightarrow 90^{\circ} + \angle 5 + 45^{\circ} = 180^{\circ} \Rightarrow \angle 5 = 45^{\circ} \Rightarrow \angle B = \angle 5$ ;

 $\Rightarrow$  DE = BE ...(3) [Sides opposite equal angles];

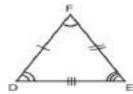

From (1) and (3),  $DA = DE = BE \dots (4)$ ; Now,  $BC = CE + BE \Rightarrow BC = AC + AD$  [From (2), (3), and (4)];  $\therefore AC + AD = BC$ ; Hence proved;

# CASE BASED QUESTIONS (04 MARKS QUUESTIONS)

Truss bridges are formed with a structure of connected elements that form triangular structures to make up the bridge; Trusses are the triangles that connect to the top and bottom cord and two end posts; You can see that some triangular shapes are shown in the picture and are represented as  $\triangle ABC$ ,  $\triangle CAD$ , and  $\triangle BEA$ ; If AB = CD and AD = CB, then prove  $\triangle ABC \cong \triangle CDA$ .

**SOLUTION**(a): In  $\triangle$ ABC and  $\triangle$ CDA, AB = CD [Given]; AD = CB [Given]; AC = CA [Common]; So, by SSS congruence rule,  $\triangle$ ABC  $\cong$   $\triangle$ CDA;

(b) If AB = 7.5 m, AC = 4.5 m, and BC = 5 m, find the perimeter of  $\triangle$ ACD if  $\triangle$ ABC  $\cong$   $\triangle$ CDA Perimeter of  $\triangle$ ABC = Perimeter of  $\triangle$ CDA = (7.5 + 4.5 + 5) m = 17 m;

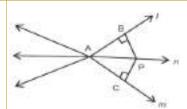

(c) If  $\triangle ABC \cong \triangle FDE$ , AB = 5 cm,  $\angle B = 40^{\circ}$ , and  $\angle A = 80^{\circ}$ , then find the length of DF and  $\angle E$  Given:  $\triangle ABC \cong \triangle FDE$ ; AB = 5 cm;  $\angle B = 40^{\circ}$ ;  $\angle A = 80^{\circ}$ ;

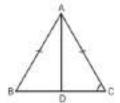

Since  $\triangle FDE \cong \triangle ABC$ , DF = AB = 5 cm [By CPCT];

 $\angle E = \angle C = 180^{\circ} - (\angle A + \angle B) = 180^{\circ} - (80^{\circ} + 40^{\circ}) = 60^{\circ};$ 

Hence, DF = 5 cm;  $\angle$ E = 60°;

To check the understanding of the students of Class IX on triangles, the Mathematics teacher wrote some questions on the blackboard and asked the students to read them carefully and answer the following:

**SOLUTION:**(a) In the figure, P is a point equidistant from the lines 1 and m intersecting at point A; Let us consider  $\triangle PAB$  and  $\triangle PAC$ ; Here, PB = PC [Perpendicular distances];  $\angle PBA = \angle PCA = 90^{\circ}$ ; PA = PA [Common];

So,  $\triangle PAB \cong \triangle PAC$  [By RHS congruence rule];  $\Rightarrow \angle BAP = \angle CAP$  [By CPCT];

(b) In  $\triangle ABC$ , if AB = AC and BD = DC; We have AB = AC, BD = CD, and AD = AD [Common];

So,  $\triangle ABD \cong \triangle ACD$  [By SSS congruence rule];  $\Rightarrow \angle ADB = \angle ADC$  [By CPCT];

Since BDC is a straight line,  $\angle ADB + \angle ADC = 180^{\circ} \Rightarrow 2\angle ADC = 180^{\circ} \Rightarrow \angle ADC = 90^{\circ}$ ;

(c)  $\triangle$ LMN is an isosceles triangle where LM = LN and LO is the angle bisector of  $\angle$ MLN;

Given  $LM = LN \Rightarrow \angle M = \angle N ...(i)$ ; Also,  $\angle MLO = \angle NLO ...(ii)$ ;

In  $\triangle$ MLO and  $\triangle$ NLO:  $\angle$ OML =  $\angle$ ONL; LM = LN;  $\angle$ MLO =  $\angle$ NLO;

So,  $\triangle$ MLO  $\cong \triangle$ NLO [By ASA congruence rule];  $\Rightarrow$  OM = ON [By CPCT];

Hence, point O is the midpoint of side MN.

Ashok is studying in 9th class in Govt School, Chhatarpur. Once he was at his home and was doing his geometry homework. He was trying to measure three angles of a triangle using the Dee, but his dee was old and his Dee's numbers were erased and the lines on the dee were visible. Let us help Ashok to find the angles of the triangle. He found that the second angle of the triangle was three times as large as the first. The measure of the third angle is double of the first angle. Now answer the following questions:

- ? What was the value of the first angle?
- ? What was the value of the third angle?
- **?** OR What was the value of the second angle?
- ? What was the sum of all three angles measured by Ashok using Dee?
- ANSWER Key:
  - ✓ 30°
  - ✓ 60° OR 90°
  - ✓ 180°

#### HOTS

- S is any point in the interior of  $\triangle$  PQR. Show that SQ + SR < PQ + PR. SOLUTION: Produce QS to meet PR in T In  $\triangle$ PQT,
  - $PQ + PT > QT \dots [As the sum of any two sides of a triangle is greater than the third side]$

PQ + PT > QS + ST ...[As QT = QS + ST] ...(1)

In  $\triangle$ SRT,TR + ST > SR ...[As the sum of any two sides of a triangle is greater than the third side] ...(2)

Adding (1) and (2)

PQ + PT + TR + ST > QS = ST + SR;  $\therefore PQ + PR + ST > QS + ST + SR$  $\therefore PO + PR > QS + SR$ ;  $\therefore SO + SR < PO + PR$ .

AC = 2BC

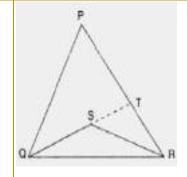

**SOLUTION:** Produce CB to a point D such that BC = BD and join AD.

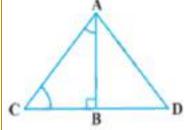

In  $\triangle$ ABC and  $\triangle$ ABD, we have BC = BD (By construction)

AB = AB (Same side);  $\angle ABC = \angle ABD$  (Each of 90°)

Therefore,  $\triangle$  ABC  $\cong$   $\triangle$ ABD (SAS); So,  $\angle$ CAB =  $\angle$ DAB ......(1)

and AC = AD....(2)

and  $\angle ACD = \angle ADB = 2x [From (2), AC = AD] ...(4)$ That is,  $\triangle$  ACD is an equilateral triangle. [From (3) and(4)] or AC = CD, i.e., AC = 2 BC (Since BC = BD) If  $\triangle ABC \cong \triangle FDE$  and AB = 5 cm,  $\angle B = 40^{\circ}$  and  $\angle A = 80^{\circ}$ . Then which of the following is true? DF = 5 cm.  $\angle$ E = 60° 3. DF = 5 cm.  $\angle$ F = 60°  $DE = 5 \text{ cm}, \angle E = 60^{\circ} \text{ 4.DE} = 5 \text{ cm}, \angle D = 40^{\circ}$ **SOLUTION:** (1) DF = 5 cm,  $\angle$ E = 60°Given that: In  $\triangle$ ABC, AB = 5 cm,  $\angle$ B = 40° and  $\angle$ A = 80° Using angles sum property of triangle, we have  $\angle A + \angle B + \angle C = 180^{\circ}$  $\Rightarrow 80^{\circ} + 40^{\circ} + \angle C = 180$ ;  $\Rightarrow 120^{\circ} + \angle C = 180^{\circ}$  [::  $\angle B = 40^{\circ}$  and  $\angle A = 80^{\circ}$ ];  $\Rightarrow \angle C = 180^{\circ} - 120^{\circ} \Rightarrow \angle C = 60^{\circ}$ It is given that  $\triangle ABC \cong \triangle FDE$ , so we have AB = FD, BC = DE and  $AC = FE \& \angle A = \angle F$ ,  $\angle B = \angle D$  and  $\angle C$ = ∠E  $\Rightarrow$  AB = FD = 5cm and  $\angle$ C =  $\angle$ E = 60°. In the given figure, D and E are points on side BC of a  $\triangle$ ABC such that BD = CE and AD = AE. Show that  $\triangle ABD \cong \triangle ACE$ . **SOLUTION:** Given:  $\triangle$ ABC in which BD = CE and AD = AE. To Prove:  $\triangle ABD \cong \triangle ACE$  Proof: In  $\triangle ADE$ , we have AD = AE [Given]  $\Rightarrow \angle 2 = 1$ : Angle opposite to equal sides of a triangle are equal Now,  $\angle 1+\angle 3=180\circ ...(1)$  [Linear pair axiom]  $\angle 2+\angle 4=180\circ ...(2)$  [Linear pair axiom] From equations (1) and (2), we get $\angle 1+\angle 3=\angle 2+\angle 4\Rightarrow \angle 3=\angle 4$  [ $\because \angle 1=\angle 2$ ] Now, in  $\triangle$ ABD and  $\triangle$ ACE, we have AD = AE [Given] $\angle$ 3= $\angle$ 4 [Proved above] BD = CE [Given]So, by SAS criterion of congruence, we have  $\triangle ABD \cong \triangle ACE$  Hence, proved. ABC is a right angled triangle such that AB = AC and bisector of angle C intersects the side AB at D. Prove that AC + AD = BC. Given:  $\triangle$  ABC is a right angled such that AB = AC and CD is the angular bisector of  $\angle C$ . To prove: AC + AD = BC; Construction: Draw  $DE \perp BC$ ; Proof: In right angled triangle ABC, we have AB = AC. [Given] ∴ BC is hypotenuse (since, hypotenuse is the largest side)  $\Rightarrow \angle A=90$  (angle opposite to hypotenuse is 90°) In  $\triangle DAC$  and  $\triangle DEC$ , we have :- $\angle A=\angle 3$  [: Each Equal to 90°]  $\angle 1 = \angle 2$ . [Since, CD is angular bisector of  $\angle C$ ]; DC = DC. [Common side] So, by AAS criterion of congruency of triangles, we have :- $\Delta DAC \cong \Delta DEC$  $\therefore$  DA = DE ......(1) [CPCT]; And, CA = CE...(2) [CPCT] In  $\triangle BAC$ , we have :-AB = AC. [Given]  $\Rightarrow \angle C = \angle B$ : Angles opposite to equal sides of a triangle are equal Now  $\angle A + \angle B + \angle C = 180 \circ [Angle sum property of a triangle]$  $\Rightarrow 90 \circ + \angle B + \angle B = 180 \circ [\because \angle B = \angle C]; \Rightarrow 2\angle B = 90 \circ \Rightarrow \angle B = 90 \circ 2 = 45 \circ$ Now, in  $\angle BED$  we have :- $\Rightarrow \angle 4+\angle 5+\angle B=1800$  [Angle sum property of a triangle]  $\Rightarrow 90 \circ + \angle 5 + \angle 45 = 180 \circ [$  Since,  $\angle B = 45 \circ ] \Rightarrow \angle 5 = 180 \circ -135 \circ \Rightarrow \angle 5 = 45 \circ \therefore \angle B = \angle 5$ ⇒DE=BE ...(3) [ Since, sides opposite to equal angles of triangle are equal] From (1) and (3), we get DA = DE = BE...(4)Now, BC = CE + BE $\Rightarrow$ BC=AC+AD. [ From (2), (3) & (4) ]  $\Rightarrow$ AC+AD=BC Hence proved. **EXERCISE** MULTIPLE CHOICE QUESTIONS

In  $\triangle ABC$ ,  $\angle B = \angle C$  and ray AX bisects the exterior angle  $\angle DAC$ . If  $\angle DAX = 70^{\circ}$ , then  $\angle ACB = 10^{\circ}$ 

(d)  $55^{\circ}$ 

Thus,  $\angle CAD = \angle CAB + \angle BAD = x + x = 2x$  [From (1)] ....(3)

(c)  $70^{\circ}$ 

(b)  $90^{\circ}$ 

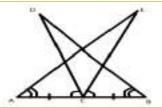

(a) 35°

In a triangle, an exterior angle at a vertex is 95° and its one of the interior opposite angle is 550, then the measure of the other interior angle is (a) 55° (b)  $85^{\circ}$ (c)  $40^{\circ}$ (d)  $9.0^{\circ}$ If the sides of a triangle are produced in order, then the sum of the three exterior angles so formed is (b)  $180^{\circ}$ (a)  $90^{\circ}$ (c)  $270^{\circ}$ (d)  $360^{\circ}$ In  $\triangle ABC$ , if  $\angle A = 100^{\circ}$ , AD bisects  $\angle A$  and AD  $\perp BC$ . Then,  $\angle B =$ (b)  $90^{\circ}$ (c)  $40^{\circ}$ (a)  $50^{\circ}$ (d) 1000 An exterior angle of a triangle is 1080 and its interior opposite angles are in the ratio 4:5. The angles of the triangle are (a)  $48^{\circ}$ ,  $60^{\circ}$ ,  $72^{\circ}$ (b)  $50^{\circ}$ ,  $60^{\circ}$ ,  $70^{\circ}$ (c)  $52^{\circ}$ ,  $56^{\circ}$ ,  $72^{\circ}$ (d)  $42^{\circ}$ ,  $60^{\circ}$ ,  $76^{\circ}$ ASSERTION - REASON BASED QUESTIONS Each of the following questions contains STATEMENT-1 (Assertion) and STATEMENT-2 (Reason) and has the following four choices (a), (b), (c) and (d) only one of which is the correct answer. Mark the correct choice. (a) Statement-1 is true, Statement-2 is true; Statement-2 is a correct explanation for Statement-1. (b) Statement-1 is true, Statement-2 is true; Statement-2 is not a correct explanation for Statement-1. (c) Statement-1 is true, Statement-2 is false. (d) Statement-1 is false, Statement-2 is true Statement-1 (A): In an equilateral triangle ABC, if AD is the median, then AB + AC > 2 AD Statement-2 (R): In a right triangle, hypotenuse is the longest side. Statement-1 (A): The sum of any two sides of a triangle is greater than the third side. Statement-2 (R): It is possible to construct a triangle with lengths of its sides as 4 cm, 3 cm and 7 cm. Statement-1 (A): IF $\triangle$  ABC  $\cong \triangle$  RPO, then BC = OR Statement-2 (R): Corresponding parts of two congruent triangle are equal. Statement-1 (A): If any two angles and a non-included side of one triangle are equal to the corresponding angles and side of the another triangle, then the two triangles are congruent. Statement-2 (R): If two angles and a side of one triangle are equal to two angles and a side of another triangle, then the two triangles must be congruent. Statement-1 (A): If two sides and the included angle of one triangle are equal to the corresponding sides and the included angle of the other triangle, then the two triangles are congruent. Statement-2 (R): If two sides and an angle of one triangle are equal to two sides and an angle of another triangle, then the two triangles are congruent. VERY SHORT ANSWER TYPE QUESTIONS In the figure,  $\triangle ABC$  and  $\triangle DBC$  are two isosceles triangles on the same base Prove that  $\angle ABD = \angle ACD$ . In the figure below, the diagonal AC of quadrilateral ABCD bisects ∠BAD and  $\angle$ BCD. Prove that BC = CD. In figure  $\angle B = \angle E$ , BD = CE and  $\angle 1 = \angle 2$ . Show  $\triangle ABC \cong \triangle AED$ . ABC is an isosceles triangle with AB = AC. Draw AP $\perp$ BC. Show that  $\angle$ B =  $\angle$ PS is an altitude of an isosceles triangle PQR in which PQ = PR. Show that PS bisects  $\angle P$ . SHORT ANSWER TYPE QUESTIONS PQR is a triangle in which PQ = PR and S is any point on the side PQ. Through S, a line is drawn parallel to QR and intersecting PR at T. Prove that PS = PT. In a  $\triangle$ ABC, it is given that AB = AC and the bisectors of  $\angle$ B and  $\angle$ C intersect at O. If M is a point on BO

- produced, prove that  $\angle MOC = \angle ABC$ .
- Pis a point on the bisector of an  $\angle$  ABC. If the line through P parallel to AB meets BC at Q, prove that triangle BPQ is isosceles.
- A point O is taken inside an equilateral four sided figure ABCD such that its distances from the angular points D and B are equal. Show that AO and OC are in one and the same straight line.
- ABCD is a quadrilateral such that AB = AD and CB = CD. Prove that AC is the perpendicular bisector of BD.

### LONGANSWER TYPE QUESTIONS

In the given figure, if AC = BC,  $\angle DCA = \angle ECB$  and  $\angle DBC = \angle EAC$ , then prove that BD = AE.

- ABC is a triangle right angled at C. A line through the mid-point M of hypotenuse AB and parallel to BC intersects AC at D. Show that
  - (i) D is the mid-point of AC
  - (ii) MD⊥ AC
  - (iii) CM = MA = 1/2AB.
- ABCD is a square and ABE is an equilateral triangle outside the square prove that  $\angle ACE = \frac{1}{2} \angle ABE$ .
- ABC is a triangle in which  $\angle B=2\angle C$ . D is a point on BC such that AD bisects  $\angle BAC$  and AB=CD. Prove that  $\angle BAC = 72^{\circ}$ .
- ABCD is a parallelogram, if the two diagonals are equal, find the measure of ABC.

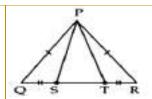

### CASE BASED QUESTIONS

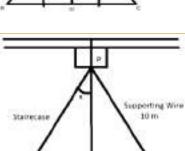

- A children's park is in the shape of isosceles triangle say PQR with PQ = PR, S and T are points on QR such that QT = RS.
  - (i). Which rule is applied to prove that congruency of APQS and APRT.
  - (ii). If PQ = 6 cm and QR = 7 cm, then perimeter of  $\Delta$ PQR is
  - (iii). If  $\angle QPR = 80^{\circ}$ , find  $\angle PQR$ .
- Neeraj has a plot in the shape of a triangle said ABC with AD as the perpendicular
  - bisector of BC such that BD = DC.
  - (i) Which rule is applied to prove the congruency of  $\triangle ABD$  and  $\triangle ACD$ ?
  - (ii) If  $\angle ABD = 50^{\circ}$ , then the value of  $\angle BAD$ .
  - (iii) In ΔADC find ∠ACD.
- In Rajesh Village there was a big pole PC. This pole was tied with a strong wire of 10 m length. Once there was a big spark on this pole, thus wires got damaged very badly. Any small fault was usually repaired with the help of a rope which normal board electricians were carrying on bicycles. This time electricians need a staircase of 10 m, so that it can reach at point P on the pole and this should make 60° with line AC.

- Q. 1. In  $\triangle PAC$  and  $\triangle PBC$  which side is common?
- O. 2. Find the value of  $\angle x$ ?
- Q. 3. In figure,  $\triangle PAC$  and  $\triangle PBC$  are congruent due to which criteria?

#### HOTS

- ΔABC and ΔDBC are two isosceles triangles on the same base BC and vertices A and D are on the same side of BC. If AD is extended to intersect BC at P, show that
  - (ii) ΔABP ≅ΔACP (i) ΔABD≅ΔACD
  - (iii) AP bisects  $\angle A$  as well as  $\angle D$ . (iv)AP is the perpendicular bisector of BC.
- If two isosceles triangles have a common base, prove that the line joining their vertices bisects them at

- In a  $\triangle PQR$ , if PQ = QR and L, M and N are the mid-points of the sides PQ, QR and RP respectively. Prove that LN = MN.
- Bisectors of angles B and C of an isosceles triangle ABC with AB = AC intersect each other at O. Show that external angle adjacent to  $\angle ABC$  is equal to  $\angle BOC$ .
- Line segment joining the mid-points M and N of parallel sides AB and DC, respectively of trapezium ABCD is perpendicular to both the sides AB and DC. Prove that AD = BC.

### VERY SHORT ANSWER TYPE QUESTIONS

- 1 In  $\triangle ABC$ , AB = AC (isosceles)  $\Rightarrow \angle ABC = \angle ACB$  ...(1)
  - In  $\triangle DBC$ , DB = DC (isosceles)  $\Rightarrow \angle CBD = \angle CDB$  ...(2)

Now,  $\angle ABD = \angle ABC - \angle CBD$ ,  $\angle ACD = \angle ACB - \angle CDB$ 

From (1) and (2):

∴∠ABD = ∠ACD

- Given AC bisects  $\angle BAD$  and  $\angle BCD$ . So in  $\triangle ABC$  and  $\triangle ADC$ :
  - $\angle BAC = \angle DAC$  (AC bisects  $\angle BAD$ ),  $\angle BCA = \angle DCA$  (AC bisects  $\angle BCD$ )

AC = AC (common side)

By ASA congruency:  $\triangle ABC \cong \triangle ADC \Rightarrow BC = CD$  (CPCT)

- 3 In  $\triangle$ ABC and  $\triangle$ AED:
  - $\angle B = \angle E$  (given), BD = CE (given),  $\angle 1 = \angle 2$  (given)

By ASA congruence:  $\therefore \triangle ABC \cong \triangle AED$ 

- In  $\triangle ABP$  and  $\triangle ACP$ : AB = AC (given)
  - $\angle APB = \angle APC = 90^{\circ} (AP \perp BC), AP = AP (common)$

By RHS congruence:  $\triangle ABP \cong \triangle ACP \Rightarrow \angle B = \angle C$  (CPCT)

In  $\triangle PQS$  and  $\triangle PRS$ : PQ = PR (given),  $\angle PSQ = \angle PSR = 90^{\circ}$  (altitude), PS = PS (common)

By RHS congruence:  $\triangle PQS \cong \triangle PRS \Rightarrow \angle QPS = \angle RPS$  Hence, PS bisects  $\angle P$ 

### SHORT ANSWER TYPE QUESTIONS

1 In  $\triangle PQR$ ,  $PQ = PR \Rightarrow$  triangle is isosceles.

ST  $\parallel$  QR (given), so by Basic Proportionality Theorem (BPT) in  $\triangle$ PQR:

PS/SQ = PT/TR

Since PQ = PR and  $ST \parallel QR$ , the segments PS and PT must also be equal.

 $\therefore$  PS = PT

- $AB = AC \Rightarrow \triangle ABC$  is isosceles  $\Rightarrow \angle B = \angle C$ 
  - OB and OC are angle bisectors ⇒∠OBC = ∠OCB

In  $\triangle BOC$ , OB and OC are angle bisectors meeting at O.

Extend BO to M. $\angle$ MOC is an exterior angle to  $\triangle$ BOC:

 $\angle MOC = \angle OCB + \angle OBC = 2\angle OBC = \angle ABC$ 

- 3 P lies on the bisector of ∠ABC  $\Rightarrow$ ∠ABP = ∠CBP
  - Line through  $P \parallel AB \Rightarrow \angle PQB = \angle ABP$  (alternate angles)

 $\angle PBQ = \angle CBP$  (since P is on bisector)

- ∴ $\angle PBQ = \angle PQB \Rightarrow \triangle BPQ$  is isosceles  $\Rightarrow BP = PQ$
- 4 Let ABCD be equilateral  $\Rightarrow$  All sides and angles equal.

Given  $OD = OB \Rightarrow O$  lies on perpendicular bisector of BD.

Diagonals of equilateral quadrilateral bisect at 90°.

- AO and OC lie along same diagonal AC.
- ∴ AO and OC lie on the same line.
- 5 In  $\triangle$ ABD and  $\triangle$ ACD:
  - AB = AD, CB = CD, AC = AC (common)
  - By SSS congruence  $\Rightarrow$  triangles are congruent.
  - BD is bisected at intersection with AC
  - Also,  $\angle BOC = 90^{\circ}$
  - ∴ AC is the perpendicular bisector of BD

### LONGANSWER TYPE QUESTIONS

- Given: AC = BC,  $\angle DCA = \angle ECB$ ,  $\angle DBC = \angle EAC$ ; In  $\triangle DBC$  and  $\triangle AEC$ :  $\angle DCA = \angle ECB$  (Given)  $\angle DBC = \angle EAC$  (Given), AC = BC (Given);  $\Rightarrow$  By ASA congruence:  $\triangle DBC \cong \triangle AEC \Rightarrow BD = AE$
- 2 (i) D is the midpoint of AC: M is midpoint of AB ;MD || BC ⇒ By midpoint theorem, D is midpoint of AC (ii) MD ⊥ AC:BC ⊥ AC (right triangle) and MD || BC ⇒ MD ⊥ AC
  - (iii) CM = MA =  $\frac{1}{2}$  AB: ;M is midpoint of AB in right triangle  $\Rightarrow$  MA = MB = MC  $\Rightarrow$  CM = MA =  $\frac{1}{2}$  AB
- 3 ABCD is a square ⇒∠ABC = 90°; ABE is equilateral ⇒∠ABE = 60° ∠ACE lies between diagonal AC and AE ⇒ Symmetry implies ∠ACE = 30° ⇒∠ACE = ½ ∠ABE
- 4 Let  $\angle C = x$ , then  $\angle B = 2x$ ;  $\angle A + 2x + x = 180^{\circ} \Rightarrow \angle A = 180^{\circ} 3x$ AD bisects  $\angle A$  and  $AB = CD \Rightarrow$  Using triangle properties and angle bisector theorem  $\Rightarrow \angle A = 72^{\circ}$
- In a parallelogram, diagonals are equal only if it's a rectangle  $\Rightarrow$  ABCD is a rectangle  $\Rightarrow \triangle$ ABC = 90°

#### CASE BASED OUESTIONS

- 1 1. (i) Ans. SAS (ii) Ans. 19 cm (iii) Ans. 50°
  - 2. (i)Ans. SAS (ii) Ans. 40° (iii) Ans. 50°
  - 3.(i) PC (ii) x = 60 quad 9 hots (iii)  $\triangle PAC \cong \triangle PBC$  by the SAS (Side-Angle-Side) congruence criteria.

#### HOTS

- 1 (i) Since AB = AC and DB = DC (isosceles triangles on same base), and AD is common, by SSS congruence,  $\triangle ABD \cong \triangle ACD$ .
  - (ii) From above,  $\triangle ABD \cong \triangle ACD$  implies  $\angle ABD = \angle ACD$ . With BP = CP and AD common,  $\triangle ABP \cong \triangle ACP$  by SAS.
  - (iii) Since  $\triangle ABP \cong \triangle ACP$ ,  $\angle BAP = \angle CAP$  and  $\angle BDP = \angle CDP$ . Thus, AP bisects  $\angle A$  and  $\angle D$ .
  - (iv) Since BP = CP and  $\angle BAP = \angle CAP$ , AP is perpendicular to BC and bisects it. So, AP is the perpendicular bisector of BC.
- 2 Let the triangles be  $\triangle ABC$  and  $\triangle DBC$  with common base BC and vertices A and D.
  - AB = AC and DB = DC (isosceles triangles). Let line AD intersect BC at M.
  - By symmetry and congruent triangles (e.g., ABM  $\cong$  ACM),  $\angle$ AMB = 90° and BM = MC.
  - Hence, line joining vertices bisects BC at right angles.
- Since PQ = QR and L, M are midpoints, then PL = QM.LN and MN are midlines in triangles  $\Rightarrow$  both are equal in length and parallel to side PR. Hence, LN = MN.
- Since AB = AC,  $\angle B = \angle C$ . Their angle bisectors BO and CO divide  $\angle B$  and  $\angle C$  equally. The triangle formed by BO and CO at point O implies  $\angle BOC =$  external angle adjacent to  $\angle ABC$ , due to symmetry and equality of bisected angles.
- Given: AB  $\parallel$  DC and MN  $\perp$  AB, DC. Since M and N are midpoints and MN is perpendicular to both bases, trapezium is symmetric. Hence, non-parallel sides AD and BC are equal  $\Rightarrow$  AD = BC

### **CHAPTER 8 OUADRILATERALS** CONCEPT MAP Rectangle Kite A quadrilateal with - All angles are right equal adjacent sides with unequal -Diagonals are equal opposite sides and bisect eah other Square Parallelogram - All sides are equal - Opposite sides are Quadrilaterals equal and parallel - All angles are at A quadrilateral is four - Opposite angles are right angle sided closed figure equal - Diagonals are equal Diagonal bisects and bisect each eah other other at right angle. o A pair of opposite sides is equal and parallel

- A rectangle is a parallelogram in which all angles are 90° and diagonals bisect each other and equal.
- A rhombus is a parallelogram in which diagonal bisect each other at right angles
- A square is a parallelogram in which all angles are equal and diagonal bisect each other at right angles
- Mid-point theorem: The line segment joining the midpoint of any two sides of the triangle is parallel to the third side and is half of it.
- Converse of midpoint theorem: A line through the mid-point of a side of a triangle parallel to another side bisects the third side.

### THEOREMS:

A diagonal of a parallelogram divides it into two congruent triangles.

Given llgm ABCD with diagonal AC

To prove $\triangle ABC \cong \triangle CDA$ 

Proof: In  $\triangle ABC \cong \triangle CDA$ 

 $\angle BAC = \angle ACD$  (Alternate Opp angles)

 $\angle BCA = \angle CAD$  (Alt. Int. angles)

AC = AC (COMMON)

Therefore  $\triangle ABC \cong \triangle CDA$  (ASARULE)

- In a parallelogram, opposite sides are equal and conversely
- A quadrilateral is a parallelogram if a pair of its opposite sides are equal and parallel
- In a parallelogram the diagonals bisect each other and conversely.

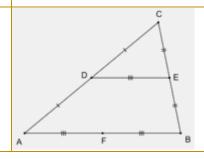

**CONVERSE OF MID-POINT THEOREM**: A line through the mid-point of a side of a triangle parallel to another side bisects the third side. (without proof) In  $\triangle$  ABC

If DE is parallel to AB i.e DE || AB

Then D and E is the midpoint of side AC and BC respectively

i.e AD= DC and BE=EC

# MULTIPLE CHOICE QUESTIONS (1 MARKS)

Three angles of a quadrilateral are 75°, 90° and 75°. The fourth angle is

(A) 90° (B) 95° (C) 105° (D) 120°

**SOLUTION:** (D) Sum of angle of quadrilateral =  $360^{\circ}$ 

 $=>75^{\circ}+90^{\circ}+75^{\circ}+fourth angle=360^{\circ}$ 

 $=> 240^{\circ}$  + fourth angle= $360^{\circ}$  =>fourth angle= $360^{\circ}$  -  $240^{\circ}$  =  $120^{\circ}$ 

The angles of a quadrilateral are in the ratio 3:4:5:6. The respective angles of the quadrilaterals are

(A)  $60^{\circ}$ ,  $80^{\circ}$ ,  $100^{\circ}$ ,  $120^{\circ}$ 

(B)  $120^{0}$ ,  $100^{0}$ ,  $80^{0}$ ,  $60^{0}$ 

(C)  $120^{0}$ ,  $60^{0}$ ,  $80^{0}$ ,  $100^{0}$ 

(D)  $80^{\circ}$ ,  $100^{\circ}$ ,  $120^{\circ}$ ,  $60^{\circ}$ 

**SOLUTION:** (A) Sum of angle of quadrilateral =  $360^{\circ}$ 

 $=>3x+4x+5x+6x=360^{\circ}$ 

 $=>18x=360^{0}$ 

angles are =  $3 \times 20 = 60^{\circ}$  $4 \times 20 = 80^{\circ}$  $5 \times 20 = 100$  $6 \times 20 = 120^{0}$ A diagonal of a rectangle is inclined to one side of the rectangle at 25°. The acute angle between the diagonals is (A)  $55^{\circ}$  (B)  $50^{\circ}$  (C)  $40^{\circ}$  (D)  $25^{\circ}$ SOLUTION: (B) AC = BD (diagonals of a rectangle are of equal) AC/2 = BD/2OA = OB $\angle ABO = 25^{\circ}$  (angle opposite of equal sides) In  $\triangle$  AOB, angle sum property of  $\triangle$  $\angle OAB + \angle AOB + \angle ABO = 180^{\circ}$  $250 + \angle AOB + 250 = 180^{\circ}$  $500 + \angle AOB = 180^{\circ}$  $\angle AOB = 180 - 50 = 130^{\circ}$ Acute angle between the diagonal  $\angle AOB + \angle COB = 180$  (straight angle)  $130^0 + \angle COB = 180$  $\angle COB = 180 - 130 = 50^{\circ}$ ABCD is a rhombus such that  $\angle ACB = 40^{\circ}$ . Then  $\angle ADB$  is (A) 40° (B) 45° (C) 50° (D) 60° SOLUTION: (C) As AD || BC  $\angle DAC = \angle BCA = 40^{\circ}$  (Alternate interior angles)  $\angle DAO = 40^{\circ}$  $\angle AOD = 90^{\circ}$  (Diagonals of a rhombus are  $\perp$  to each other) In triangle DOA, angle sum property of triangle  $\angle AOD + \angle ADO + \angle DAO = 180^{\circ}$  $90^{\circ} + \angle ADO + 40^{\circ} = 180^{\circ}$  $130^{\circ} + \angle ADO = 180^{\circ}$  $\angle ADO = 180^{\circ} - 130^{\circ}$  $\angle ADO = 50^{\circ} = > \angle ADB = 50^{\circ}$ The quadrilateral formed by joining the mid-points of the sides of a quadrilateral A Q PORS, taken in order, is a rectangle, if (A) PQRS is a rectangle(B) PQRS is a parallelogram (C) diagonals of PQRS are perpendicular (D) diagonals of PQRS are equal. SOLUTION: (C) In  $\triangle$ QSR, B is the mid-point of QR and C is the mid-point of SR. D  $BC = \frac{1}{2} SQ$  (mid-point theorem) BC||SQ Hence, UO||CT .....(1) In  $\triangle PSR$ , C is the mid-point of SR and D is the mid-point of PS.  $CD = \frac{1}{2} PR$  (mid-point theorem)  $CD\|PR$ . Hence,  $UC\|OT$ .....(2)

From (1)and(2), UOTC is a parallelogram Since ABCD is a rectangle,  $\angle C=90\circ$ .

 $\angle C = \angle O = 90$  (opposite angle of llgm UOTC)

Since∠O=90∘we can easily say that PR⊥QS(We all know that the diagonals of a

	rhombus are perpendicular to each other)	
	Hence, the diagonals of PQRS are perpendicular.	
(	The consecutive angles of a parallelogram are	
	(A) Complementary (B) Supplementary (C) Equal (D) None	
	SOLUTION:(B) Supplementary	
,	In the given figure, ABCD is a parallelogram. If $\angle C = 65^{\circ}$ , then $(\angle B + \angle D)$ is	D/C
	equal to	/ 65' \
	(A) 180° (B) 115° (C) 155° (D) 230°	/ /
	<b>SOLUTION:</b> (D) Sum of angle of parallelogram = $360^{\circ}$	/ /
	$=>65^{\circ}+\angle B+65^{\circ}+\angle D=360^{\circ}$	
	$=> 130^{0} + \angle B + \angle D = 360^{0}$	A/B
	$=> \angle B + \angle D = 360^{\circ} - 130^{\circ} = 230^{\circ}$	_
8	In the given figure, find BD, if DE     BC.	â
	(A) 2 cm (B) 1 cm (C) 3 cm (D) none of these	2 cm 1 cm
	<b>SOLUTION:</b> (A) E is the midpoint of the triangle ABC, DE	D/E

Two angles of a quadrilateral are 60° and 70° and other two angles are in the ratio 8 : 15, then the remaining two angles are

(A) 140°, 90° (B) 100°, 130° (C) 80°, 150° (D) 70°, 160°

BC. By converse of midpoint theorem AD = BD = 2cm

**SOLUTION:** (C) Sum of angle of quadrilateral =  $360^{\circ}$ 

$$=>60^{\circ}+70^{\circ}+8x+15x=360^{\circ}$$
;  $=>130^{\circ}+23x=360^{\circ}$ ;  $=>23x=360^{\circ}-130^{\circ}=230^{\circ}$ 

=> x = 
$$\frac{230}{23}$$
 = 10; Therefore other two angles are 8 x 10 = 80° and 15 x 10 = 150°

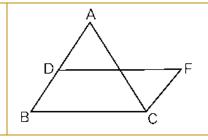

10 D and E are the mid-points of the sides AB and AC respectively of  $\triangle$ ABC. DE is produced to F. To prove that CF is equal and parallel to DA, we need an additional information which is

SOLUTION:(C) DE = EF

From the SAS congruence rule

 $\triangle ADE \cong \triangle CFE$ 

# ASSERTION (A):AND REASON TYPE (1 MARKS)

In the following questions, a statement of Assertion (A):(A) is followed by a statement of Reason (R). Choose the correct answer out of the following choices.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is not the correct explanation of A.
- (C) A is true but R is false.
- (D) A is false but R is true

Assertion (A):: The angles of a quadrilateral are  $x^0$ ,  $(x - 10)^0$ ,  $(x + 30)^0$  and  $(2x)^0$ , the smallest angle is equal to  $58^0$ .

Reason(R): Sum of the angles of a quadrilateral is  $360^{\circ}$ 

SOLUTION:(A)

Assertion (A):: If the diagonals of a parallelogram ABCD are equal, then  $\angle ABC = 90^{\circ}$ .

Reason(R): If the diagonals of a parallelogram are equal, it becomes a rectangle.

SOLUTION: (A)

3 Assertion (A):: A parallelogram consists of two congruent triangles.

Reason(R): Diagonal of a parallelogram divides it into two congruent triangles.

SOLUTION:(A)

Assertion (A):: ABCD is a square. AC and BD intersect at O. The measure of  $\angle$ ABC=90 $^{\circ}$ .

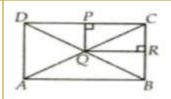

Reason(R): Diagonals of a square bisect each other at right angle

SOLUTION:(B)

Assertion (A):: ABCD and PQRC are rectangles and Q is a midpoint of AC. Then DP = PC

Reason(R): The line segment joining the midpoint of any two sides of a triangle is parallel to the third side and equal to half of it.

SOLUTION:(B)

6 Assertion (A):: In  $\triangle$ ABC, median AD is produced to X such that AD = DX. Then ABXC is a parallelogram.

Reason(R): Diagonals AX and BC bisect each other at right angles.

SOLUTION:(C)

Assertion (A):: The consecutive sides of a quadrilateral have one common point.

Reason(R): The opposite sides of a quadrilateral have two common point.

SOLUTION:(C)

Assertion (A):: Two opposite angles of a parallelogram are  $(3x-2)^0$  and  $(50-x)^0$ . The measure of one of the angle is  $37^0$ 

Reason(R): Opposite angles of a parallelogram are equal.

SOLUTION: (A)

Assertion (A):: If the angles of a quadrilateral are in the ratio 2:3:7:6, then the measure of angles are  $40^{\circ}$ ,  $60^{\circ}$ ,  $140^{\circ}$   $120^{\circ}$ , respectively.

Reason(R): The sum of the angles of a quadrilateral is  $360^{\circ}$ .

SOLUTION: (A)

Assertion (A):: In  $\triangle ABC$ , E and F are the midpoints of AC and AB respectively. The altitude AP at BC intersects FE at Q. Then, AQ = QP.

Reason(R): Q is the midpoint of AP.

SOLUTION: (A)

### **VERY SHORT ANSWER TYPE (2 MARKS)**

Angles of a quadrilateral are in the ratio 3:4:4:7. Find all the angles of the quadrilateral.

**SOLUTION:** Sum of angle of quadrilateral =  $360^{\circ}$ ; =>3x +4x+4x+7x=360°; =>  $18x=360^{\circ}$ ; =>  $x=\frac{360}{18}=20$ 

First angle 3 x  $20 = 60^{\circ}$ ; Second angle = 4 x  $20 = 80^{\circ}$ ; Third angle = 4 x  $20 = 80^{\circ}$ ;

Fourth angle =  $7 \times 20 = 140^{\circ}$ 

Two consecutive angles of a parallelogram are  $(x + 60)^{\circ}$  and  $(2x + 30)^{\circ}$ . What special name can you give to this parallelogram?

SOLUTION: Sum of consecutive angles of a parallelogram =  $180^{\circ}$ 

$$x + 60 + 2x + 30 = 180$$
;  $3x + 90 = 180$ ;  $3x = 180 - 90$ ;  $3x = 90$ ;  $x = \frac{90}{3} = 30$ 

first angle =  $30 + 60 = 90^{\circ}$ 

second angle =  $2 \times 30 + 30 = 90^{0}$ 

this parallelogram is a rectangle.

3 If one angle of a parallelogram is 30° less than the smallest angle, then find the measure of each angle.

**SOLUTION**: let the smallest angle be x

Other angle = x - 30

Opposite angles of parallelogram are equal

Sum of all angles of parallelogram = 360

$$x + (x-30) + x + (x-30) = 360$$

$$4x - 60 = 360$$

$$4x = 360 + 60 = 420$$

$$x = \frac{420}{4} = 105$$

first angle = 105

second angle 105 - 30 = 75

third angle = 105

fourth angle = 105 - 30 = 75

4	If the diagonals of a parallelogram are equal, then show that it is a rectangle.  SOLUTION:  Given: Let ABCD be a parallelogram in which AC= BD	D C
	To Prove : ABCD is a rectangle ; Proof: In $\triangle$ ABC and $\triangle$ DCB	0
	AB= DC (Opposite side of parallelogram)	$\times$
	BC = BC (common); $AC = BD$ (Given)	
	$\Delta ABC \cong \Delta DCB$ (SSS congruency)	
	$\angle ABC = \angle DCB (CPCT) (1)$	A B
	Now AB Il DC (Opposite sides of parallelogram)	
	$\angle B + \angle C = 180$ (adjacent angle of parallelogram are supplementary)	
	$2\angle B = 180 \text{ (from 1)}; \angle B = \frac{180}{3} = 90$

### SHORT ANSWER TYPE QUESTION (3 MARKS)

In the given figure, ABCD and PQRC are rectangles and Q is the mid-point of AC.

Prove that: (i) DP = PC (ii)  $PR = \frac{1}{2}AC$ 

**SOLUTION**: (i) $\angle P = \angle D = 90$  (angle of rectangle)

Therefore, PQ II AD

In  $\triangle$  DAC, Q is the midpoint of AC and PQ ll AD

Therefore, P is the midpoint of DC

DP =DC (by converse of midpoint theorem)

(ii) similarly, R is the midpoint of BC and Q is the midpoint of AC

In Δ BDC

RP ll BD and PR =  $\frac{1}{2}$  BD (bymid point theorem)

 $PR = \frac{1}{2} BD$  (diagonal of rectangle are equal)

 $PR = \frac{1}{2} AC$ 

**SOLUTION**: Given, ABCD is a parallelogram

X and Y are the midpoints of the opposite sides AD and BC of the parallelogram

BX and DY intersect AC at P and Q, To prove AP = PQ = QC

Proof :AD = BC ----- (1) (opposite sides of a parallelogram)

AX = DX (X is the midpoint of AD)

So, AD = AX + DX; AD = DX + DX; AD = 2DX ----- (2)

BY = CY (Y is the midpoint of BC)

So, 
$$BC = BY + CY$$
;  $BC = BY + BY$ ;  $BC = 2BY$  -----(3)

Using (2) and (3) in (1), ; 2DX = 2BY ; DX = BY

We know that a pair of opposite sides are equal and parallel in a parallelogram.

So, DX || BY, This implies XBYD is a parallelogram

So, PX || OD , From triangle AOD ; X is the midpoint of AD, and XP || PO

By converse of midpoint theorem; AP = PQ ----- (4)

Similarly, from triangle CPB; CQ = PQ -----(5)

From (4) and (5), AP = PQ = CQ; Therefore, AP = PQ = QC

**SOLUTION:** Given, ABCD is a parallelogram. ; AX and CY are the bisectors of the angles A and C. ; To prove AX  $\parallel$  CY ; Proof:  $\angle$ DAB = 2x

 $\angle DCB = 2y$ ;  $\angle A = \angle C$  (opposite angles of a parallelogram are equal)

2x = 2y; x = y(1); As BC || AD, XC || AY

 $\angle XCY = \angle CYD = y$  [Alternate angles] (2)

 $\angle CYD = x$  (from 1 and 2);  $\angle XAY = x$ ; As  $\angle XAY$  and  $\angle CYD$  are corresponding angles; AX || CY; Therefore, AX is parallel to CY.

SOLUTION:

Given: ABCD is a parallelogram

E and F are points on diagonal AC of parallelogram ABCD such that AE = CF

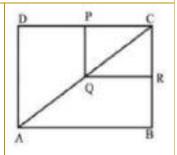

To show: BFDE is a parallelogram.

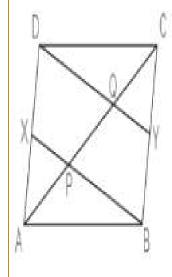

Construction: Join the other diagonal BD of the parallelogram.

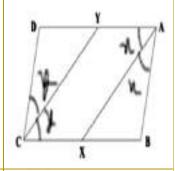

The diagonal BD meets AC at O

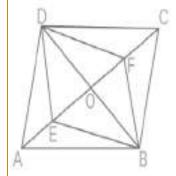

Proof: OA = OC (diagonals of a parallelogram bisect each other); OD = OB

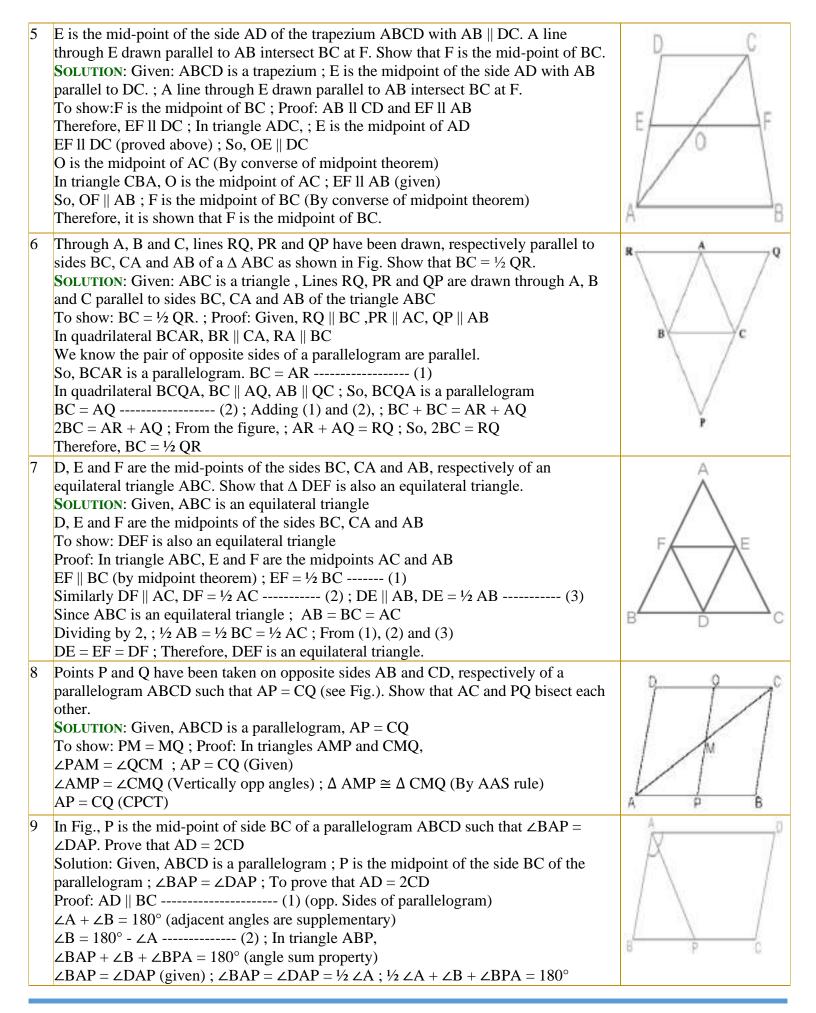

AE = CF (given); OA - AE = OE; OC - CF = OF; OE = OF; Therefore, BFDE is a parallelogram as the diagonals EF and BD bisect each other at O.

 $\frac{1}{2} \angle A + 180^{\circ} - \angle A + \angle BPA = 180^{\circ}; \angle BPA - \frac{1}{2} \angle A = 0$ 

 $\angle BPA = \frac{1}{2} \angle A$ ; So,  $\angle BPA = \angle BAP$ 

AB = BP (sides opposite to equal angles are equal)

Multiplying by 2 on both sides, 2AB = 2BP; BP = CP(P) is the midpoint of BC)

BC = BP + PC; BC = BP + BP; BC = 2BP; So, 2AB = BC

ABCD is a parallelogram, AB = CD and AD = BC; 2CD = AD HENCE PROVED

10 Show that the diagonals of a rhombus are perpendicular to each other.

**SOLUTION**: Given: ABCD is a rhomus

To Prove:  $AC \perp BD$ ; Proof: Since ABCD is a rhombus AB = BC = CD = AD

In  $\triangle$  AOB and  $\triangle$  BOC; OA = OC (diagonal of parallelogram bisect)

OB = OB (common); AB = CB (sides of a rhomus)

 $\triangle$  AOB  $\cong$   $\triangle$  BOC (By SSS rule);  $\angle$ AOB =  $\angle$ COB (CPCT) (1)

 $\angle AOB + \angle COB = 180$  (straight angle)

 $2\angle AOB = 180$ ;  $\angle AOB = 180 / 2 = 90$ 

 $\angle AOB = \angle COD = 90$  (Vertically opposite angle);  $\angle BOC = \angle AOD = 90$ 

Therefore, diagonals of rhombus bisect each other at right angle

#### SOLUTION:

Given: a rhombus ABCD and P, Q, R and S are the midpoints of the sides AB, BC, CD and AD. To prove: PQRS is a rectangle

Construction: Join the diagonals AC and BD of the rhombus ABCD.

Proof: In triangle ABD, Since S and P are the midpoints of the sides AD and AB. By midpoint theorem

$$SP \parallel BD$$
 ----- (1);  $SP = \frac{1}{2}BD$  ----- (2); Similarly,  $RQ \parallel BD$ 

 $RQ = \frac{1}{2} BD$  -----(3); From (2) and (3),

SP = RQ Also, SP || RQ; Therefore, PQRS is a parallelogram

We know that the diagonals of a rhombus are perpendicular.

So, AC $\perp$  BD (4); In triangle BAC, ; PQ || AC ----- (5)

From (1), (4) and (5), ; SP  $\perp$ PQ i.e.,  $\angle$ SPQ = 90°; We know that a rectangle is a quadrilateral with four right angles. The opposite sides are parallel and equal to each other. Therefore, PQRS is a rectangle.

#### SOLUTION:

Given: ABCD is a parallelogram and  $., \angle DAC = \angle CAB$ 

To prove:  $., \angle DCA = \angle ACB$ 

Proof:  $\angle CAB = \angle CAD$  ----- (1) (AC bisects angle A)

The opposite sides of a parallelogram are parallel and equal.

AB||CD and AC is a transversal, AD||BC and AC is transversal

 $\angle CAB = \angle ACD$  ----- (2) (Alternate interior angles)

 $\angle DAC = \angle ACB$  ----- (3) (Alternate interior angles)

From (1), (2) and (3),  $\angle BCA = \angle DCA$ ; This implies AC bisects the opposite angle C.

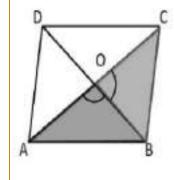

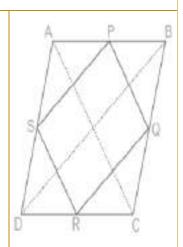

**SOLUTION**: Given: CAB is an isosceles triangle and ADEF is a square and  $\angle A = 900$ 

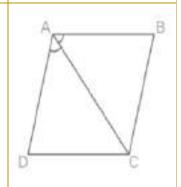

To prove: CE = BE; Proof: ABC is an isosceles triangle

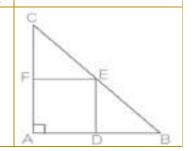

AB=AC - (1) (sides of isosceles triangle); AD = AF(2) (sides of a square)

On subtracting (1) and (2), we get AB - AD = AC - AF; BD = CF ----- (3)

In triangles CFE and BDE, ; DE = EF (side of a square) ; D = CF (proved above)

 $\angle CFE = \angle EDB = 90^{\circ}$  (angle of a square);  $\triangle CFE \cong \triangle$  BDE (By SAS rule)

CE = BE (CPCT) HENCE PROVED

In a parallelogram ABCD, AB = 10 cm and AD = 6 cm. The bisector of  $\angle A$  meets DC in E. AE and BC produced meet at F. Find the length of CF.

SOLUTION:

Construction: Extend AD to H and join HF

Solution: ABFH is a parallelogram

AB || HF and HF = AB;  $\angle$ AFH =  $\angle$ FAB -----(1) (alternate interior angles)

 $\angle HAF = \angle FAB$  ----- (2) (AF is the bisector of  $\angle A$ )

From (1) and (2),  $\angle AFH = \angle HAF$ 

HF = AH (sides opposite to equal angles are equal)

HF = AB (opp sides of parallelogram)

HF = 10 cm; Since HF = AH, AH = 10 cm; From the figure,

AH = AD + DH; 10 = 6 + DH; DH = 10 - 6; DH = 4 cm

CFHD is a parallelogram, We know that the opposite sides of a parallelogram are

parallel and equal.; So, DH = CF; Therefore, CF = 4cm

Given: P, Q, R and S are respectively the mid-points of the sides AB, BC, CD and DA of a quadrilateral ABCD in which AC = BD; To prove: PQRS is a rhombus

Proof: In triangle ADC, S and R are the midpoints of AD and DC

SR || AC, SR =  $\frac{1}{2}$  AC(1) (By midpoint theorem); In triangle ABC, P and Q are the midpoints of AB and BC; PQ || AC, PQ =  $\frac{1}{2}$  AC -----(2) (By midpoint theorem)

Comparing (1) and (2),  $SR = PQ = \frac{1}{2} AC$  ---- (3);

In triangle BCD, RQ  $\parallel$  BD, RQ =  $\frac{1}{2}$  BD ----(4)

(By midpoint theorem), In triangle BAD, ; SP || BD

 $SP = \frac{1}{2}BD$  -----(5) (By midpoint theorem)

Comparing (4) and (5),  $SP = RQ = \frac{1}{2} BD$  ----- (6)

AC = BD (given) Dividing by 2 on both sides,  $\frac{1}{2}AC = \frac{1}{2}BD$ ; From (3) and (6),

SR = PQ = SP = RQ; This implies all the sides of the quadrilateral are equal.

Therefore, PQRS is a rhombus.

# CASE STUDY QUESTIONS (4 MARKS)

In the middle of the city, there was a park ABCD in the form of a parallelogram form so that AB = CD,  $AB \parallel CD$  and AD = BC,  $AD \parallel BC$ . Municipality converted this park into a rectangular form by adding land in the form of  $\triangle APD$  and  $\triangle BCQ$ . Both the triangular shape of land were covered by planting flower plants.

Which side is equal to PD? (1)

SOLUTION: PD = BQ

Show that  $\triangle ABC$  and  $\triangle CDA$  are congruent.

**SOLUTION:** In  $\triangle$ ABC and  $\triangle$ CDA; AB = CD (Opp side of llgm)

AD = BC (Opp side of llgm); AC = AC (Common)

 $\triangle$ ABC and  $\triangle$ CDA (by SSS rule);

Show that  $\triangle APD$  and  $\triangle CQB$  are congruent.

**SOLUTION** In  $\triangle APD$  and  $\triangle CQB$ ; AP = CQ (Opp side of rectangle)

AD = BC (Opp side of llgm);  $\angle APD = \angle CQB$  (Each 900)

 $\triangle$ APD and  $\triangle$ COB (by RHS rule)

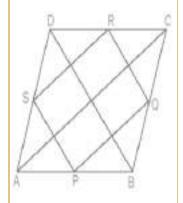

OR What is the value of  $\angle m$ ?

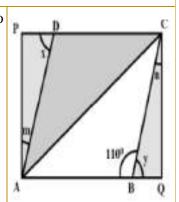

**SOLUTION:**  $\angle B = \angle D = 110^0$  (Opp angles of parallelogram)

In triangle APD;  $m+x+\angle APD=180^{\circ}$ ;  $m+(180-110)+90=180^{\circ}$ 

 $m + 160 = 180^{\circ}$ ; m = 180 - 160 m = 20

Activity-based learning- ensures active engagement of learner with concepts and instructional materials. Learning is hands-on and experiential, providing learners the opportunity of learning through manipulation of materials and objects. Teachers model the process, and students work independently to copy it. Mr. Shubham Maths teacher of class 9th wants to explain the properties of parallelograms in a creative way, so he gave students yellow colored paper in the shape of a quadrilateral and then ask the students to make a parallelogram from it by using paper folding and coloured it with green colour.

How can a parallelogram be formed by using paper folding?

SOLUTION: By joining mid points of sides of a quadrilateral one can make parallelogram. Now, S and R are mid points of sides AD and CD of  $\Delta$ ADC,

P and Q are mid points of sides AB and BC of  $\triangle$ ABC,

then by mid-point theorem  $SR \parallel AC$  and  $SR = \frac{1}{2}AC$ 

Similarly, PQ  $\parallel$  AC and PQ =  $\frac{1}{2}$ AC.; Therefore SR  $\parallel$  PQ and SR = PQ

A quadrilateral is a parallelogram if a pair of opposite sides is equal and parallel.;

Hence PQRS is parallelogram. ; If  $\angle RSP = 30^{\circ}$ , then find  $\angle RQP$ .

**SOLUTION:**  $\angle$ RQP = 30° (Opposite angles of a parallelogram are equal.)

If SP = 3 cm, Find the RQ.; Solution: RQ = 3cm (Opposite sides of a parallelogram are equal.) OR Find the value of  $\angle R$  and  $\angle S$ ; if  $\angle P : \angle Q = 1 : 4$ .

SOLUTION: Since PQRS is a parallelogram, opposite angles are equal.

 $\Rightarrow \angle P = \angle R$  and  $\angle Q = \angle S$  Also,  $\angle P : \angle Q = 1 : 4 \Rightarrow \angle P = \angle R = k$  and  $\angle Q = \angle S = 4k$ 

Now,  $\angle P + \angle Q + \angle R + \angle S = 360^{\circ}$  (Angle sum property of quadrilateral)

 $\Rightarrow k + 4k + k + 4k = 360^{\circ} \Rightarrow 10k = 360^{\circ} \Rightarrow k = 36^{\circ}$ 

Hence,  $\angle R = k = 36^{\circ}$  and  $\angle S = 4k = 144^{\circ}$ .

What is the measure of  $\angle AOB$ ?

**SOLUTION:**  $\angle$  AOB =  $90^{\circ}$  (diagonals of square bisect each other at right angle)

Which is the correct congruence rule applicable to prove  $\triangle ABC \cong \triangle BAD$ 

SOLUTION: In  $\triangle ABC \cong \triangle BAD$ 

AB = AB (common) AC = BD (diagonals are equal)

AD = BC (opp sides are equal) $\triangle ABC \cong \triangle BAD$  (By SSS rule)

If OB = 5cm, find the value of BD

**SOLUTION**: Diagonal of square bisect each other

 $BD = 2OB = 2 \times 5 = 10cm$ 

Or c) If OA = 3 cm, find the value of OC.

**SOLUTION:** Diagonal of square bisect each other OA = OC = 3cm

#### HOTS

**SOLUTION:** BK = DM (halves of equal sides)

Therefore, BM II DK, Similarly BN II DL

Also  $\triangle ABN \cong \triangle ADK$  (By SAS rule)

 $=> \angle 1 = \angle 2$ 

 $\triangle PND \cong \triangle PKB$  (By AAS rule)

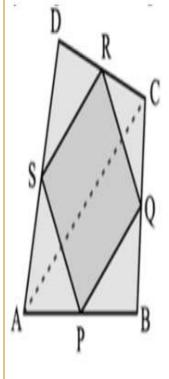

=>PB = PD, Therefore ,DQBP is a rhombus

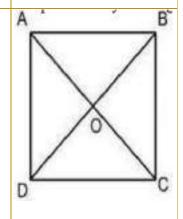

PQRS is a parallelogram. PS is produced to M so that SM= SR and MR is produced to meet PQ produced at N. Prove that QN = QR.

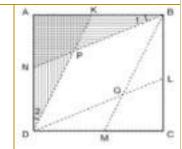

SOLUTION: In  $\Delta$ SMR, SM = SR

 $=> \angle 1 = \angle 2$  ( Angles opp to equal sides are equal

 $=> \angle 1 = \angle 3$  ( QR ll PM, corresponding angles are equal)

Similarly => $\angle 2 = \angle 4$  ( corresponding angles)

 $=> \angle 3 = \angle 4$ ,

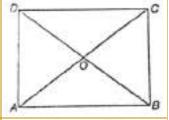

Hence, In  $\triangle$ QRN, QN = QR

In a rectangle, one diagonal is inclined to one of its sides at 25°. Measure the acute angle between the two diagonals.

**SOLUTION**: Let ABCD be a rectangle where AC and BD are the two diagonals which are intersecting at point O.

 $\angle BDC = 25^{0}(Given)$ ;  $\angle BDA = 90-25 = 65^{0}$ ;  $\angle DAC = \angle BDA$  ( $\triangle DAC \cong \triangle BDA$ )

So,  $\angle DOA =$ acute angle between the diagonals= 180- 65- 65 =  $50^{\circ}$ 

The sides AD and BC of a quadrilateral are produced as shown in the figure. Prove that  $x = \frac{(a+b)}{a}$ 

SOLUTION:  $\angle a + \angle ADC = 180^{\circ}$  (Linear pair); Similarly  $\angle b + \angle BCD = 180^{\circ}$ ;

Adding  $a + b + \angle BCD + \angle ADC = 360^{\circ} (1)$ ; But  $x + x + \angle ADC + \angle BCD = 360^{\circ} (2)$ 

From (1) and (2)  $a + b + \angle BCD + \angle ADC = x + x + \angle BCD + \angle ADC$ ;

x + x = a + b;  $x = \frac{(a+b)}{2}$ 

In the fig. ABCD is a square, diagonal BD is extended through D to E. AD=DE and AD is drawn as shown in fig. What is the measure of ∠DAE?

SOLUTION: ABCD is a square

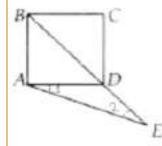

AD= DE (Given);  $\angle 1 = \angle 2$  (angles opp to equal sides are equal)

 $\angle ABD = \angle BDA = \frac{90}{2}$  (Diagonal of a square bisect an angle)

 $\angle ADB + \angle ADE = 180^{\circ}$  (Linear Pair) :  $45 + \angle ADE = 180^{\circ} \angle ADE = 180^{\circ} - 45 = 135^{\circ}$ 

In triangle ADE $\angle 1 + \angle 2 + \angle ADE = 180^{\circ}$ ;  $2\angle DAE + 135 = 180^{\circ}$ 

 $\angle DAE = (180^{\circ} - 135)/2 = 22.5$ 

### EXERCISE

### MULTIPLE CHOICE QUESTIONS (1 MARKS)

- Diagonals of a parallelogram ABCD intersect at O. If  $\angle BOC = 90^{\circ}$  and  $\angle BDC = 50^{\circ}$ , then  $\angle OAB$  is (A)  $90^{\circ}$  (B)  $50^{\circ}$  (C)  $40^{\circ}$  (D)  $10^{\circ}$
- If angles A, B, C and D of the quadrilateral ABCD, taken in order, are in the ratio 3:7:6:4, then ABCD is a (A) rhombus (B) parallelogram (C) trapezium (D) kite
- If bisectors of  $\angle A$  and  $\angle B$  of a quadrilateral ABCD intersect each other at P, of  $\angle B$  and  $\angle C$  at Q, of  $\angle C$  and  $\angle D$  at R and of  $\angle D$  and  $\angle A$  at S, then PQRS is a
  - (A) rectangle (B) rhombus
  - (C) parallelogram (D) quadrilateral whose opposite angles are supplementary
- 4 If APB and CQD are two parallel lines, then the bisectors of the angles APQ, BPQ, CQP and PQD form (A) a square (B) a rhombus (C) a rectangle (D) any other parallelogram
- D and E are the mid-points of the sides AB and AC of ΔABC and O is any point on side BC. O is joined to A. If P and Q are the mid-points of OB and OC respectively, then DEQP is
  - (A) a square (B)a rectangle (C) a rhombus (D) a parallelogram

#### ASSERTION (A): AND REASONING

In the following questions, a statement of Assertion (A):(A) is followed by a statement of Reason (R). Choose the correct answer out of the following choices.

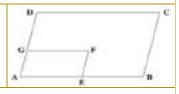

- (a) Both A and R are true and R is the correct explanation of A.
- (b) Both A and R are true but R is not the correct explanation of A.
- (c) A is true but R is false.
- (d) A is false but R is true.
- Assertion: ABCD is a parallelogram in which P,Q,R and S are the midpoint of AB,BC,CD and DA respectively then PQRS is a parallelogram

Reason: The line joining the midpoint of two sides of the triangle parallel to the third side and half of it.

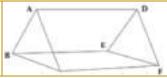

- Assertion: In a rhombus ABCD the diagonal AC bisects  $\angle A$  as well as  $\angle C$  Reason: The diagonal of rhombus bisects each other at right angle.
- Assertion: Every parallelogram is a rectangle.
- Reason: The angle bisector of parallelogram forms a rectangle
- Assertion: The diagonal of parallelogram bisects each other Reason: If the diagonal of a parallelogram are equal and bisect each other at right angle then the parallelogram is a square.
- Assertion: the angles of a quadrilateral are 110°, 80°, 70° and 95° Reason: The sum of angle of a quadrilateral is 360°.

# **VERY SHORT ANSWER QUESTIONS (2 MARKS)**

ABCD and AEFG are two parallelograms. If  $\angle C = 55^{\circ}$ , determine  $\angle F$ 

- Diagonals of a quadrilateral ABCD bisect each other. If  $\angle A = 35^{\circ}$ , determine  $\angle B$ .
- In  $\triangle$ ABC, AB = 5 cm, BC = 8 cm and CA = 7 cm. If D and E are respectively the mid-points of AB and BC, determine the length of DE.
- One angle of a quadrilateral is of 108° and the remaining three angles are equal. Find each of the three equal angles

ABCD is a trapezium in which AB || DC and  $\angle A = \angle B = 45^{\circ}$ . Find angles C and D of the trapezium.

### SHORT ANSWER QUESTIONS (3 MARKS)

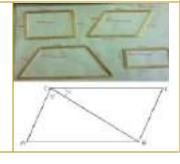

- Prove that the line joining the mid-points of the diagonals of a trapezium is parallel to the parallel sides of the trapezium.
- 2 ABCD is a rectangle in which diagonal BD bisects ∠B. Show that ABCD is a square.
- E and F are respectively the mid-points of the non-parallel sides AD and BC of a trapezium ABCD. Prove that EF  $\parallel$  AB and EF =  $\frac{1}{2}$  (AB + CD).
- 4 ABCD is a rhombus in which altitude from D to side AB bisects AB. Find the angles of the rhombus.
- The angle between two altitudes of a parallelogram through the vertex of an obtuse angle of the parallelogram is 60°. Find the angles of the parallelogram

# LONG ANSWER QUESTIONS (5 MARKS)

- A diagonal of a parallelogram bisects one of its angles. Show that it is a rhombus.
- P and Q are the mid-points of the opposite sides AB and CD of a parallelogram ABCD. AQ intersects DP at S and BQ intersects CP at R. Show that PRQS is a parallelogram
- ABCD is a quadrilateral in which AB || DC and AD = BC. Prove that  $\angle A = \angle B$  and  $\angle C = \angle D$ .
- In Fig, AB  $\parallel$  DE, AB = DE, AC  $\parallel$  DF and AC = DF. Prove that BC  $\parallel$  EF and BC = EF.
- E is the mid-point of a median AD of ΔABC and BE is produced to meet AC at F. Show that AF =  $\frac{1}{3}$  AC.

# CASE STUDY QUESTIONS (4 MARKS)

- During Maths lab activity, each students were given with four broomsticks of length 8cm, 8cm, 5cm and 5cm to make different types of quadrilateral.
  - Using above information, answer the following questions
  - a) How many quadrilaterals can be formed using these sticks? (1)
  - b) Name the quadrilaterals formed using these sticks. (1)
  - c) One of the students made a parallelogram using the sticks as shown in the figure. What is the relation between x and y if BC< CD (2)

OR

- d) If P Q R and S are respectively midpoints of sides AB, BC, CD, and DA of quadrilateral ABCD in which AC=BD and AC\pm BD, PQRS is a \_\_\_\_\_\_. (2)
- There is a Diwali Celebration in ABC School, New Delhi. Students are asked to prepare a rangoli in the form of a triangle. They made a rangoli in the form of triangle ABC with dimensions of triangle ABC are 26cm, 28cm and 25cm

- b) In fig R and Q are midpoint of side AB and AC respectively. What is the length of RQ?
- c) If garland is to be placed along the side of the triangle QPR which is formed by joining the midpoint, what is the length of the garland?
   OR
- d) In the above figure, R, P and Q are the midpoint of side AB, BC and AC respectively. What is the area of triangle PQR?

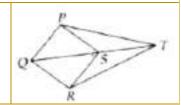

These 4 poles are connected to each other through wire and they form a quadrilateral. Light from pole B focus light on mid-point G of wire between pole C and B, from pole C focus light on mid-point F of wire between pole C and pole D. Similarly pole D and pole A focus light on the mid-point E and H respectively.

On the basis of the above information, solve the following questions:

- a) If BD is the bisector of  $\angle B$  then prove that I is the mid-point of AC.
- b) Is it true that every parallelogram is a rectangle?
- c) Prove that quadrilateral EFGH is a parallelogram.
- d) OR
- e) If the distance between pole B and pole D is 50m then what is the length of GF?

#### **HOTS**

- If the bisectors of angles of a quadrilateral enclose a rectangle, then show that it is a parallelogram.
- In a  $\triangle$ ABC, DE is parallel to BC and D is the mid-point of side AB. Find the perimeter of  $\triangle$ ABC when AE = 4.5 cm, DE = 5 cm and DB = 3.5 cm
- If an angle of a parallelogram is 4/5 of it adjacent angle, then find the measures of all the angles of the parallelogram.
- The lengths of diagonals of a rhombus are 24 cm and 18 cm respectively. Find the length of each side of the rhombus.
- In figure PQ = QR = RS = SP = SQ = 6cm and PT = RT = 14cm. Find the length of ST

#### **ANSWERS**

MCQs: 1. C 2.C 3.D 4.C 5.D

ASSERTION (A):AND REASONING (1 MARKS): 1.A 2.B 3.D 4.D 5.D

**VERY SHORT ANSWER** (2 MARKS): 1. 55<sup>0</sup> 2. 145<sup>0</sup> 3. 3.5cm 4 . 24<sup>0</sup> 5. Both angles are equal 135<sup>0</sup>

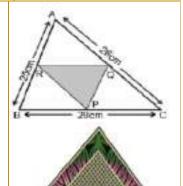

#### CASE STUDY QUESTIONS:

A) Three types of quadrilateral can be formed

Parallelogram, Rectangle and Kite

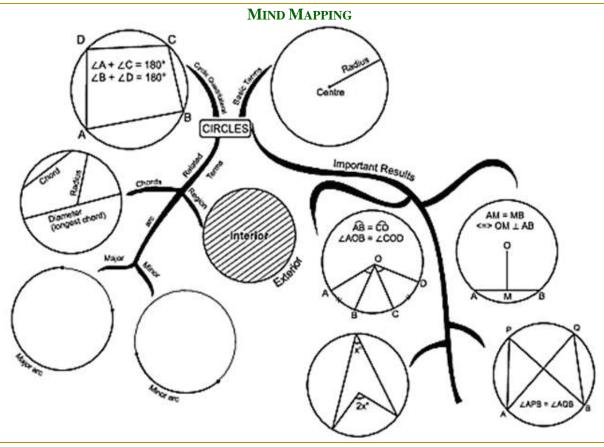

x<y OR C) Square

A) QC B) 14cm C) 39.5cm OR C) ¼ ar(ABC) OR C) 25m

### CHAPTER - 09 CIRCLES

#### GIST/SUMMARY OF THE LESSON

- The collection of all points lying inside and on the circle C(O,r) is called a circular disc with the centre O and radius r.
- Circles having the same centre and different radii are said to be concentric circles.
- A continuous piece of a circle is called an arc of the circle.
- The length of an arc is the length of the fine thread which just covers it completely.
- Let's C(O,r) be any circle. Then any angle whose vertex is O is called the centre angle.
- A minor arc of a circle is the collection of those points of the circle that lie on and also inside arc Central angle.
- A major arc of a circle is the set of points of the circle that lie on or outside a central angle.
- A line segment joining any two points on a circle is called a chord of the circle.
- A chord passing through the centre of a circle is known as its diameter.
- A diameter of a circle divides it into two equal parts which are arcs. Each of these two arcs is called a semicircle.
- Two circles are said to be congruent, if either of them can be superposed on the other so as to cover it exactly.
- If two arcs of a circle are congruent then corresponding chords are equal.
- If two chords of a circle are equal, then their corresponding arcs are congruent.
- The perpendicular from the centre of a circle to a chord bisect the chord.
- The line segment joining the centre of a circle to the midpoint of a chord is perpendicular to the chord.
- There is one and only circle passing through three non-collinear points.
- If two circles intersect in two points, then the line through the centre is perpendicular to the common chord.
- Equal chords of a circle are equidistant from the centre.
- Chords of a circle which are equidistant from the centre are equal.
- Equal chords of a circle subtend equal angle at the centre.
- If the angles subtended by two chords of a circle at the centre are equal, the chords are equal.
- Of any two chords of a circle, the larger chord is nearer to the centre.
- Of any two chords of a circle the chord nearer to the centre is larger.

- The angle subtended by an arc of a circle at the centre is doubled angle subtended by it at any point on the remaining part of the circle.
- Angles in the same segment of a circle are equal.
- The angle in a semicircle is a right angle.
- If all vertices of a quadrilateral lie and a circle, it is called a cyclic quadrilateral.
- The opposite angles of a cyclic quadrilateral are supplementary.
- If the sum of any pair of opposite angles of a quadrilateral is 180°, then it is cyclic.
- The quadrilateral formed by angle bisectors of a cyclic quadrilateral is also cyclic.
- If two sides affect cyclic quadrilateral are parallel then the remaining two sides are equal and the diagonals are also equal.

	also equal.		
	If two opposite sides of a cyclic quadrilateral are equal, then the other two sides are parallel.		
	■ An isosceles trapezium is cyclic.		
	Altitudes of a triangle are concurrent.		
	MULTIPLE CHOICE QUESTIONS (1 MARK QUESTIONS)		
1	If in a circle with centre O, AB and CD are two diameters perpendicular to each other, Then the relation between the lengths of chords AC and BD is  (A)AC < BD (B) AC > BD (C) AC = $\frac{1}{2}$ BD (D) AC = BD	Ans: D	
2	Choose the one which is incorrect.  (A) The length of the perpendicular from a point to a line is the distance of the line from the point.  (B) If the point lies on the line, the distance of the line from the point is Zero.  (C) The longer chord is nearer to the centre than the smaller chord.  (D) The length of any diameter of a circle from the centre of the circle is equal to itself.	Ans:D	
3	The sum of both pair of opposite angles of a quadrilateral is		
4	InbelowFig,ABCDisacyclicquadrilateralinwhichACandBDareitsdiagonals.  If∠DBC= 60° and ∠BAC = 30°, find ∠BCD.  (A) 80°(B)90° (C) 60°(D)none of these	Ans: B	
5	Segment of a circle is the region between an arc and of the circle.  (A)diameter (B)semicircle(C)chord (D)sector	Ans: C	
6	The line drawn through the centre of a circle to a chord is perpendicular to the chord.  (A)trisect (B)bisect (C)coincide (D) none of these.	Ans: B	
7	Thelengthofachordofcircleofradius10cmis12cm.Determinethedistanceofthechord from the centre  (A)7 cm (B) 8 cm (C)6 cm (D)5cm	Ans: B	
8	If AB is a chord of a circle, P and Q are the two points on the circle different from A and B, then $\angle APB - \angle AQB = 90^{\circ}$ (B) $\angle APB + \angle AQB = 180^{\circ}$ (C) $\angle APB - \angle AQB = 0^{\circ}$ (D) $\angle APB + \angle AQB = 100^{\circ}$	Ans: C	
9	In the above sided Fig.,A,B,C and their four points onacircle.AC and BD intersect at a point E such that $\angle$ BEC = 130° and $\angle$ ECD = 20°. Find $\angle$ BAC.  (A)150° (B)110° (C) 90°(D)1000  ANS:B		

10	In the given figure, O is the centre of the circle. The value of x is  (A) 300° (B) 70° (C) 10° (D) 210°  ANS:A	A X B
	ASSERTION – REASONING BASED QUESTIONS  A) both Assertion and reason are correct and reason is correct explanation for Assertion  B) both Assertion and reason are correct but reason is not correct explanation for Assertion  C) Assertion is correct but reason is false  D) both Assertion and reason are false	
1	Assertion(A): There can be infinite numbers of equal chords of a circle.  Reason(R): A circle has only finite number of equal chords.	Ans:C
2	Assertion(A): A circle has only one centre.  Reason(R): A circle is defined as the path traced by a moving point that always remains at a fixed distance from a given fixed point	Ans:A
3	Assertion(A): With a given centre and a given radius, only one circle can be drawn.  Reason(R): Because circles have only one parameter	Ans:A
4	Assertion(A): Two diameters of a circle will necessarily intersect.  Reason(R): diameters will always intersect each other at the centre of the circle.	Ans:A
5	Assertion(A): A circle of radius 3cm can be drawn through two points A,B such that AB=6 cm.  Reason(R): Diameter of circle =2x radius of circle	Ans:A
6	Assertion(A): If the sum of the circumferences of two circles with radii R1 and R2 is equal to the circumference of a circle of radius R, then R1+R2=R Reason(R): circumference of circle with radius =2ΠR	Ans:A
7	Assertion(A): There is only one tangent at a point of the circle.  Reason(R): The tangents drawn at the extremities of the diameter of a circle are parallel	Ans:B
8	Assertion(A): The angle subtended by the diameter of a semi-circle is180° Reason: The semicircle is half of the circle; hence the diameter of the semicircle will be a straight-line subtending 180 degrees	Ans:A
9	Assertion(A): Angles in the same segment are equal.  Reason(R): angle in a semi-circle is a Right angle.	Ans:C
10	Assertion(A): A semi-circle is one fourth part of the circle Reason(R): A semi-circle is obtained when a circle is divided into two unequal parts.	Ans:D
	VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)	
1	In the given figure, $\angle ACB=400$ . Find $\angle OAB$ .  Ans. Ans: Given, $\angle ACB=40^\circ$ We have to find $\angle OAB$ We know that in a circle the angle subtended by an arc at the centre is twice the angle subtended by it at the remaining part of the circle. $\angle AOB=2\angle ACB$ $\angle AOB=2(40^\circ)$ $\angle AOB=80^\circ$ (1)	

	Considering triangle AOB, $OA = OB = radius$ of the circle We know that the angles opposite	
	to the equal sides are equal.	
	$\angle OBA = \angle OAB - (2)$	
	By angle sum property of the triangle, $\angle AOB + \angle OBA + \angle OAB = 180^{\circ}$	
	From (1) and (2), $80^{\circ} + \angle OAB + \angle OAB = 180^{\circ} \ 2\angle OAB = 180^{\circ} - 80^{\circ}$	
	$2\angle OAB = 100^{\circ}$ $\angle OAB = 100^{\circ}/2$ Therefore, $\angle OAB = 50^{\circ}$	
2	Prove that "Equal chords of a circle subtend equal angles at the centre".	
	Given: A circle with centre O. AB and CD are equal chords of circle i.e. AB = CD	*
	To Prove : $\angle AOB = \angle DOC$	(/ % /)
	Proof: In $\triangle AOB \& \triangle DOC AO = OD AB = CD OB = OC$	
	$\therefore \triangle AOB \cong \triangle DOC \therefore \angle AOB = \angle DOC Hence, Proved.$	A A
3	Find the value of 'x' in the given figure.	A
	Ans: $\angle AOB = 110^{\circ}$ , $x = 110/2$ , $x = 55^{\circ}$	A
		/ 110'
		C O B
4	A chord of a circle is equal to the radius of the circle. Find the subtended by the chord at any	%
	point on minor arc and also at any point on major arc.	
	ANS: Here, the chord AB is equal to the radius of the circle. In the above diagram, OA and OB	1 6 1
	are the two radii of the circle.	11/01/
	Now, consider the $\triangle OAB$ . Here,	A B
	AB = OA = OB = radius of the circle	h
	So, it can be said that $\triangle OAB$ has all equal sides, and thus, it is an equilateral triangle.	
	$\therefore \angle AOC = 60^{\circ}$	
	And, $\angle ACB = \frac{1}{2} \angle AOB$ So, $\angle ACB = \frac{1}{2} \times 60^{\circ} = 30^{\circ}$	
	Now, since ACBD is a cyclic quadrilateral,	
	∠ADB +∠ACB = $180^{\circ}$ (They are the opposite angles of a cyclic quadrilateral)	
	So, $\angle ADB = 180^{\circ} - 30^{\circ} = 150^{\circ}$	
	So, the angle subtended by the chord at a point on the minor arc and also at a point on the	
_	major arc is 150° and 30°, respectively.	
5	In the given figure, AB and CD are parallel chords and the length of AC arc is 14cm. What is	B
	the length of BD arc?	
	ANS: Perpendicular distance between two parallel chord is same at any point, so	
	AC=BD=14CM	$C \longrightarrow D$
6	In figure,O is centre of circle. If, $\angle ABD = 35^{\circ}$ and $\angle BAC = 70^{\circ}$ , Find $\angle ACB$ .	
	ANS: We know that BD is the diameter of the circle.	//
	Angle in a semicircle is a right angle $\angle BAD = 90^{\circ}$	N 11
	Consider $\triangle$ BAD Using the angle sum property $\angle$ ADB + $\angle$ BAD + $\angle$ ABD = 180°	11/2/1
	By substituting the values $\angle ADB + 900^{\circ} + 35^{\circ} = 180^{\circ}$	W
	On further calculation $\angle ADB = 180^{\circ} - 90^{\circ} - 35^{\circ}$	.\
	By subtraction $\angle ADB = 180^{\circ} - 125^{\circ}$ So we get $\angle ADB = 55^{\circ}$	
	We know that the angles in the same segment of a circle are equal $\angle ACB = \angle ADB = 55^{\circ}$	
	So we get $\angle ACB = 55^{\circ}$ Therefore, $\angle ACB = 55^{\circ}$ .	
7	AB and CB are two chords of circle. Prove that BO bisects ∠ABC.	
	<b>SOLUTION</b> : Given: In the figure, AB = CB and O is the centre of the circle.	
	To Prove: BO bisects ∠ABC.	
	Construction: Join OA and OC.	

Proof: In  $\triangle OAB$  and  $\triangle OCB$ , OA = OC [Radii of the same circle] AB = CB [Given] OB = OB [Common]

- ∴  $\triangle$ OAB  $\cong$   $\triangle$ OCB [By SSS]
- $\therefore \angle ABO = \angle CBO [By CPCT] \Rightarrow BO bisects \angle ABC.$

8 Prove that ADE is an isosceles triangle if AB=AC with OD  $\perp$  AB and OE  $\perp$  AC

**SOLUTION**: Given that AB and AC is two equal chords of the circle with centre O

 $OD \perp AB$  and  $OE \perp AC$ 

OD =OE (Equal chords are equidistant)

 $\angle ODE = \angle OED....(i)$ 

 $\angle ODA = \angle OEA....(ii)$ 

Subtracting (i) from (ii)  $\angle ODA - \angle ODE = \angle OEA - \angle OED$ 

 $\angle ADE = \angle AED$ 

AD = AE

 $\Delta$  ADE is an isosceles triangle.

## SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)

If BC is a diameter of a circle of centre O and OD is perpendicular to the chord AB of a circle, show that CA = 2OD.

**SOLUTION:** Since OD  $\perp$  AB

 $\therefore$  D is the mid-point of AB (perpendicular drawn from the centre to a chord bisects the chord) O is centre  $\Rightarrow$  O is the mid-point of BC.

In  $\triangle$ ABC, O and D are the mid-points of BC and AB, respectively.

$$\therefore$$
 OD || AC and OD =  $\frac{1}{2}$  AC \_ (mid-point theorem)

**SOLUTION:** Let AB be a chord of circle having centre O.

 $OL \perp AB$  and OA is the radius

of the circle. So, OA = 5 cm

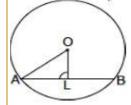

In  $\triangle OAL$ , Applying Pythagoras

theorem, we have  $OA^2 = AL^2 + OL^2$ 

$$\Rightarrow$$
  $(5)^2 = AL^2 + (3)^2 \Rightarrow 25 = AL^2 + 9 \Rightarrow AL^2 = 25 - 9 = 16 \Rightarrow AL = \sqrt{16} \text{ cm} = 4 \text{ cm}$ 

As we know that perpendicular drawn from the centre to the chord

bisects the chord.  $\therefore$  AB = 2 (AL) = 2 (4) = 8 cm

3. In the given figure, AB is diameter of the circle with centre O and CD  $\parallel$  AB. If  $\angle$ DAB = 25°, then find the measure of  $\angle$ CAD.

**SOLUTION:**  $\angle ADB = 90^{\circ}$  [Angle in a semicircle]

 $\angle BAD = \angle ADC = 25^{\circ}$  [Alternate

interior angles]  $\therefore$   $\angle BDC = 90^{\circ} + 25^{\circ} = 115^{\circ}$ 

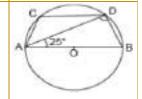

Now,  $\angle BDC + \angle BAC = 180^{\circ}$  [opp.  $\angle s$  of cyclic

quadrilateral]  $\Rightarrow 115^{\circ} + \angle BAC = 180^{\circ}$ 

 $\Rightarrow \angle BAC = 180^{\circ} - 115^{\circ} = 65^{\circ}$ 

Now,  $\angle BAC = \angle BAD + \angle CAD$ 

 $\Rightarrow$  65° = 25° +  $\angle$ CAD

- $\therefore$   $\angle CAD = 65^{\circ} 25^{\circ} = 40^{\circ}$
- Distance of a chord AB of a circle from the centre is 12 cm and length of the chord AB is 10 cm. Find the diameter of the circle.

Distance of chord AB from centre is OD : OD = 12 cm

OA = radius of circle In  $\triangle$ AOD, OD  $\perp$  AB

As we know perpendicular drawn from the centre to the chord

bisects the chord. 
$$\therefore$$
 AD =  $\frac{1}{2}$  AB =  $\frac{1}{2} \times 10 = 5$  cm

Now, in  $\triangle AOD$ 

$$OA^2 = AD^2 + OD^2$$
 (Applying Pythagoras theorem)  $\Rightarrow OA^2 = (5)^2 + (12)^2 = 25 + 144$ 

$$\Longrightarrow$$
  $OA^2 = 169$ 

$$OA = 13$$

$$\Rightarrow$$
 diameter = 2 (OA) = 2 × 13 cm = 26 cm

In the given figure, diameter AB of circle with centre O bisects the chord PQ. If PR = QR = 8cm and RB = 4 cm, find the radius of the circle.

Also, 
$$PR = RQ = 8 \text{ cm}$$

OB, OP and OO are radii

of the circle. 
$$\Rightarrow$$
 OB = OQ

$$= OP = r (say)$$

Consider OR = x cm

$$OB = OR + BR = (x + 4) \text{ cm}$$

$$\Rightarrow x = (OB - 4) = (r - 4) \text{ cm}$$

As R is the mid point of PQ.

Also, RO is a line segment passing through centre O.

(line segment joining mid pt. of chord to the centre of circle is  $\therefore$  OR  $\perp$  PO perpendicular to the chord)

In right-angled  $\triangle OQR$ 

$$OQ^2 = OR^2 + QR^2$$
 (by Pythagoras theorem)

$$=x^2+(8)^2$$

$$\Rightarrow$$
 OQ<sup>2</sup> =  $x^2 + 64$ 

$$r^2 = (r-4)^2 + 64$$
 [Put  $x = (r-4)$ ]

$$\Rightarrow r^2 = r^2 + 16$$

$$-8 r + 64 \Rightarrow$$

$$8r = 80$$

$$\Rightarrow r = 10 \text{ cm}$$

Prove that the line drawn through the centre of a circle to the mid-point of a chord is perpendicular to the chord.

**SOLUTION:** Ans:

In circle, O is the centre and OP bisects the chord AB.

Join OA and OB (radius of circle)

In  $\triangle APO$  and  $\triangle BPO$ 

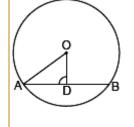

$$OA = OB$$

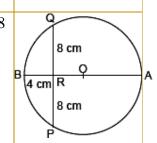

$$OP = OP$$

$$AP = BP$$

$$\triangle APO \cong \triangle BPO$$

Also 
$$\angle OPA + \angle OPB = 180^{\circ}$$
  
 $\Rightarrow \angle OPA + \angle OPA = 180^{\circ}$ 

$$2\angle OPA = 180^{\circ}$$

$$\Rightarrow$$
  $\triangle OPA = 90^{\circ} \Rightarrow OP \perp AB$ .

Prove that the sum of both pair of the opposite angles of a cyclic quadrilateral is 180°.

To prove:  $\angle P + \angle R = 180^{\circ}$ 

Construction: Join O, P and O, R.

Proof: By Central angle theorem

$$\Rightarrow \angle PSR = \frac{1}{2} \angle POR \qquad ...(1)$$

and Reflex 
$$\angle POR = 2 \angle PQR$$

$$\Rightarrow \angle PQR = \frac{1}{2} \text{ Reflex } \angle POR \quad ...(2)$$

Adding Equation (1) and (2)

$$\angle PSR + \angle PQR = \frac{1}{2} \angle POR + \frac{1}{2} Reflex \angle POR$$

$$= \frac{1}{2} [\angle POR + Reflex \angle POR]$$
$$= \frac{1}{2} \times 360^{\circ} = 180^{\circ}$$

Similarly, ∠P + ∠R = 180°

**Ans**: 
$$2x + 3x = 180^{\circ}$$
,  $5x = 180^{\circ}$ ,  $x = 36^{\circ}$ 

$$\angle AOB = 60^{\circ}$$

(Given)

$$OA = OB$$

(Equal radii)

$$\angle OAB = \angle OBA(Angles opposite to equal sides OA and OB) ...(i)$$

In 
$$\triangle AOB \angle OAB + \angle AOB + \angle OBA = 180^{\circ}$$
 (Angle sum property of triangle)

$$60^{\circ} + \angle OAB + \angle OAB = 180^{\circ}$$
 (:  $\angle OAB = \angle OBA$ , using (i))

$$\Rightarrow 2/OAB = 180^{\circ} - 60^{\circ}$$

$$\Rightarrow$$
  $\angle OAB = 60^{\circ} \Rightarrow \angle OBA = 60^{\circ}$ 

 $\therefore$   $\triangle$ AOB is an equilateral

triangle Hence OA = OB = AB

$$\Rightarrow$$
 AB = 5 cm

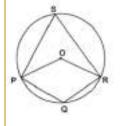

(as OA = 5 cm)

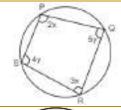

### LONG ANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

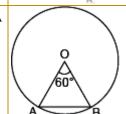

Prove that the quadrilateral formed (if possible) by the internal angle bisectors of any quadrilateral is cyclic.

#### **SOLUTION:**

Given: ABCD is a quadrilateral, AH, BF, CF and DH are the angle bisectors of internal angles A, B, C and D.

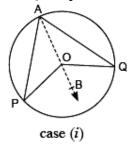

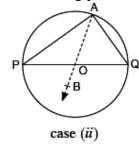

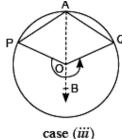

These bisectors form a quadrilateral EFGH. To Prove: EFGH is cyclic Proof: In AEB.  $\angle EAB + \angle ABE + \angle AEB = 180^{\circ}$ (Sum of  $AEB = 180^{\circ}$ angles of  $\triangle ABC$ )  $\Rightarrow$  $(\angle EAB + \angle ABE)$ ...(i) Also  $\angle AEB = \angle FEH$ ...(ii) (Vertically opposite angles) By equating (i) and (ii)  $\angle FEH = 180^{\circ} - (\angle EAB + \angle ABE)$ ...(iii) Similarly, in  $\triangle GDC \angle FGH = 180^{\circ} - (\angle GDC + \angle GCD)...(iv)$ Adding (iii) and (iv)  $\angle FEH + \angle FGH = 360^{\circ} - (\angle EAB + \angle ABE + \angle GDC + \angle GCD)$  $\frac{1}{2}$  ( $\angle$ BAD +  $\angle$ ABC +  $\angle$ ADC +  $\angle$ BCD)  $= 360^{\circ} -$ (As AH, BF, CF and HD are bisectors of  $\angle A$ ,  $\angle B$ ,  $\angle C$ ,  $\angle D$ ) (Sum of angles of quadrilateral, ABCD)  $\angle FEH + \angle FGH = 360^{\circ} - 180^{\circ} = 180^{\circ}$ ⇒ FEHG is a cyclic quadrilateral. (If the sum of opposite angles of quadrilateral is 180° then it is cyclic)

2 Prove that the angle subtended by an arc at the centre is double the angle subtended by it at any point on the remaining part of the circle.

**SOLUTION**: Given : Given an arc PQ of a circle subtending angles POQ at the centre O and PAQ at a point A on the remaining part of the circle.

To Prove: POQ = 2 PAQ

Construction: Join AO and extends it to B.

Proof: Consider three cases case (i): When arc PQ is a minor arc. case (ii): When arc PQ is a semicircle. case (iii): When arc PQ is a major arc. In all the

three cases

Taking  $\triangle AOQ$ 

 $\angle BOQ = \angle OAQ + \angle OQA$  (Exterior angle of  $\Delta$  is equal to the sum of interior

opposite angles) Also OA = OQ (radii of circle)

 $\Rightarrow OAQ = \angle OQA$  (Angles opposite to equal sides)  $\Rightarrow \angle OAQ + \angle OAQ$  (Angles opposite to equal angles)

 $\Rightarrow$  BOQ = 2 $\angle$ OAQ ...(i)

Similarly  $\angle BOP = 2\angle OAP$  ...(ii) Adding (i) and (ii) we have

# $\angle BOQ + \angle BOP = 2\angle OAQ + 2\angle OAP = 2(\angle OAQ + \angle OAP) \Rightarrow POQ = 2\angle PAQ$

Specially for case (iii) we can write reflex  $\angle POQ = 2\angle PAQ$ 

Two circles intersect a ttwo points B and C. Through B, two line-segments ABD and PBQ are drawn to intersect the circles at A, D and P, Q respectively. Prove that  $\angle ACP = \angle QCD$ .

**SOLUTION: Ans:** 

Join AP and DQ

∠ACP and ∠ABP lie in the same segment.

Similarly, ∠DCQ and ∠DBQ lie in the same segment.

We know that angles in the same segment of a circle are equal.

So, we get  $\angle ACP = \angle ABP$  and  $\angle QCD = \angle QBD$ 

Also,  $\angle QBD = \angle ABP$  (Vertically opposite angles)

Therefore,  $\angle ACP = \angle QCD$ .

A circular park of radius 20m is situated in a colony. Three boys Ankur, Syed and David are sitting at equal distance on its boundary each having a toy telephone in his hands to talk each other. Find the length of the string of each phone.

**SOLUTION**: Here, the positions of Ankur, Syed and David are represented as A, B and C, respectively. Since they are sitting at equal distances, the triangle ABC will form an equilateral triangle.

AD  $\perp$  BC is drawn. Now, AD is the median of  $\triangle$ ABC, and it passes through the centre O.

Also, O is the centroid of the  $\triangle$ ABC. OA is the radius of the triangle.

OA = 2/3 AD

Let the side of a triangle a metres, then BD = a/2 m.

Applying Pythagoras' theorem in  $\triangle ABD$ ,

 $AB^2 = BD^2 + AD^2$ 

 $\Rightarrow AD^2 = AB^2 - BD^2$ 

 $\Rightarrow$  AD<sup>2</sup> = a<sup>2</sup> -(a/2)<sup>2</sup>

 $\Rightarrow$  AD<sup>2</sup> = 3a<sup>2</sup>/4

 $\Rightarrow$  AD =  $\sqrt{3}a/2$ 

OA = 2/3 AD

 $20 \text{ m} = 2/3 \times \sqrt{3} \text{ a}/2$ 

 $a = 20\sqrt{3} \text{ m}$ 

So, the length of the string of the toy is  $20\sqrt{3}$  m.

5 Let vertex of an ∠ ABC be located outside a circle and let the sides of The angle intersect chords AD and CE. Prove that ∠ABC is equal to half the difference of the angles subtended by the chords AC and DE at the centre.

#### **SOLUTION:**

Vertex B of ∠ABC is located outside the circle with centre O.

Side AB intersects chord CE at point E and side BC intersects chord AD at point D.

We have to prove that  $\angle ABC = [\angle AOC - \angle DOE]$ 

Join OA, OC, OE and OD.

Now ∠AOC=2∠AEC [Angle subtended by an arc at the centre of the circle is twice the angle subtended by the same arc at any point in the alternate segment of the circle]

∠AOC=∠AEC....(i)

Similarly  $\angle DOE = \angle DCE.....ii$ )

Subtracting eq. (ii) from eq. (i), ½ (∠AOC-∠DOE)= ∠AEC-∠DCE .....(iii)

Now ∠AEC=∠ADC (Angles in same segment in circle) .....(iv)

Also ∠DCE=∠DAE

Using eq. (iv) and (v) in eq.(iii),  $1/2[\angle AOC-\angle DOE] = (\angle DAE+\angle ABD)-\angle DAE$ 

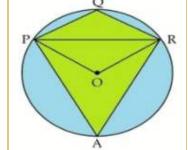

(exterior property)

 $[\angle AOC - \angle DOE] = \angle ABD$ 

### Or $[\angle AOC - \angle DOE] = \angle ABC$ Hence proved.

### CASE BASED QUESTIONS (4 MARKS QUESTIONS)

Four Friends Rima, Mohan, Sohan and Sita are sitting on the circumference of a circular park full of water. Their locations are marked by points A, P, Q and R such that the APQR is a quadrilateral with greenery. Rohit joins them and sits at the centre of the circular park, so he is equidistant from all the other friends. His position is marked as O. They are sitting in such a way that  $\angle PQR = 110^{\circ}$ .

- a) What is measure of reflex  $\angle POR$ ?(1)
- b) What is the measure of  $\angle PAR$ ?(2)
- c) What is measure of  $\angle POR?(1)$

**SOLUTION:** Ans: (i) Reflex  $\angle POR = 2\angle PQR$  (: Angle subtended by an arc at the centre is double the angle subtended by it in the remaining part of the circle.)

- ∴ Reflex  $\angle POR = 2 \times 110^{\circ} = 220^{\circ}$
- (ii)  $\angle PAR + \angle PQR = 180^{\circ}$  (: Sum of opposite angles of cyclic quadrilateral is  $180^{\circ}$ )  $\therefore \angle PAR = 180^{\circ} - 110^{\circ} = 70^{\circ}$
- (iii)  $\angle POR = 2\angle PAR$  (: Angle subtended by an arc at the centre is double the angle subtended by it in the remaining part of the circle.)  $\therefore \angle POR = 2 \times 70^{\circ} = 140^{\circ}$
- One triangular shaped pond is there in a park marked by ABC. Three friends are sitting positions at A, B and C. They are studying in Class IX in an International. A, B and C are equidistant from each other as shown in figure given below.

- (ii). What will be the value of ∠BOC?
- (iii). Which angle will be equal to ∠OBC?

Ans: (i) AB = BC = AC as per the given statement

 $\therefore$  ∠BAC = 60° (Angles of a equilateral triangle)

⇒  $\angle$ OBC +  $\angle$ OCB +  $\angle$ BOC = 180° (Angle sum property of triangle) ⇒  $\angle$ OBC +  $\angle$ OBC + 120° = 180° ⇒ 2 $\angle$ OBC = 60° ⇒  $\angle$ OBC = 30°

A farmer has a circular garden as shown in the picture above. He has a different type of tree, plants and flower plants in his garden. In the garden, there are two mango trees A and B at a distance of AB=10m. Similarly has two Ashok trees at the same distance of 10m as shown at C and D AB subtends ∠AOB=120° at the centre O, the perpendicular distance of AC from centre is 5m the radius of the circle is 13m.

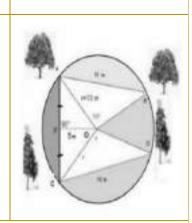

- b) What is the distance between mango tree A and Ashok tree C?
- c) What is the value of angle ∠OAB?
- d) What is the value of angle ∠OCD?

ANSWERS : 1 (ii) 120°

2.(ii) 24m

3(iii) 30

4 (i) 30°

#### **EXERCISE**

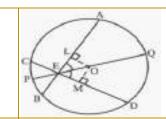

#### MULTIPLE CHOICE QUESTIONS

AD is a diameter of a circle and AB is a chord of it. If AD = 34 cm and AB = 30 cm. Then distance

	of AB from centre of the circle is
	(A) 17cm. (B) 15 cm. (C) 4 cm. (D) 8 cm.
2	There is one and only one circle passing through givennon-collinear points.
	(A) two (B) three (C) four (D) five
3	A circle divides the plane, on which it lies, into parts.
	(A) two (B) three (C) four (D) five
4	Angles in the same segment of a circle are  (A) half  (B) double  (C) triple  (D) equal
5	The angle in the semi circle is
J	(A)360° (B)270° (C) 180° (D) 90°
	ASSERTION – REASONING BASED QUESTIONS
	A) both Assertion and reason are correct and reason is correct explanation for Assertion
	B) both Assertion and reason are correct but reason is not correct explanation for Assertion
	C) Assertion is correct but reason is false
	D) both Assertion and reason are false
1	Assertion(A): circle is a plane figure
	Reason(R): circle is a 2d figure and it can be drawn on a plane.
	100
	A
2	Assertion(A): A chord of a circle, which is twice as long as its radius, is a diameter of the circle.
	Reason(R) As we know that any chord whose length is twice as long as the radius of the circle
	always passes through the centre of the circle.
3	Assertion(A): The angles subtended by a chord at any two points of a circle are equal
	Reason(R): Angles in the same segment of circle are equal.
	4Assertion(A): A circle of radius 3 cm can be drawn through two points A, B such that AB=6cm.
4	Reason( R): Through three collinear points a circle can be drawn.
4	Assertion(A): If two chords AB and CD of a circle are each at a distance 4 cm from the centre, then AB = CD.
	Reason( R): Chords equidistance from the centre of the circle are equal in length
	VERY SHORT ANSWER TYPE QUESTIONS
1	Prove that a cyclic parallelogram is a rectangle.
2	O is the centre of a circle and the measure of arc ABC is 100°. Find ∠ADC and ∠ABC.
3	<del>**</del>
	In the given figure, $\angle POQ = 80^{\circ}$ . Then find $\angle PAQ$ .
4	Given are two concentric circles with centre O. A line cuts the circes at A, B, C ad D
	respectively. If $AB = 10$ cm, then find CD.
5	A. P. C and D are the four points on a circle. AC and DD intersect at point E such that
3	A, B, C and D are the four points on a circle. AC and BD intersect at point E such that $\angle BEC = 130^{\circ}$ and $\angle ECD = 20^{\circ}$ . Find $\angle BAC$ .
	B B B B B B B B B B B B B B B B B B B
	-{
	SHORT ANSWER TYPE QUESTIONS

In the figure ABCD is a cyclic quadrilateral. AC and BD are its diagonals. If  $\angle$ DBC =55 ° and  $\angle$ BAC = 55°, find  $\angle$ BCD.

- 2 Prove that "Equal chords of a circle subtend equal angles at the centre"
- 3 how that if two chords of a circle bisect each other they must be diameters.
- In given figure O is the centre of the circle,  $\angle DAB = 50^{\circ}$ , find the value of x and y.

Prove that if opposite angles of a quadrilateral are supplementary then it is cyclic quadrilateral.

Answers: 1.∠BCD=70°

2. Proof 3. Proof 4. x=100 ° y=130° 5. Proof

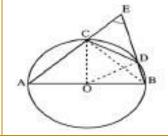

## LONG ANSWER TYPE QUESTIONS

- 1 If two intersecting chords of a circle make equal angles with the diameter passing through their point of intersection, prove that the chords are equal.
- 2 In the figure AB is the diameter of the circle.

CD is a Chord equal to the radius of the circle.

AC and BD when extended intersect at E.

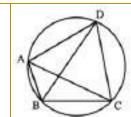

Prove that  $\angle AEB = 60^{\circ}$ 

- Prove that "The angle subtended by an arc of a circle is double the angle subtended by it at any point in the remaining part of the circle".
- In the non-parallel sides of a trapezium are equal, prove that it is cyclic.
- 5 A circular park of radius 20m is situated in a colony.

Three boys Ankur, Syed and David are sitting at equal distance on its boundary each having a toy telephone in his hands to talk each other.

Find the length of the string of each phone.

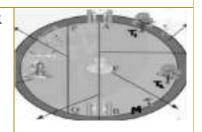

#### **ANSWERS:**

- 1. Proof
- 2. Proof
- 3. Proof
- 4. Proof
- 5. Use the properties of an equilateral triangle and also Pythagoras theorem.

### CASE BASED QUESTIONS

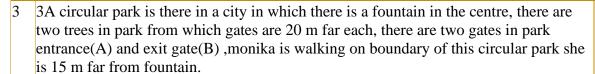

- Ankit visited in a mall with his father. He sees that three shops are situated at P, Q, R as shown in the figure from where they have to purchase things according to their need. Distance between shop P and Q is 8 m, that of between shop Q and R is 10 m and between shop P and R is 6 m.
  - (i) Find the radius of the circle.
  - (ii) Measure of ∠QPR is (OR)
  - (iii) Area of Δ PQR is 18 sq.m (b) 20 sq.m 2 (c) 22 sq.m (d) 24 sq.m

- (iv) In figure, PSQP is known as..
- 2 Four Friends are sitting in a circular table such that distance between first and third is equal to distance between second and fourth which is diameter of circular table
  - 1. If distance between two consecutive friend is not equal and we join all points where friends are there which type of quadrilateral we get?
  - 2. Angle subtended by first friend, second friend at the centre is –
  - 3.If distance between two consecutive friend is equal If we join all points where friends are there which

type of quadrilateral we get?

(OR) 4. Which type of triangle ABC is

- 2. Assume that distance between tree 1 and entrance gate is equal to distance between tree 2 and exit gate then the angle made by fountain with entrance gate and tree 1 and fountain with exit gate and tree 2 are\_\_\_\_.
- 3. If circular park is circle, fountain is its

(OR) 4. PQ in figure is (a) chord (b) diameter (c) centre (d) segment

	triangle with side $u = 0 \times \frac{1}{4} u = \frac{1}{2} \sqrt{3}u$
	MULTIPLE CHOICE QUESTIONS(01 MARK QUESTIONS)
1	The area of a equilateral triangle whose perimeter is 150m is
	(a) $625\text{m}2$ (b) $625\sqrt{3}\text{m}2$ (c) $600\sqrt{3}\text{m}2$ (d) $900\text{m}2$
	<b>A</b> NS: (b) $625\sqrt{3}$ m2
	SOLUTION: Perimeter = $150\text{m} \Rightarrow a = 50\text{m}$
	Area = $\frac{\sqrt{3}}{4} \times a2 = \frac{\sqrt{3}}{4} \times 50 \times 50 = 625 \sqrt{3} \text{ m2}$
	Area = $4 \times a2 = 4 \times 50 \times 50 = 625 \sqrt{3} \text{ m}2$
2	The Perimeter of a triangle is 180cm. Its sides are in the ration 5:3:4 then its greatest side is
	(a) 90cm (b) 75cm (c) 30cm (d) 10cm
	ANS: (b) 75cm SOLUTION: Let the sides be $5x$ , $3x$ , $4x$ ; $5x + 3x + 4x = 180 \Rightarrow x = 15$ ; Greatest side = $5x = 5 \times 15 = 75 \text{ cm}$
3	The area of triangle with given two sides 18cm and 10cm respectively and perimeter equal to 42cm is
_	(a) $20\sqrt{11} \text{ cm}2$ (b) $19\sqrt{11} \text{ cm}2$ (c) $22\sqrt{11} \text{ cm}2$ (d) $21\sqrt{11} \text{ cm}2$
	Ans: (d) $21\sqrt{11}$ cm2
	ANS: (d) 21 V11 cm2
	SOLUTION: $18 + 10 + x = 42 \Rightarrow x = 42 - 28 = 14 \text{cm}$ ; Area = $= \sqrt{21(21 - 18)(21 - 10)(21 - 14)} = 21\sqrt{11} \text{ cm}2$
4	The area of an equilateral triangle with side $6^{\sqrt{3}}$ cm is
	(a) $27 \text{cm} 2$ (b) $27^{\sqrt{3}} \text{cm} 2$ (c) $18^{\sqrt{3}} \text{cm} 2$ (d) $54^{\sqrt{3}} \text{cm} 2$
	<b>A</b> NS: (b) $27^{\sqrt{3}}$ cm <sup>2</sup>
	SOLUTION: Area = $\frac{\sqrt{3}}{4} a2 = \frac{\sqrt{3}}{4} (6\sqrt{3})^2 = 27 \sqrt{3} \text{ cm} 2$
	<b>SOLUTION:</b> Area = $\frac{4}{a^2} = \frac{4}{a^2} = \frac{4}{a^2}$
5	The area of an equilateral triangle with altitude $2^{\sqrt{3}}$ cm is
	(a) $4 \text{cm} 2$ (b) $4^{\sqrt{3}} \text{cm} 2$ (c) $8 \text{cm} 2$ (d) $8^{\sqrt{3}} \text{cm} 2$

Ans: (a) 181cm2 SOLUTION: Let

(a) 181cm2

**ANS**: (b)  $4^{\sqrt{3}}$  cm2

(d) 96cm2

**SOLUTION:** Area of an equilateral triangle with altitude 'P' is  $\sqrt{3}$ ; Area =  $\sqrt{3}$  =4  $\sqrt{3}$  cm2 The perimeter of an isosceles triangle is 64cm. The ratio of the equal side to base is 3:2. Its area is

(c) 180cm2

(b) 32cm2

	S = 32; Area = = $\sqrt{32(32-24)(32-24)(32-16)}$ = $128\sqrt{2}$ cm	12 = 181 cm 2

	ANS: Assertion (A) is false, but Reason (R) is true									
	<b>SOLUTION:</b> Semi Perimeter of triangle with side 2a, 2b, 2c is s I =	= (a+b+c) = 2s								

Area of bigger triangle =  $\sqrt{2s(2s-2a)(2s-2b)(2s-2c)}$ ; =  $4\sqrt{s(s-a)(s-b)(s-c)}$  = 4 × Area of smaller triangle ⇒Ratio is 1:4; Hence Assertion (A) is false but Reason (R) is true

Assertion (A): The area of an equilateral triangle with length of each side as positive integer, is an irrational number

$$\frac{\sqrt{3}}{}$$

Reason (R): The area of an equilateral triangle with  $\frac{4}{}$  a2

ANS: Both Assertion (A) and Reason (R) are true and reason (R) is correct explanation of Assertion (A)

SOLUTION: If 'a' is a positive integer a2 is also a positive integer ;  $\Rightarrow \frac{a^2}{4}$  is rational numbers  $\Rightarrow \sqrt{3} \times \frac{a^2}{4}$  is irrational number

- Assertion (A): Area of a triangle with sides 3cm, 4cm and 5cm is 6cm<sup>2</sup> Reason (R): Heron's formula for area of a triangle is  $\times$  base  $\times$  height ANS: Assertion (A) is true, but Reason (R) is false
- Assertion (A): The area of an isosceles triangle each of whose equal side is 13cm and whose base is 24cm is 60cm2

$$\frac{a}{4}\sqrt{4b^2-a^2}$$

Reason (R): The area of an isosceles triangle having base 'a' and each equal side 'b' is  $\frac{a}{4}\sqrt{4b^2-a^2}$ ANS: Both Assertion (A) and Reason (R) are true and a side 'b' is ANS: Both Assertion (A) and Reason (R) are true and reason (R) is correct explanation of Assertion (A) SOLUTION: The area of an isosceles triangle with base 'a' and each equal side 'b' is

given by Area = 
$$=$$
  $\frac{24}{4}\sqrt{4 \ X \ (13)^2 - (24)^2}$   $\Rightarrow$  Area = 60cm2  
Assertion (A): The sides of a triangle are 16 an, 30cm and 34cm then its area is

240cm2

Reason (R): Heron's formula to find then area of a triangle is  $\sqrt{s(s-a)(s-b)(s-c)}$ 

ANS: Both Assertion (A) and Reason (R) are true and reason (R) is correct explanation of Assertion (A)

Assertion (A): Area of an equilateral triangle with altitude 12cm is  $48\sqrt{3}$ 

Reason (R): Area of an equilateral triangle with altitude 'a' is  $\sqrt{3}$ 

ANS: Both Assertion (A) and Reason (R) are true and reason (R) is correct explanation of Assertion (A)

10 Assertion (A): Heron's formula is for finding the area of scalene triangle Only

Reason (R): The area of a triangle with sides a, b, c is given by

Area: 
$$\sqrt{s(s-a)(s-b)(s-c)}$$

ANS: Assertion (A) is false, but Reason (R) is true

## VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)

Given three sticks of length 10cm, 5cm and 7cm. Find the area enclosed by these three as sides of a triangle

SOLUTION: S = 
$$\frac{10+5+7}{2} = \frac{22}{2} = 11 \text{cm}$$
; Area =  $\sqrt{s(s-a)(s-b)(s-c)} = \sqrt{11(11-5)(11-7)(11-10)} = 2\sqrt{66} \text{ cm}$ 2

The perimeter of an isosceles triangle is 32cm. The ratio of the equal side to base is 3:2. Find the area.

**SOLUTION:** Perimeter  $3x + 3x + 2x = 32 \Rightarrow x = 4cm$ 

Sides are 12cm, 12cm, 8cm

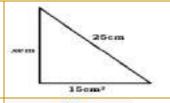

Area = 
$$\sqrt{S(S-a)(S-b)(S-c)}$$
 =  $\sqrt{16(16-12)(16-12)(16-8)}$  =  $32\sqrt{2}$  cm<sup>2</sup>

The sides of a triangular are 13cm, 14cm and 15cm. Find the area of the field.

	13+14+15	42	
SOLUTION: S =	2	$\sqrt{\frac{1}{2}} = 21 \text{cm}$ ; Area = $\sqrt{S(S-a)(S-b)(S-c)} = \sqrt{21(21-13)(21-14)(21-15)}$ ; A	rea
= 84 cm 2			

If the base of a right angled triangle is 15cm and its hypotenuse if 25cm. Find its area. SOLUTION:

Using Pythagoras theory; x = 20 cm; Area = Base × Height =  $\frac{1}{2}$  15 × 20 = 150 cm<sup>2</sup>

AreaTraffic board is equilateral in shape, with words "SCHOOL AHEAD" on if the perimeter of the board is 180cm. Find area of the board.  $3x = 180 \Rightarrow x = 60$ cm

**SOLUTION:** Area of equilateral triangle =  $\frac{4}{4}$  a2 =  $\frac{4}{4}$  × 60 × 60 = 900 $\sqrt{3}$ cm2

The edges of a triangular board are 10cm, 24cm and 26cm. Find the cost of painting it at the rate of Rs.10 per cm2

**SOLUTION:** S = 30; Area = = = 120 cm2; Cost of painting  $120 \times 10 = Rs.1200$ ;

The sides of a triangle plot are in the ratio 3:5:7 and its perimeter is 300m. Find its area.;

**SOLUTION**: Let the sides be 3x, 5x and 7x

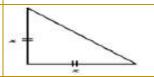

$$3x + 5x + 7x = 300 \Rightarrow x = 20$$
; Sides are 60m, 100m, 140m;  $S = 150$ 

Area =  $= \sqrt{150(150-60)(150-100)(150-140)}$ ; Area =  $1500\sqrt{3}$  m2

Find the area of a triangular board with base 8cm and height 5.5cm.

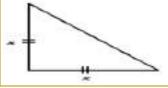

SOLUTION: Area =  $\times$  base  $\times$  Height =  $\times$  8  $\times$  5.5 = 22cm2

If the area of an isosceles right angled triangle is 12.5cm2 then find the length of its hypotenuse. Area of isosceles right triangle

SOLUTION:

$$= \times x2 = 12.5$$
;  $x^2 = 25$ ;  $x = 5$ cm; Hypotenuse  $= \sqrt{5^2 + 5^2} = = 5\sqrt{2}$  cm

10 Find the area of regular hexagon whose side is 4cm

Area of regular Hexagon =  $6 \times \frac{\sqrt{3}}{4}$  a2; =  $6 \times \frac{\sqrt{3}}{4} \times 4 \times 4$ ; =  $24 \sqrt{3}$  cm2 SOLUTION:

## SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)

Find the area of a triangle whose perimeter is 180cm and its two sides are 80cm and 18cm. Calculate the altitude of triangle corresponding to its shortest side.

**SOLUTION:** Given, a = 80, b = 18; Perimeter = a + b + c = 180; 80 + 18 + c = 180; c = 180 - 98 = 82m

S = = 90; Area = 
$$\sqrt{s(s-a)(s-b)(s-c)}$$
 = =  $\sqrt{90(90-80)(90-18)(90-82)}$ 

Area = 720 cm2; Shortest side of triangle = 18 cm; Area =  $\times$  base  $\times$  height

 $720 = \times 18 \times h$ ; h = 80cm; Altitude of triangle corresponding to its shortest side (18cm) is 80cm

Find the area of shaded region in the given figure.

**SOLUTION:** Area of right angled  $\triangle ADB$ ; =  $\times$  base  $\times$  height; =  $\times$  12  $\times$  5; = 30cm2

Using Pythagoras theorem; 
$$AB = \sqrt{AD^2 + BD^2}$$
;  $AB = \sqrt{12^2 + 5^2}$ ;

$$AB = \sqrt{144 + 25}$$
;  $AB = 13cm$ ;  $AB = 13cm$ ,  $AC = 15cm$ ,  $BC = 14cm$ 

$$S = = = 21cm$$
; Area of  $\triangle ABC$ 

$$= \sqrt{S(S-a)(S-b)(S-c)} ; = \sqrt{21(21-13)(21-15)(21-14)} ; = 84 \text{cm} 2$$

Area of shaded region = area of 
$$\triangle ABC$$
 – area of  $\triangle ABD$ 

$$= 84 - 30 = 54$$
cm<sup>2</sup>

**SOLUTION:** Let ABCD be the trapezium

$$AB = 25cm$$
;  $CD = 13cm$ ;  $BC = AD = 15cm$ ;  $Draw CE||AD$ 

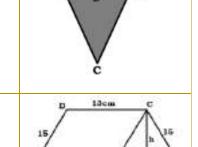

ADCE is a parallelogram; 
$$AE = 13$$
cm,  $EB = 12$ cm;  $In \Delta BCE$ 

S = 21; Area = 
$$\sqrt{S(S-a)(S-b)(S-c)}$$
; Area =  $\sqrt{21(21-15)(21-15)(21-12)}$ 

Area = 
$$\sqrt{21 \times 6 \times 6 \times 9}$$
; Area =  $8\sqrt{21}$  cm2; Let h be the height of triangle  $\triangle BCE$ 

Area 
$$\triangle BCE = \times 12 \times h = 6h \Rightarrow 6h = 18\sqrt{21} \Rightarrow h = 3\sqrt{21}$$
 cm

Area of Trapezium ABCD = 
$$\frac{1}{2}$$
 h (a+b) =  $\frac{1}{2}$ 3  $\sqrt{21}$  x(25+13) = 57  $\sqrt{21}$  cm2

# How much area of triangle will increase in percentage if each side of the triangle is doubled?

**SOLUTION:** Let a, b, c be the sides of triangle, 
$$S = \frac{a+b+c}{2}$$
; Area,  $A_1 = \sqrt{S(S-a)(S-b)(S-c)}$ 

When the sides of triangle are doubled as 2a, 2b, 2c then its Area

$$S_2 = \frac{2a+2b+2c}{2}$$
;  $S_2 = 2S$ ;  $A_2 = \sqrt{2S(2S-2a)(2S-2b)(2S-2c)}$ 

$$=4x\sqrt{S(S-a)(S-b)(S-c)}; A2=4A1; \% \text{ of increase in area} = \frac{Increase \text{ in area}}{original \text{ area}} \times 100 = \frac{3A1}{A1} \times 100 = 300\%$$

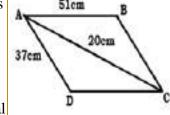

**SOLUTION:** In 
$$\triangle ABC$$
;  $a = 37$ ,  $b = 51$ ,  $c = 20$ ;  $S = = 54$ 

Area of  $\triangle ABC$ 

$$\sqrt{S(S-a)(S-b)(S-c)} = \sqrt{54(54-37)(54-51)(54-20)} = \sqrt{54 \ X \ 17 \ X \ 3 \ X \ 34}$$

= 306m2; Since diagonal divides the parallelogram into two congruent triangle of equal area; Area of parallelogram ABCD =  $2 \times 306$ ; = 612 cm2

## Find the area of the given quadrilateral field if its perimeter is 120m.

**SOLUTION:** 
$$AD = 120 - (40 + 17 + 48)$$
;  $AD = 120 - 105$ ;  $AD = 15m$ 

In right triangle 
$$\triangle ADC$$
;  $AC2 = AD2 + DC2$ ;  $AC = \sqrt{15^2 + 40^2}$ 

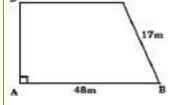

$$AC = \sqrt{225 + 1600}$$
;  $AC = 45m$ ; Area of  $\triangle ADC$ 

Area =  $\times$  base  $\times$  height =  $\times 15 \times 40 = 300 \text{m}2$ 

Area of 
$$\triangle ABC$$
;  $a = 48m$ ,  $b = 17m$ ,  $c = 45m$ ;  $S = \frac{48 + 17 + 45}{2} = \frac{110}{2} = 55$ 

Area of 
$$\triangle ABC$$
;  $a = 48m$ ,  $b = 17m$ ,  $c = 45m$ ;  $S = 2 = 55$ 

Area = 
$$\sqrt{S(S-a)(S-b)(S-c)}$$
; =  $\sqrt{55 \times 7 \times 38 \times 10}$ ; = 2 X 5  $\sqrt{77 \times 19}$ 

## The lengths of the sides of a triangle are 5cm, 12cm and 13cm. Find the length of perpendicular from the opposite vertex to the side length is 13cm.

SOLUTION: 
$$S = \frac{1}{2}(a + b + c) = \frac{1}{2}(5 + 12 + 13) = 15$$

Let 
$$\Delta$$
 be the area of the given triangle. Then,  $\Delta = \sqrt{s(s-a)(s-b)(s-c)}$   $\Delta = \sqrt{15(15-5)(15-12)(15-13)}$ 

 $\Delta = 30 \text{cm} 2$ ; Let p be the length of the perpendicular from vertex A on the side Bc.

Then, 
$$\Delta = \times (13) \times p$$

From (i) and (ii), we get 
$$\frac{1}{2} \times 13 \times p = 30 \Rightarrow p = \frac{60}{13}$$
 cm

8 Calculate the area of the shaded region in Fig:

**SOLUTION**: Lets and s be  $s^1$  be the semi-perimeters of triangles ABC and DBC respectively. Then, s = 132 and  $s^! = 36$  let  $\Delta 1$  and  $\Delta 2$  denote the areas of triangles ABC and DBC respectively. Then,

$$\Delta 1 = \sqrt{s(s-120)(s-122)(s-22)}$$

$$\Delta 1 = \sqrt{132 \ X \ 12 \ X \ 10 \ X \ 110}$$

$$\Delta 1 = \sqrt{12 \ X \ 11 \ X \ 12 \ X \ 10 \ X \ 10 \ X \ 11}$$

$$\Rightarrow \Delta 1 = 10 \ X \ 11 \ X \ 12 cm2 = 1320m2$$
and
$$\Delta 2 = \sqrt{s'(s'-24)(s'-26)(s'-22)}$$

$$\Delta 2 = \sqrt{36(36-24)(36-26)(36-22)}$$

$$\Delta 2 = \sqrt{36 \ X \ 12 \ X \ 10 \ X \ 14} = \sqrt{6^2 \ X \ 2^2 \ X \ 3 \ X \ 2 \ X \ 5 \ X \ 2 \ X \ 7}$$

$$\Rightarrow \Delta 2 = 6 \times 22 \sqrt{3 \times 5 \times 7} = 24 \sqrt{105} \text{ m2}$$
  
 
$$\Delta 2 = 24 \times 10.25 \text{ m2} = 246 \text{m2}$$

Area of the shaded region =  $\Delta 1 - \Delta 2 = (1320 - 246) \text{m} 2 = 1074 \text{m} 2$ 

The sides of a triangular field are 41m, 40m and 9m. Find the number of rose beds that can be prepared in the field. If each rose bed, on an average needs 900cm2 space.

**SOLUTION**: If a, b, c are the sides of a triangle and s is the semi perimeter, then its area  $\Delta$  is given by

$$\Delta = \sqrt{s(s-a)(s-b)(s-c)}$$
Here,  $a = 41$ ,  $b = 40$  and  $c = 9 \Rightarrow s = \frac{1}{2}(a+b+c) = \frac{1}{2}(41+40+9) = 45$ 

$$\Delta = \sqrt{45(45-41)(45-40)(45-9)}$$

$$\Rightarrow \Delta = \sqrt{45 \times 4 \times 5 \times 36} = \sqrt{3^2 \times 5 \times 2^2 \times 5 \times 2^2 \times 3^2}$$

$$\Rightarrow \Delta = 32 \times 22 \times 5 = 180 \text{m} 2$$

Area of each rose beds = 
$$900 \text{cm}2 = \frac{900}{10000} \text{m}2 = 0.09 \text{m}2$$

Number of rose beds = 2000

We observe that 412 = 402 + 92. So, the triangular field is in the form of a right triangle.

Area of the field  $\times 40 \times 9 = 180 \text{m}^2$ 

An umbrella is made by stitching 10 triangular pieces of cloth of two different colours (see fig) each piece measuring 20cm, 50cm and 50cm. how much cloth of each colour is required for the umbrella?

**SOLUTION**: sides of one triangular piece of cloth are of length a 20cm, b = 50cm and c = 50cm. Let s be the semi perimeter of the triangular piece. Then,

$$2s = a + b + c$$
;  $\Rightarrow$   $2s = 20 + 50 + 50$ ;  $\Rightarrow$   $s = 60$ 

Let  $\Delta$  be the area of the triangular piece. Then,

$$\Delta = \sqrt{s(s-a)(s-b)(s-c)}; = \sqrt{60X(60-20)X(60-50)X(60-50)} \text{ cm2}$$

$$\Delta = \sqrt{60 X 40 X 10 X 10} \text{ cm2}; \Delta = \sqrt{6 X 4 X 10 X 10 X 10} \text{ cm2} = 200 \sqrt{6} \text{ cm2}$$

Area of cloth of each colour =  $5 \times 200^{\sqrt{6}}$  cm<sup>2</sup> =  $1000^{\sqrt{6}}$  cm<sup>2</sup>

## LONGANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

International kite festival in Gujarat known as uttarayan is one of the biggest festival celebrated in Gujrat. It is celebrated on the auspicious day of makar sankrati every year. It is the sign for the farmers for the beginning of the summer season. On the day of uttarayan, Suresh a 16 year old boy wants to fly a kite. He ordered a triangle shaped kite of sides 10cm, 10 cm and 12 cm.

10er

On the basis of the above information, solve the following questions:

- ii) Find the area of triangle ABC
- iii) Find the length of AD

(OR)

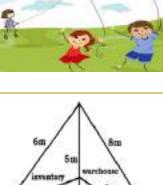

Find the area of  $\triangle ABD$ 

Solution. i)Perimeter =10+10+12=32

ii)areaof
$$\triangle$$
ABC = $\sqrt{16X(16-10)(16-10)(16-12)}$  =48 cm2

iii)area 
$$=\frac{1}{2}$$
 b ×h  $=\frac{1}{2}$  x12x h =48  $\Rightarrow$  h = 8 cm  $\Rightarrow$  AD =8 cm  
OR area of  $\triangle$ ABD  $=\frac{1}{2}$  b ×h  $=\frac{1}{2}$ ×6 × 8 =24 cm2

OR area of 
$$\triangle ABD = \frac{1}{2}b \times h = \frac{1}{2} \times 6 \times 8 = 24 \text{ cm} 2$$

- Ajay bought some land for carrying out his wholesale business as shown in the figure below. He plans to divide this land into 3 parts for warehouse, inventory and canteen. Answer the following questions:
  - a) Find the semi perimeter of the area allotted for inventory
  - b) Find the area allotted for the warehouse
  - c) Find the cost of tiling the canteen floor at the rate of ₹500 per m<sup>2</sup>
  - d) (OR) Find the cost of tiling the inventory at the rate of ₹400 per m<sup>2</sup>

**SOLUTION**. a) sides of inventory are 5 m, 6m, 5m

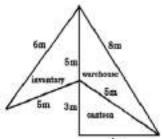

Semi perimeter area allotted for inventory =8 m

b)Sides of warehouse are 5m,5m,8 m

$$s = \frac{a+b+c}{2} = \frac{5+5+8}{2} = 9 \text{ m}$$

$$\Delta = -\sqrt{9 X(9-5)(9-5)(9-8)} = 12 \text{ m}2$$

OR For the inventory 
$$s = \frac{5+5+6}{2} = \frac{16}{2} = 8 \text{ m}$$
; Area  $= \sqrt{8 X(8-5)(8-5)(8-6)} = 12 \text{ m}2$  cost of tiling the inventory  $= 12 \times 400 = 4800$ 

To spread awareness about traffic signal. Central Board of Secondary Education (CBSE) decided to conduct an activity of making a traffic signal board and should take a photo if themselves telling about that particular traffic signal. One of the students decided to make a triangular sign board showing road work ahead. The dimensions of the sign board are 11 cm. 12 cm and 13 cm.

On the bases of the above information, solve the following questions:

If dimension of sign board is given, then which formula is used for finding the covered area.

- b) Find the smallest altitude of a triangle
- c) What is the perimeter of the triangle?

SOLUTION.1) (a) Heron's formula

2) Area = 
$$6\sqrt{105}$$
 cm2

3) (d) 
$$\frac{12}{13}\sqrt{105}$$
 cm

ROAD WORK AHEAD

A quadrilateral is divided into two triangles by one of its diagonals. The lengths of the sides of the quadrilateral are 7cm, 8cm, 5cm, and 6 m, and the diagonal dividing it measures 9cm.

Calculate the area of each triangle formed by the diagonal.

find the area of the quadrilateral

SOLUTION: Given: Quadrilateral with sides: 7cm, 8cm, 5cm, and 6cm; Diagonal dividing the quadrilateral = 9cm

The diagonal divides the quadrilateral into two triangles: Triangle 1: Sides = 7cm, 8cm, and 9cm (the diagonal)

Semi-perimeter: 
$$s = \frac{a+b+c}{2} = \frac{7+8+9}{2} = \frac{42}{2} = 12m$$
;

Semi-perimeter: 
$$s = \frac{a+b+c}{2} = \frac{7+8+9}{2} = \frac{42}{2} = 12m$$
;  
Area =  $\sqrt{s(s-a)(s-b)(s-c)} = \sqrt{12(12-7)(12-8)(12-9)} = \sqrt{720} \approx 26.83 \text{ cm}$ 2

Area of triangle 2:

Semi-perimeter: 
$$s = \frac{a+b+c}{2} = \frac{5+6+9}{2} = \frac{20}{2} = 20 \text{ m}$$

Semi-perimeter: 
$$s = \frac{a+b+c}{2} = \frac{5+6+9}{2} = \frac{20}{2} = 20m$$
  
Area= $\sqrt{s(s-a)(s-b)(s-c)} = \sqrt{10(10-5)(10-6)(10-9)} = \sqrt{200} \approx 14.14 \text{cm} 2$ 

Area of quad = Area of triangle 1 + Area of triangle 2=26.83+14.14=40.97cm2

A triangular roadside garden has side lengths of 5 m, 12 m, and 13 m. A landscape architect wants to cover the entire garden with decorative stones. Each stone covers exactly 1m<sup>2</sup> of area. Find the area of the garden using Heron's formula. How many stones are needed to completely cover the garden? Suppose the architect mistakenly uses the formula  $\frac{1}{2} \times 5 \times 12$  Is this result correct? Justify your answer.

Semi-perimeter: 
$$s = \frac{a+b+c}{2} = \frac{5+12+13}{2} = \frac{30}{2} = 15$$

SOLUTION.Sides: 
$$a = 5 \text{ m}, b = 12 \text{ m}, c = 13 \text{ m}$$
  
Semi-perimeter:  $s = \frac{a+b+c}{2} = \frac{5+12+13}{2} = \frac{30}{2} = 15$   
Area= $\sqrt{s(s-a)(s-b)(s-c)} = \sqrt{15(15-5)(15-12)(5-13)} = \sqrt{900} = 30 \text{ cm}2$ 

Each stone covers 1 m<sup>2</sup>, so:

Number of stones = 30

Architect uses: 
$$\frac{1}{2} \times 5 \times 12 = 30 \text{ cm} 2$$

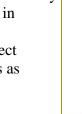

This is correct only because the triangle is right-angled.

$$52 + 122 = 25 + 144 = 169 = 132$$

Yes, the triangle is a right triangle, so using  $\frac{1}{2} \times base \times height$  is valid here.

## CASE BASED OUSTIONS

Animals are an integral part of the nature. Animals also have a role to play in our daily lives. Every animal has a place in the ecosystem in the food chain to keep life in balance. 'Save Animals' must be a made into an awareness program for all to understand the value of animal life. Social workers started a campaign to protect animals. They prepared cardboard banners in the shape of equilateral triangles as shown in the figure.

- (i) If the perimeter of a banner is 120 cm, then find the measure of one side.
- (ii) Find the area of one cardboard banner.
- (iii)If cardboard costs ₹ 1 per 10 cm2, find the total cost of 25. (Take  $\sqrt{3} = 1.73$ )

**SOLUTION.**(i) side =  $\frac{120}{3}$  = 40 cm

(ii)Area=
$$\frac{\sqrt{3}}{4}$$
 a2 =  $\frac{\sqrt{3}}{4}$  x40 x40 = 400 $\sqrt{3}$  cm2

(iii)cost =  $400 \times 1.73 \times \frac{1}{10} \times 25 = \text{Rs}.1730$ 

- Rahul is fond of sceneries. He has decorated his home with many beautiful sceneries in various shapes. One of his friends visited his house and was impressed to see the triangular sceneries there. The dimensions of each triangular frame are 40 cm, 50 cm and 50 cm. Based on the above information answer the following questions:
  - (i) What is the total length of frame of scenery?
  - (ii) If the area of an equilateral triangle is  $5\sqrt{3}$  m2, find the length of each side of the triangle.
  - (iii) Find the area of the wall covered by two triangular scenery?

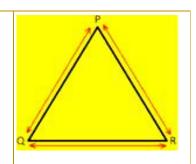

**SOLUTION..**i) length = 50+50+40=140 cm

$$(ii)\frac{\sqrt{3}}{4}$$
 a2 = 5  $\sqrt{3}$   $\Rightarrow$  a2 = 20  $\Rightarrow$  a =  $\sqrt{20}$  =4.47 cm

(ii) 
$$\frac{1}{4}$$
 a2 = 5  $\sqrt{3}$   $\Rightarrow$  a2 = 20  $\Rightarrow$  a =  $\sqrt{20}$  =4.47 cm  
(iii) s =  $\frac{140}{2}$  = 70  $\Rightarrow$  area of one triangle =  $\sqrt{70(70 - 50)(70 - 50)(70 - 40)}$ 

= 
$$200\sqrt{21}$$
 cm2 $\Rightarrow$  area of 2 two scenery =  $400\sqrt{21}$  cm2

In front of TRENDZ WHISPERING WOODS there is a triangular park whose sides are 50 m, 65 m and 65 m. A gardener Sidharaju has to put a fence all around it and also to plant grass inside.

a) How much area does he get to plant?

b) Find the cost of fencing it with barbed wire at the rate of Rs.7 per metre.

Solution. a) s=90; Area=
$$\sqrt{s(s-a)(s-b)(s-c)}$$

$$=\sqrt{90(90-65)(90-65)(90-50)}$$
; =Rs.1500

b) Perimeter =180 m

Cost = 180x 7 = Rs 1260

### **EXERCISE**

- Each side of an equilateral triangle is 6 cm long. The height of the triangle is
  - (a)  $10\sqrt{3}$  cm (b)  $3\sqrt{3}$  cm (c)  $10\sqrt{3}$  cm
- 2 The sides of a triangle are in the ratio 12:17:25 and its perimeter is 540cm. The area is:
  - a. 1000 cm2. b. 5000 cm2 c. 9000 cm2 d. 8000 cm2
- What is the perimeter of a triangle with sides 5 cm, 12 cm, and 13 cm?
  - a) 12 cm
- B) 15 cm
- C) 16 cm
- D) 30 cm

(d) 5 cm

What is the area of a triangle with sides 9 cm, 12 cm, and 15 cm using Heron's formula?

- A) 54 sq. cm B) 72 sq. cm
- C) 108 sq. cm
- D) 216 sq. cm

5 If the sides of a triangle are 8 cm, 10 cm, and 12 cm, then its area using Heron's formula will be:

- A) 30 sq. units B) 40 sq. units
- C) 50 sq. units
- D) 60 sq. units

## **ASSERTION - REASON BASED QUESTIONS**

1 Assertion(A): The area of an isosceles triangle each of whose equal side is 13 cm and whose base is 24cm is 60cm2

Reason(R): The area of an isosceles triangle having base a and each equal side b is  $\frac{b}{4}\sqrt{4a^2-b^2}$ 

Assertion: The height of a triangle is 18 cm and its area is 72cm2 then its base is 8cm

Reason: The area of a triangle= $\frac{1}{2}$  x base x height

Assertion: The side of an equilateral triangle is 6 cm then its area is  $9\sqrt{3}$  cm<sup>2</sup>

Reason: All sides of an equilateral triangle are equal

Assertion: The area of a triangle= $\sqrt{s(s-a)(s-b)(s-c)}$ 

Reason:  $s = \frac{a+b+c}{2}$ 

Assertion :In a right angled triangle if the hypotenuse is  $5\sqrt{2}$  then the other two sides are equal to 5cm each

Reason: In a right angled triangle  $(base)^2 + (perpendicular)^2 = (Hypotenuse)^2$ 

## **VERY SHORT ANSWER QUESTIONS(2 MARKS)**

- The sides of triangle are 8 cm, 15cm, 17 cm. Find the area
- Find the Perimeter of an isosceles right angled triangle having an area 5000 m2 (use  $\sqrt{2} = 1.41$ )
- Find the area of an isosceles triangle whose one side is 10cm greater than each of its equal sides and perimeter is 100 cm.

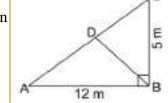

- The sides of triangle are 100cm, 120cm and 140cm. Find its area.(use  $\sqrt{6} = 2.45$ )
- If the base of an isosceles right angled triangle is 10cm, then find its area.

## SHORT ANSWER QUESTIONS(3 MARKS)

- The perimeter of a triangular garden is 900 cm and its sides are in the ratio 3:5:4 find the area of triangular garden.
- Find the area of a triangle whose perimeter is 180cm and its two sides are 80cm 18cm. Calculate the altitude of triangle corresponding to its shortest side.
- Find the area of area of an equilateral triangle whose perimeter is 62 cm(use  $\sqrt{3} = 1.73$ )
- Find the area of triangle with sides 35 cm 54 cm 61cm
- LONGANSWER TYPE QUESTIONS
- Mayank bought a triangle shape field and wants to grow potato and wheat on his field. He divided his field by joining opposite sides. On the largest park he grew wheat and on the rest part he grew potato. The dimensions of a park are shown in the park.

On the basis of the above information, solve the following questions:

- i) Find the length of AC in  $\triangle$ ABC.
- ii) Find the area of  $\triangle ABC$ .
- iii) If the cost of ploughing park is ₹5 per cm2, then find the total cost of ploughing the

Find the formula of area of equilateral triangle using Herone's formula

## CASE BASED QUESTIONS

While selling clothes for making flags, a shopkeeper claims to sell each piece of cloth in the shape of an equilateral triangle of each side 10 cm while actually he was selling the same in the shape of an isosceles triangle with sides 10 cm, 10 cm and 8 cm i)Find the area of an equilateral triangular flag?

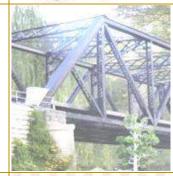

iii) Find the area of an isosceles triangular flag.

- Triangles are used in bridges because they evenly distribute weight without changing their proportions. When force is applied on a shape like rectangle it would flatten out. Before triangles were used in bridges, they were weak and could not be very big. To solve that problem engineers would put a post in the middle of a square and make it more sturdy. Isosceles triangles were used to construct a bridge in which the base and equal sides of an isosceles triangle are in the ratio 1:2:2 and its perimeter is 200 m.
  - i) What are the measurements of the sides of an isosceles triangle?
  - ii). Find the semi-perimeter of the above triangle.
  - iii) What is the area of the above isosceles triangle?
- A craft mela is organized by Welfare Association to promote the art and culture for tribal people. Fairs and festivals are the custodians of our great cultural heritage. The pandal is to be decorated by using triangular flags around the field. Each flag has dimensions 25 cm, 25 cm and 22 cm.

c) Find the area of cloth required for making 300 such flags in m2.

### HOTS

- A triangular park has sides 40m, 30m, and 50m. Find the area of the park and the cost of fencing it at ₹50 per
- A farmer has a triangular field with sides 100m, 120m, and 150m. Calculate the area of the field and the cost of irrigation at ₹20 per square meter.

- A triangular advertisement board has sides 10m, 12m, and 14m. Find the area of the board and the cost of painting it at ₹30 per square meter.
- If the sides of a triangle are in the ratio 3:4:5, what can be inferred about the triangle? Use Heron's Formula to support your answer.
- A triangle has sides a, b, and c. If a + b = c, what can be said about the area of the triangle? Use Heron's Formula to justify your answer.

5)A

### **ANSWERS**

### MCQ

1) b 2) c 3) d 4) a 5) c

### ASSERTION- REASONING QUESTIONS

1)A 2)A 3)B 4)B

### VERY SHORT ANSWER QUESTIONS

1) 60 cm 2 2) 341 m 3)  $200\sqrt{5} \text{cm} 2$  4) 5880 cm 2 5) 50 cm 2

## SHORT ANSWER QUESTIONS

1)225 cm, 375 cm, 300cm are sides and area= 3.375 m2

2)80cm 3)8.948 cm2 4)939.68cm2

### CASE STUDY QUESTIONS

i) 43.30cm2 ii)14cm iii)36.67 cm2

i) 40 m, 80 m, 80m ii)100m iii) $400\sqrt{5}$  m2

i)36 cm ii)246.84cm iii)7.4052m2

### 5 MARK QUESTIONS

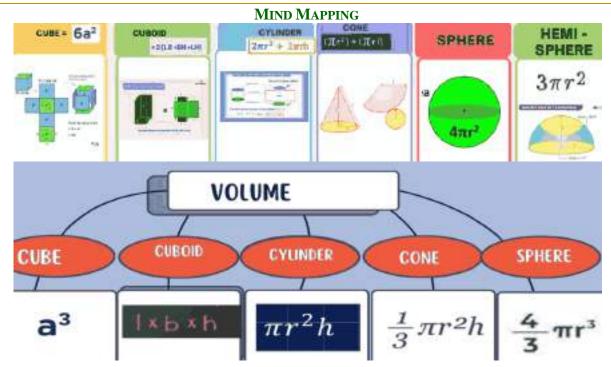

1)i) 13 m ii)30m2 iii) Rs.150

2)  $\frac{\sqrt{3}}{4}$  a2 where a is length of the side

### HOTS

- 1) Area = 600 m2, cost \$60002) area = 6066.25 m2, cost = \$121325
- 3) area = 58.8m2, cost = ₹1764
- 4) The triangle is a right-angled triangle  $(3^2 + 4^2 = 5^2)$ . Using Heron's Formula, we can verify that the area is indeed  $\frac{1}{2}$ × base × height.
- 5)If a + b = c, the triangle is degenerate (has zero area). Using Heron's Formula, s = (a+b+c)/2 = c, and the area would be  $\sqrt{(c(c-a)(c-b)(0))} = 0$ .

## CHAPTER – 11 SURFACE AREA AND VOLUME

### **GIST/SUMMERY**

Surface area of a solid object

Surface area and volume of cube, cuboid, cone, cylinder

**DEFINITIONS AND FORMULAE:** 

- Lateral Surface Area of any prism= Perimeter of Base x height
- Volume of any prism = Base Area X Height
- THIS RULE WORKS FOR CUBE, CUBOID and CYLINDER

**CUBE**: LSA = $4a^2$  TSA = $6A^2$  VOLUME = $a^3$ 

CUBOID: LSA = 2(lh + bh) TSA = 2(lb + bh + hl) VOLUME = lbh

**CYLINDER**: LSA =  $2\pi rh$  TSA =  $2\pi r (r+h)$  VOLUME =  $\pi r^2 h$ 

CONE: LSA =  $\pi rl$  TSA=  $\pi r (r + l)$  VOLUME =  $\frac{1}{3}\pi r^2 h$ 

**SPHERE**: CSA = TSA=  $4\pi r^2$  VOLUME =  $\frac{4}{3}\pi r^3$ 

**HEMISPHERE**: CSA =  $3\pi r^2$  TSA=  $4\pi r^2$  VOLUME =  $\frac{2}{3}\pi r^3$ 

## SURFACE AREA

This refers to total surface area covered by outer surface area of solid object. It is measured in square units (like cm<sup>2</sup> or m<sup>2</sup> or km<sup>2</sup>). To find the area to be painted ,designing labels for c Solution: or boxes, determining the surface area of floors, roofs, or walls to estimate material costs (tiles, plaster, insulation) are based on the surface area.

### VOLUME

This represent the amount of space occupied m by solid. It is measured in cubic units (like cm<sup>3</sup> or m<sup>3</sup> or km<sup>3</sup>)tTo find the capacity of a container /package and storage space/filling of a 0

Volume of a cone is one third of volume of a cylinder.

Volume of a hemisphere is half of volume of a sphere.

### MULTIPLE CHOICE QUESTIONS (01 MARK QUESTIONS)

If the volume of a right circular cone of height 9cm is  $48\pi$  cm<sup>3</sup>, then the diameter of its base is:

a)4 b)8 c)12 d)6

**SOLUTION:** b) V =  $48\pi$  cm<sup>3</sup>,  $\frac{1}{3}\pi$  r<sup>2</sup> x9 =  $48\pi$ ; r<sup>2</sup> = 16 then r = 4 cm and diameter = 8 cm If the volume and surface area of a sphere are numerically equal, then its radius is: c)3 unit b) 2 unit SOLUTION: c)3 unit; Volume = Surface Area  $\Rightarrow \frac{4}{2}\pi r^3 = 4\pi r^2 \Rightarrow r=3$  unit A cylindrical pencil sharpened at one edge is the combination of: a) a cone and a cylinder b) a cone and a hemisphere c) a frustom of a cone and cylinder c) a hemi sphere and a cylinder **SOLUTION**: a) a cone and a cylinder In a cylinder, radius is doubled and height is halved, curved surface area will be: b)doubled a)halved c)no change d)four times **SOLUTION**:c) no change Here radius= 2r, height =  $\frac{h}{2}$  $CSA = 2\pi rh = 2\pi (2r) \frac{h}{2} = 2 \pi rh$ A cylindrical water tank has a radius of 7 meters and a height of 10 meters. How much water it can hold? a) 1540 m<sup>3</sup> c) 15400 m<sup>3</sup> b) 154 m<sup>3</sup> d) 154000 m<sup>3</sup> SOLUTION:a) 1540 m<sup>3</sup> Volume of a cylinder =  $\pi r^2 h$ Here, r=7 meters and h=10 meters. Volume =  $\pi \times 49 \times 10 = \frac{22}{7} \times 49 \times 10 = 1540 \text{ m}^3$ . An ice cream is in the shape of a cone with a radius of 4 cm and a height of 9 cm. What is the volume of theicecream? a) 113.1 cm<sup>3</sup> b) 150.8 cm<sup>3</sup> c) 230.4 cm<sup>3</sup> d) 402.2 cm<sup>3</sup> SOLUTION:b) 150.8 cm<sup>3</sup> Volume of cone =  $\frac{1}{3} \pi r^2 h = \frac{1}{3} x \frac{22}{7} x 16 x 9 = 144 x \frac{1}{3} x \frac{22}{7} = 150.8 \text{ cm}^3$ Diameter of a sphere is 10 cm. Its surface area is: (consider  $\pi = 3.14$ ) a)31400 cm<sup>3</sup>  $c)3.14 \text{ cm}^3$ b)314 cm<sup>3</sup> SOLUTION: b)314 Radius =  $\frac{1}{2}$  x diameter =  $\frac{1}{2}$  x 10 = 5cm Surface area =  $4 \pi r^2 = 4 \times 3.14 \times 5 \times 5 = 100 \times 3.14 = 314$ A hemisphere has a radius of 7 cm. What is the volume of the hemisphere? a)  $\frac{700}{3} \pi \text{ cm}^3$  b)  $\frac{700}{2} \pi \text{ cm}^3$  c)  $\frac{686}{3} \pi \text{ cm}^3$  d)  $\frac{343}{2} \pi \text{ cm}^3$ SOLUTION: c)  $\frac{686}{3}$   $\pi$  cm<sup>3</sup> A cone, a hemisphere and a cylinder stand on equal bases and have the same height. The ratio of their volumes is d) 1:2:3 b) 2:1:3 c) 2:3:1 **SOLUTION**: d)1:2:3; Ratio is  $\frac{1}{3}\pi r^2 h : \frac{2}{3}\pi r^2 h : \pi r^2 h$  but given that h = r So ratio is  $\frac{1}{3} \pi r^2 r : \frac{2}{3} \pi r^2 r : \pi r^2 r : \pi r^2 r : \pi r^3 : \frac{1}{3} \pi r^3 : \frac{2}{3} \pi r^3 : \pi r^3 \Rightarrow 1:2:3$ 10 What is the radius of a hemisphere whose volume is  $144\pi$  cm<sup>3</sup> a) 6 cmb) 8 cm c) 12 cm **SOLUTION**: a)6 cm; Volume of a hemisphere  $=\frac{2}{3}\pi r^3 = 144 \pi$ ; Hence  $r^3 = \frac{144 \times 3}{2}$  implies r = 6 cm ASSERTION – REASON BASED QUESTIONS Assertion: If the radius of right circular cone is halved and height is doubled the volume will be halved Reason: Volume of a cone is  $\frac{1}{3}\pi r^2 h$ SOLUTION:a) Both assertion (A) and reason (R) are true and reason (R) is the correct explanation of assertion (A)

Here new  $r = \frac{r}{2}$  new height h = 2h

Volume =  $\frac{1}{3}\pi \left(\frac{r}{2}\right)^2 (2h) = \frac{1}{2} \left(\frac{1}{3}\pi r^2 h\right) = \frac{V}{2}$ 

Assertion (A): The total surface area of a sphere is given by the formula  $4\pi r^2$ .

Reason(R): The sphere has only one curved surface, and its area is calculated using the formula for the lateral surface area of a cylinder

SOLUTION:A

Assertion (A): The volume of a cylinder of radius r and height h is given by  $\pi r^2 h$ .

Reason (R): A cylinder can be thought of as a stack of circular discs, each with area  $\pi r^2$ , and the height h determines the number of such discs stacked together

SOLUTION: A

Assertion (A): The total surface area of a sphere is given by the formula  $4\pi r^2$ 

Reason (R): The formula for the curved surface area of a sphere is  $2\pi r^2$ 

SOLUTION:C

5 Assertion (A): The surface area of a sphere increases when its radius increases.

Reason (R): The formula for the surface area of a sphere is  $4\pi r^2$ , which depends on the square of the radius.

SOLUTION: A

Assertion (A): The volume of a cylinder is greater than the volume of a cone having the same base radius and height.

Reason (R): The volume of a cylinder is given by  $\Pi r^2 h$ , whereas the volume of a cone is  $\frac{1}{2}\pi r^2 h$ 

SOLUTION: A

Assertion (A): The surface area of a cone is  $\pi r(r+1)$ , where 1 is the slant height.

Reason (R): The curved surface area of a cone is  $\pi rl$ , and the base area is  $\pi r^2$ .

SOLUTION: A

8 Assertion (A): The curved surface area of a cylinder is  $2\pi rh$ 

Reason (R): The curved surface area is the area of the side of the cylinder, along with the top and bottom.

SOLUTION: C

Assertion (A): The total surface area of a hemisphere is  $3\pi r^2$ 

Reason (R): The total surface area includes the curved surface area  $2\pi r^2$  and the base area  $\pi r^2$ 

SOLUTION:A

10 Assertion (A): The curved surface area of a sphere is  $4\pi r^2$ 

Reason (R):A sphere has no edges or vertices, and its surface area is uniform.

SOLUTION:B

## VERY SHORT ANSWER TYPE QUESTIONS (2 MARKS QUESTIONS)

A tent is in the shape of a cone. Its base radius is 6 m and slant height is 10m. Find the area of cloth required to make the tent.

**SOLUTION:** r= 10m, l= 10m; Area of cloth =  $\pi rl = \frac{22}{7} \times 6 \times 10 = 188.57 \text{ cm}^2$ 

2 Neha wants to gift a spherical glass ball to her friend. The radius of the ball is 4.2 cm.

Find the surface area of the glass ball.

**SOLUTION:** r = 4.2 cm; Surface area =  $4\pi r^2 = 4 \times \frac{22}{7} \times 4.2 \times 4.2 = 221.76 \text{cm}^2$ 

A juice can is in the shape of a cylinder. Its radius is 7 cm and height is 20 cm. Find the curved surface area of the can.

SOLUTION: r=7cm, h= 20cm; CSA of the cylinder is =  $2\pi rh = 2 \times \frac{22}{7} \times 7 \times 20 = 880 \text{cm}^2$ 

Ravi is painting the four walls of his room. The room is 5 m long, 4 m wide, and 3 m high. He does not paint the ceiling and floor. Find the total area he painted.

SOLUTION: Here l=5m, b =4m, h =3m; Area to be painted =CSA of cuboid=  $2(1+b) \times h = 2(5+4) \times 3 = 54m^2$ 

A company packs soap bars in cuboidal boxes. Each box measures  $12 \text{ cm} \times 8 \text{ cm} \times 5 \text{ cm}$ .

Find the volume of the box.

**SOLUTION:** l = 12cm, b = 8cm, h = 5cm; volume of the Soap box =  $lbh = 12 \times 8 \times 5 = 480cm^3$ 

A water tank is in the shape of a cuboid of dimensions 2 m  $\times$  1.5 m  $\times$  1 m. It is full of water. How many litres of water does it hold? (1  $m^3 = 1000$  litres)

**SOLUTION:** 1 = 2m, b = 1,5m, h = 1m; Volume =  $1bh = 2 \times 1.5 \times 1 = 3$   $m^3 = 3 \times 1000$  liters

Curved surface area of a cone is 308cm<sup>2</sup> and its slant height is 14cm.find theradius of the base.

**SOLUTION:** CSA of the cone =  $308 \text{cm}^2$  and 1 = 14 cm;  $\pi r 1 = 308 \Rightarrow \frac{22}{7} \times r \times 14 = 308 \Rightarrow r = \frac{308x \, 7}{22x \, 14} = 7 \text{cm}$ 

The height of a cone is 15 cm. If its volume is 1570 cm<sup>3</sup>. find the radius of the base (Take  $\pi$ =3.14) Volume of the cone =  $1570 \text{cm}^3$ , h= 15 cm

SOLUTION:  $\frac{1}{3}\pi r^2 h = 1570 \text{ cm}^3 \Rightarrow \frac{1}{3} \text{ x} \cdot 3.14 \text{ xr}^2 \text{x} \cdot 15 = 1570. \Rightarrow \text{r} = 10 \text{ cm}$ 

A hollow spherical shell is made of a metal of density 4.5 g per cm3. If its internal and external radii are 8cm and 9cm respectively, find he weight of the shell.

**SOLUTION:** r = 8 cm R = 9 cm.; Difference in volume  $= \frac{4}{3}\pi R^3 - \frac{4}{3}\pi r^3 = \frac{4}{3} \times \frac{22}{7} (93-83) = 909.33 \text{cm}^3$ Weight =  $909.33 \times 4.5 = 4091.985g = 4092 g$ 

10 Curved surface area of a cone is 308 cm<sup>2</sup> and its radius is 14cm. Find the slant height of its base.

SOLUTION: CSA of the cone is  $308 \text{cm}^2$ , , r= 14cm;  $\pi \text{rl} = 308 \Rightarrow \frac{22}{7} \text{x} 14 \text{xl} = 308 \Rightarrow \text{l} = 7 \text{cm}$ 

## SHORT ANSWER TYPE QUESTIONS (3 MARKS QUESTIONS)

The radius and height of a cone are in the ratio 4:3. The area of the base is 154 cm<sup>2</sup>. Find the area of the curved surface.

SOLUTION:-

Let the radius & height be 4x & 3x restively

Let the radius & height be 
$$4x \& 3x$$
 restrively
$$\pi r^2 = 154$$
Area of base =  $154 \text{cm}^2 \Rightarrow \frac{22}{7} \times 4x \times 4x = 154$ 

$$= 154 \Rightarrow \text{Radius} = 4x = 7 \text{cm} \text{ ; Height } -3x = \frac{21}{4} \text{cm}.$$

CSA of the cone = 
$$\pi r l$$
;  $l = \sqrt{h^2 + r^2} = \sqrt{\left(\frac{21}{4}\right)^2 + (7)^2} = \frac{35}{4} \text{ cm.}$ ;  $\pi r l = \frac{22}{7} \times 7 \times \frac{35}{42} = 11 \times 17.5$ 

 $\therefore$  CSA of the cone = 192.5cm<sup>2</sup>

The base radii of two right circular cones of the same height are in the ratio 3:5. Find the ratio of their volumes.

SOLUTION:

Let the two cones be A&B and their radius be 3x &5x both of height ' h' cm.

$$\frac{Vdl_A}{VdB} = \frac{\frac{1}{3}\pi(r_A)^2h}{\frac{1}{3}\pi(r_B)^2h}$$
$$= \left(\frac{r_A}{r_B}\right)^2 = \left(\frac{3x}{5x}\right)^2$$
$$\therefore \frac{Vdl_A}{VdB} = \frac{9}{25}$$

How many spherical balls can be made of a lead cylinder 28cm high and base radius 6 cm. if each ball is 1.5 cm in diameter?

SOLUTION:

Let the number of balls made be 'n'.; Then, Vol. of lead cylinder = n (Volume of sphere)

$$\pi r^{2} h = nx + \frac{4}{3}R^{3}; 6 \times 6 \times 28 = n \left[ \frac{4}{3} \times \frac{15}{20} \times \frac{15}{20} \times \frac{15}{20} \right]; 6 \times 6 \times 28 = \frac{n \times 15 \times 15}{20 \times 20}; 36 \times 28 = \frac{n \times 9}{16}$$

$$n = \frac{36 \times 28 \times 16}{9}$$
;  $\therefore$  1792 spherical balls can be made.;   
  $n = 1792$ 

Find the amount of water displaced by a solid spherical ball of diameter 4.2 cm, when it is completely immersed in water.

**SOLUTION**: Volume of displaced water = Volume of spherical ball;

$$= \frac{4}{3}\pi r^{3}$$

$$= \frac{4}{3} \times \frac{22}{7} \times \frac{42}{20} \times \frac{42}{20} \times \frac{42}{20}$$

$$= \frac{441 \times 11}{125}$$

$$= \frac{4851}{125}$$

$$= 38.8 \text{cm}^{3}$$

∴ Volume of displaced water = 38.8ml

A school provides milk to the students daily in a cylindrical glass of diameter 7 cm. If the glass is filled with milk up to a height of 12 cm, find how many litres of milk is needed to serve 1600 students.

**SOLUTION**: Volume of cylindrical glass =  $\pi r^2 h$ 

Volume of 1 cylindrical glass =  $462 \text{cm}^3$ 

$$= \pi r^{2}h$$

$$= \frac{22}{7} \times \frac{7}{2} \times \frac{7}{8} \times 12$$

$$= 77 \times 6$$

$$= 462 \text{cm}^{3}$$
Required volume =  $\frac{462 \times 1600}{462 \times 1600}$ 

$$= 739200 \text{cm}^{3}$$

= 739200cm = 739200ml Required vel. = 739.2L

A cylindrical road roller 2.5 m in length, 1.75 m in radius when rolled on a road was found to cover the area of 5500 m<sup>2</sup>. How many revolutions did it make?

**Solution**: 
$$5500$$
m<sup>2</sup>=  $n$  (CSA of roller)

$$= n \times 2\pi rh$$

$$5500 = n \times \frac{22}{7} \times 2 \times 1.75 \times \frac{25}{10}$$

$$n = \frac{5500 \times 7 \times 14 \times 10}{22 \times 2 \times 175 \times 251}$$

$$= \frac{20}{1200 \times 7 \times 10}$$

$$n = 200 \text{ revolution es.}$$

A shopkeeper has one spherical laddoo of radius 5cm. With the same amount of material, how many laddoos of radius 2.5 cm can be made?

SOLUTION:Let no. of laddoos of 2.5 cm radius be 'n'.

Then,

volume of big laddoo= n (volume of smaller laddoo)

$$\frac{4}{3}\pi R^{3} = n \times \frac{4}{3}\pi r^{3}$$

$$5 \times 5 \times 5 = n \times \frac{25}{10} \times \frac{25}{10} \times \frac{25}{10}$$

$$n = \frac{5 \times 5 \times 5 \times 10 \times 10^{2} \times 10^{2}}{\frac{25}{5} \times \frac{25}{5} \times \frac{85}{5}}$$

A solid metal sphere with a radius of 6 meters is melted and recast into smaller spherical balls, each with a radius of 3 meters. How many such smaller spheres can be made?

Volume of bigger ball = n (Volume of smaller ball)

$$\frac{4}{3}\pi R^3 = n \times \frac{4}{2}\pi r \gamma^3$$

$$6 \times 6 \times 6 = n \times 3 \times 3 \times 3$$

$$n = 8 \text{ balls}$$

A company is designing decorative steel balls to place in a garden. Each ball is a perfect sphere and is coated with a special paint that costs ₹88 per square meter. If the radius of each ball is 7 meters, how much will it cost to paint 3 such balls completely?

**SOLUTION**: ,TSA of 1 ball =  $4\pi r^2$ 

$$=4\times\frac{22}{7}\times7\times7$$

TSA of 1 ball = 
$$88 \times 7 = 616$$
cm<sup>2</sup>

TSA of 3 balls = 
$$616 \times 3$$
cm<sup>2</sup>

Cost of painting =  $616 \times 3 \times 88 = 1,62,624$ 

- 10 A factory produces two types of spherical tanks: Type A and Type B. The radius of Type A tank is 6 meters. The radius of Type B tank is twice that of Type A. The outer surface of each tank needs to be coated with a special anti-corrosion material. The cost of coating is the same per square meter for both tanks. If coating 3 Type A tanks costs the same as coating 1 Type B tank, which of the following is most logically valid? Options:
  - A) The surface area of Type B tank is 3 times that of Type A tank.
  - B) The surface area of Type B tank is 4 times that of Type A tank.
  - C) The surface area of Type B tank is 2 times that of Type A tank.
  - D) The surface area of Type B tank is equal to the total surface area of 3 Type A tanks.

SOLUTION: Type A TSA = 
$$4\pi r^2 = 4\pi 6^2$$
  
Type B TSA =  $4\pi R^2 = 4\pi 12^2$ 

Type B TSA = 
$$4\pi R^2 = 4\pi 12^2$$

$$\frac{TSA}{TSA} = \frac{16\pi \cdot 6^2}{4\pi \cdot 6^2} = 4$$

 $\Rightarrow$  (B) The surface area of Type B tank is 4 times that of Type A

## LONGANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

- A company is designing eco-friendly water storage tanks in the shape of a closed cylinder (with top and bottom). Each tank has a radius of 1.5 meters and a height of 2 meters. The tanks are made of recycled aluminium, and the outer surface needs to be coated with a protective paint to prevent rust and heat absorption.
  - a) Calculate the total surface area of one cylindrical tank that needs to be painted.
  - b) How many litres of water can the tank hold?

**SOLUTION:** a) TSA of the tank = 
$$2\pi r$$
 ( h+r); =  $2 \times \frac{22}{7} \times 1.5 \times (3.5)$ ; TSA of the tank is =  $33 \text{m}^2$ 

b) 
$$1m2 = 1000L$$
;  $33m^2 = 33 \times 1000 = 33000$  liters

- A small-scale ice cream factory produces cone-shaped ice cream cones. Each cone has a radius of 3.5 cm and a height of 12 cm. The company wants to ensure accurate filling of the cones with ice cream.
  - a) Calculate the volume of ice cream that can fill one cone completely.
  - b) The company has to make labels for the ice cream cones with name of the company. Find the surface area of the name stickers required.

**SOLUTION**: :a) Volume of the cone = 
$$\frac{1}{3} \pi r^2 h$$
; =  $\frac{1}{3} X \frac{22}{7} x \frac{35}{10} x \frac{35}{10} x 12$   
Volume of the cone =  $154 \text{cm}^3$ 

$$= 154 \text{cm}^3$$

b) 
$$1 = \sqrt{h^2 + r^2}$$
;  $= \sqrt{12^2 + 3 \cdot 5^2}$ ;  $= 12.5$ cm

CSA of the cone = 
$$\pi rl$$
; =  $\frac{22}{7}$  X3.5 X12.5; = 137.5cm<sup>2</sup>

- In a newly constructed park which is situated in the heart of a city Hyderbad, an architect has form a structure in the given shape. The shape has a cuboid, which is standing on the two cylindrical beams. The dimensions of the cuboid are 1.5 m, 3 m and 0.5 m. The dimensions of the cylinders are of height 2 m and diameter 0.6 m.
  - (i) As the structure is made from the concrete, how much volume of concrete is regired to make the cuboidal shape?
  - (ii) What is formula for calculating the lateral surface area of the cylinder?
  - (iii) What is the volume of two cylinders?

**SOLUTION:** i) Volume of the cuboid = lbh

$$= 3 X1.5 X 0.5$$

Volume of the concrete required =  $2.25 \text{m}^3$ 

ii) LSA of the cylinder is

$$= 2\pi r^2 h$$

iii) Volume

= 2 X volume of the cylinder  
= 2 
$$X \frac{22}{7} x \frac{3}{10} \times \frac{3}{10} \times 2$$
  
= 1 131 m<sup>3</sup>

- Mathematics teacher bring some green colour clay in the classroom to teach the topic menstruation first forms a cylinder of radius 6 cm and height 8 cm with the clay then he moulds that cylinder into sphere similarly he moulds sphere into other different shapes. Solution: wer the following questions.
  - a) What is the volume of the cylindrical shape?
  - b) What is the volume of sphere?
  - c) When clay changes into one shape to another which of the following remains same?
  - i) volume ii) area iii)CSA iv) Radius
  - d) What the radius of the sphere formed?

**SOLUTION**: a) volume of the cylinder

$$=\pi r^2$$

Volume of the cylinder

cylinder = 
$$\pi r^2 h$$
  
=  $\frac{22}{7} X6x6x8$   
=  $905.14 \text{cm}^3$ 

b) Volume of the Sphere

c) (i) Volume

$$d) \qquad \frac{22}{7} X6x6x8$$

Volume
$$\frac{22}{7} X6x6x8 = \frac{4}{3} X \frac{22}{7} XR^{3}$$

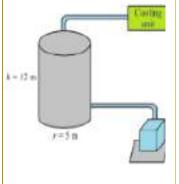

$$R = 6cm$$

$$R = 6cr$$

- One day teacher planned to take all the Class X students to the milk factory (Chilling plant) and asked the students to observe it carefully. Refer to this plant, its machinery is shown below. It is related to some solid shapes, which we study in our curriculum.
  - a) Refer to cylindrical container; calculate the quantity of milk it can store.
  - b) What is the formula for calculating the total surface area of the cylindrical container i.e., milk container?
  - c) If the cube shown in the picture is of dimension 6 cm each. Find the capacity of this cubic container.

$$=\pi r^2 h$$

$$=\frac{22}{7}$$
 X5X5x12

 $= 942.85 \text{ m}^3$  $1m^3$ = 1000liters = 942850liters

The cylindrical container can hold an amount of 942850 liters of milk

b) TSA of the cylinder  $= 2\pi r (h+r)$  $= a^3 = 6^3 = 216m^3$ c) Volume of the cube

 $= 216 \times 1000$  liters

= The capacity of the cube is 216000 liters

## CASE BASED QUESTIONS (4 MARK EACH)

A company is designing decorative paper cones to be used as packaging for party hats. Each cone has a radius of 7 cm and a slant height of 25 cm. The outer surface of each cone will be covered with colourful paper as a packaging designer, you are asked to: Calculate how much colourful paper (in cm<sup>2</sup>) is needed to cover the curved surface of one cone. If the company wants to include a circular base at the bottom of the cone, how much total surface area will be covered?

If the company to make 100 such cones, how much paper will be needed in total?

SOLUTION: a) CSA of the cone = $\pi rl = \frac{22}{7} \times 7 \times 25$ 

Required paper for colour paper

For one cone  $= 550 \text{cm}^2$ 

=  $\pi$ r (1+r); =  $\frac{22}{7}$ x7 (25+7); = 32x22; = 704cm<sup>2</sup>. b) TSA of the cone

c) Required area = CSA of the cone x 100; = 5500cm<sup>2</sup>

- A toy manufacturing company is designing rubber balls with a diameter of 14 cm. The entire surface of each ball is to be painted with a glossy finish. As a quality control supervisor, you are required to:
  - a) Calculate the surface area of one ball that needs to be painted.
  - b) If 100 such balls are to be painted, how much total surface area will be covered?
  - c) If 1 cm<sup>2</sup> of paint costs ₹0.10, calculate the total cost to paint 100 balls.

SOLUTION:

- $= 4\pi r^{2}$ =  $4X \frac{22}{7} X 7X7$ =  $616 \text{cm}^{2}$ a) TSA of one ball
- $= 100X616 = 61600cm^{2}$ b) TSA of 100 balls
- $1 \text{cm}^2$ = 0.10c) 61600cm<sup>2</sup>  $= 61600 \times 0.10$ Cost = ₹6160
- A company is producing cylindrical tin Solution: to store food items. Each can has a radius of 7 cm and a height of 20 cm. The outer surface of the can, including the top and bottom, will be labelled with printed material. As part of the production team, you are assigned to:
  - a) Calculate the total surface area of one can that needs to be labelled.
  - b) If the company needs to produce 250 such Solution:, find the total surface area to be covered.
  - c) If 1 cm² of labelling costs ₹0.05, calculate the total labelling cost for all 250 cans SOLUTION:
  - a) TSA of the Solution:  $= 2\pi r(h+r)$

 $= 2 X \frac{22}{7} X 7X 27$  = 44 X 27

 $= 1188 \text{cm}^2$  $= 1188 \times 250$ 

b) TSA of 250 cones  $= 2,97,0000 \text{ cm}^2$ 

 $1 \text{cm}^2$ = 0.05

 $2,97,000 \text{cm}^2$ = 297000 x 0.05

cost = ₹ 14850

	EXERCISE
	MULTIPLE CHOICE QUESTIONS
1	If surface area of a sphere is $676 \pi$ cm <sup>2</sup> find its radius.
	(a)12cm (b)13cm (c)5cm (d)17cm
2	Ibinu doesn't like the colour on the wooden ball he has. So he wants to scratch and remove the colour so that he
	can put the new one. How much area he has to scratch if diameter of ball is r cm.
	(a) $\pi r^2$ cm <sup>2</sup> (b) $2\pi r^2$ cm <sup>2</sup> (c) $4\pi r^2$ cm <sup>2</sup> (d) $8\pi r^2$ cm <sup>2</sup>
3	Anshul has a rectangular sheet of dimensions 14cm x 22cm. He wants to make a cylinder in such a way that
	volume is minimum. Find the height of the cylinder.
	(a)12cm (b)18cm (c)22cm (d)17cm
4	If the radius of right circular cone is halved and its height is doubled then the volume will be
5	(a)halved (b)doubled (c)trippled (d)unchanged
3	The largest sphere is carved out of a cube of side 7cm. Find the volume of the sphere.  (a)127.67cm <sup>3</sup> (b)133.82cm <sup>3</sup> (c)179.67cm <sup>3</sup> (d)117cm <sup>3</sup>
	(a)127.07cm (b)155.82cm (c)179.07cm (d)117cm
	ASSERTION – REASON BASED QUESTIONS
1	Assertion (A): The curved surface area of a right circular cylinder of radius r and height h is $2\pi rh$ .
1	Reason (R): The curved surface area of a cylinder is obtained by multiplying the circumference of the base with
	the height.
2	Assertion (A): The lateral surface area of a cone with radius r and slant height l is given by $\pi$ rl
	Reason (R): The lateral surface of a cone is a sector of a circle whose radius is equal to the slant height
3	Assertion (A): The total surface area of a hemisphere of radius r is $3\pi r^2$
	Reason (R): The total surface area of a hemisphere includes both the curved surface and the circular base.
4	Assertion (A): The volume of a sphere of radius r is given by $\frac{4}{3}\pi r^3$
	Reason (R): The volume of a sphere is derived using integral calculus from the formula for the surface area of a
	sphere.
5	Assertion (A): The curved surface area of a hemisphere of radius r is $2\pi r^2$
	Reason (R): The curved surface area of a hemisphere is half the total surface area of a sphere of the same radius.
	VERY SHORT SOLUTION: WERQUESTIONS (2 MARKS)
1	Find the surface area of a sphere with radius 7 cm.
2	A cylinder has a height of 10 cm and a radius of 4 cm. Find its total surface area.
3	Find the volume of a cone with radius 5 cm and height 12 cm.
4 5	The volume of a cylindrical rode is 628 cm <sup>3</sup> . If its height is 20cm, find the radius of its cross section The radii of two cylinders are in the ratio 2:3 and their heights are in the ratio 5:3. Find the ratio of their volumes.
5	SHORT ANSWER QUESTIONS(3 MARKS)
1	Anandi has a piece of canvas, whose area is 551 m <sup>2</sup> . She used to have a conical tent made with a base radius of 7m
1	Assuming that all the stitching margins and the wastage incurred while cutting amount to 1 sq meter. Find the
	slant height of conical tent.
2	A corn cob shaped somewhat like a cone, has the radius of its broadest end as 2.1cm and the length as 20cm. If
	each 1cm2 of the surface of the cob carries an average of four grains, find how many grains you would find on the
	entire cob
3	If the total surface area of sphere is 98.56 square centimeter, finds the radius of the sphere
4	The outer curved surface areas of hemisphere and sphere are in the ratio 2:9 find the ratio of their
	radii.
5	Into a conical tent of radius 8.4 m and vertical height 3.5 m how many full bags of wheat can be emptied if space
	for wheat in each bag is 1.96 cubic meter.
	CASE RASED OUESTIONS (4 MARK FACH)

At a Ramzan Mela, a stall keeper in one of the food stalls has a large cylindrical vessel of base radius 15 cm filled up with a height of 32cm with orange juice. The juice is filled in small cylindrical glasses of radius 3cm up to a height of 8cm, and sold for Rs.3 each. How much money does the stall keeper receive by selling the juice completely? A semi-circular sheet of metal of diameter 28cm is bent to form an open conical cup. Find the capacity of the cup. The volume of two spheres are in the ratio 64:27 Find their radii, if the sum of their radii are 21cm.

## LONG ANSWER TYPE QUESTIONS

- A tent is of the shape of a right circular cylinder upto a height of 3m and then becomes a right circular cone with maximum height of 13.5 meters above the ground. Calculate the cost of painting the inner side of the tent at the rate of Rs.20 per square meter if the radius of the base is 14 meters
- A bus stop is barricaded from the remaining part of the road by using 50 hollow cones made of recycled cardboard. Each cone has a base diameter of 40 cm and height 1m. If the outer side of each of the cone is to be painted and the cost of painting is Rs.12 per m<sup>2</sup>, what will be the cost of painting all these cones?
- a) A Jocker's cap is in the form of a right circular cone of base radius 7 cm and height 24cm. Find the area of the sheet required to make 10 such caps.
- A wall 6 m long 5 m high and 0.5 m thick is to be constructed with blocks, each having length 25cm, breath 12.5 cm and height 7.5 cm. Find the number of bricks required to construct the wall if it is given that cement and sand mixture occupy  $\frac{1}{20}$  of the volume of the wall.
- The barrel of a fountain pen cylindrical in shape, is 7cm long and 5mm in diameter. A full barrel of ink in the pen is used up on writing 330 words on an average. How many words would would use up a bottle of ink containing 1/5 of a litre?

### HOTS

- A semi circular sheet of metal of diameter 28cm is bent into an open conical cup. Find the depth and capacity of cup.
- The ratio of volumes of two cones are 4:5 and the ratio of radii of their bases are 2:3. Find the ratio of their vertical heights.
- A conical pit of top diameter 3.5 meter is 12 meter deep what is its capacity in Kiloliters?
- 4 A Sphere, a cylinder and a cone are of same radius and same height .Find the ratio of their curved surface areas.
- A wooden toy is in the form of a cone surmounted on a hemisphere. The diameter of the base of the cone is 16cm and its height is 15cm and find the cost of painting the toy at Rs.7 per 100 square centimeter.

### CHAPTER – 12 STATISTICS

#### MIND MAPPING

#### GIST/SUMMERY OF THE LESSON

**INTRODUCTION TO STATISTICS**: A study dealing with the collection, presentation and interpretation and analysis of data is called statistics.

#### DATA

- Facts/figures, numerical or otherwise, collected for a definite purpose are called data.
- Data collected first-hand data:- Primary
- Secondary data: Data collected from a source that already had data stored

FREQUENCY The number of times a particular instance occurs is called frequency in statistics.

**UNGROUPED DATA** Ungrouped data is data in its original or raw form. The observations are not classified into groups.

GROUPED DATA In grouped data, observations are organized in groups.

#### CLASS INTERVAL

- The size of the class into which a particular data is divided.
- Eg. divisions on a histogram or bar graph.
- Class width = upper class limit lower class limit. It is also called Range or height of the
- class.

#### REGULAR AND IRREGULAR CLASS INTERVAL

- Regular class interval: When the class intervals are equal or of the same sizes.
- Eg. 0-10, 10-20, 20-30..... 90-100
- Irregular class interval: When the class intervals are of varying sizes.
- **E**g. 0-35, 35-45, 45-55, 55- 80, 80-90, 90-95, 95-100

**FREQUENCY TABLE:** A frequency table or distribution shows the occurrence of a particular variable in a tabular form.

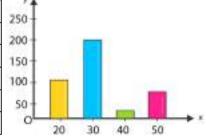

**SORTING:** Raw data needs to be sorted in order to carry out operations.- Sorting  $\Rightarrow$  ascending order or descending order

**UNGROUPED FREQUENCY TABLE:** When the frequency of each class interval is not arranged or organised in any manner.

**GROUPED FREQUENCY TABLE:** The frequencies of the corresponding class intervals are organised or arranged in a particular manner, either ascending or descending.

GRAPHICAL REPRESENTATION OF DATA / BAR GRAPHS: Graphical representation of data using bars of equal width and equal spacing between them (on one axis). The height of the bar represents the frequency of the data.

	· · · · · · · · · · · · · · · · · · ·
Savings (in %)	Number of Employees(Frequency)
20	105
30	199
40	29
50	73
TOTAL	400
	•

**VARIABLE BEING A NUMBER:** A variable can be a number such as 'no. of students' or 'no. of months'.

Can be represented by bar graphs or histograms depending on the type of data.

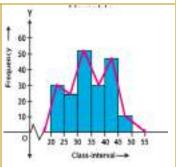

Discrete  $\rightarrow$  bar graphs

Continuous  $\rightarrow$  Histograms

### HISTOGRAMS

Like bar graphs, but for continuous class intervals.

Area of each rectangle is  $\propto$  Frequency of a variable and the width is equal to the class interval.

## FREQUENCY POLYGON

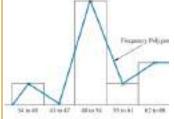

If the midpoints of each rectangle in a histogram are joined by line segments, the figure formed will be a frequency polygon.

Can be drawn without histogram. Need midpoints of class intervals.

Midpoint of class interval

The midpoint of the class interval is called a class mark

Class mark = (Upper limit + Lower limit)/2

## EOUALITY OF AREAS

The addition of two class intervals with zero frequency preceding the lowest class and succeeding the highest class intervals equates the area of the frequency polygon to that of the histogram(Using congruent triangles).

Measures of Central Tendency

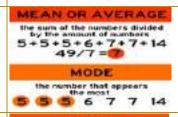

## AVERAGE

The average of a number of observations is the sum of the values of all the observations divided by the total number of observations.

#### MEAN

Mean of ungrouped data mean  $(\bar{x}) = \frac{\sum f_i x_i}{\sum f_i}$ 

### Mode

The most frequently occurring observation is called the mode.

The class interval with the highest frequency is the modal class

#### MEDIAN

Value of the middlemost observation.

If n(number of observations) is odd, Median =[(n+1)/2]th observation.

If n is even, the Median is the mean or average of (n/2)th and [(n+1)/2]th observation.

	ASSERTION AND REASONING QUESTIONS In questions a statement of Assertion(A) is followed by a statement of Reason (R). Choose the co. A). Both Assertion and Reason are correct and Reason is the correct explanation of Assertion. B). Both Assertion and Reason are correct but Reason is not the correct explanation of Assertion. C). Assertion is correct but Reason is incorrect. D). Assertion is incorrect but Reason is correct	
1	Assertion(A):If the mean of five observations $x$ , $x+2$ , $x+4$ , $x+6$ and $x+8$ is11, then mean of last three observations is 13. Reason(R): Mean of observations = Sum of all obsevations/Number of observations	Ans:A
2	Assrtion(A):The range of first 5 multiples of 2 is 6	Ans:D

	Reason( R):Range= maximum value - minimum value.						
3	Assertion (A):The median of the observations 3, 5, 12,10, 7, 11, 4,1, 3, 8 is 6. Reason(R):When the number of observations is odd, The median is the value of the $[n+1\ 2]$ th observation.	Ans:B					
4	Assertion(A): The mode of 4, 6, 7,5, 9, 3, 2, 7, 7, 6, 5, 4, 9, 7,4 is 7. Reason(R): The mode is that value of the given number of observations which divides it into exactly two parts.	Ans:C					
5	Assertion(A): Tally marks for 5 is <del>IIII</del> Reason(R): Tally marks for 15 is <del>IIII IIII</del> As15 = 5+5+5	Ans:B					
6	Assertion(A): In bar graph frequency is taken only along y-axis.  Reason(R): In bar graph frequency can be taken only along any axis.	Ans:C					
7	Assertion(A):In a histogram the area of each rectangle is proportional to the class size of corresponding interval.  Reason(R): To draw the histogram of a continuous frequency distribution with unequal class interval the frequencies of classes are adjusted by using the formula Adjusted frequency of a class (Minimum class size/class size) × frequency of the class	Ans:D					
8	Assertion(A): Frequency polygon cannot be drawn for discontinuous data.  Reason (R): Frequency polygon can be drawn for discontinuous data also by changing it into continuous data.	Ans:D					
9	Assertion(A): Class mark for 20-30 is 25. Reason(R):Class mark of an interval is given by mean of upper limit and lower limit.						
10	Assertion(A): The difference between the maximum and minimum values of a variable is called its range.  Reason(R):: The number of times a variate (observation) occurs in a given data is called range.	Ans:C					
1	VERY SHORT ANSWER TYPE QUESTIONS(2 MARKS QUESTIONS)  Find the true class limits of the first two classes of the distribution 1-9, 10-19,20-29  Given Class Intervals 1-9   10-19   20-29						
	ANS: True class intervals 0.5-9.5 9.5-19.5 19.5-29.5						
2	The following are the marks obtained by 20 students in a class test.  40, 20, 36, 27, 30, 12, 15, 20, 25, 31, 34, 36, 39, 41, 43, 48, 46, 36, 37, 40  Arrange the above data in frequency distribution with equal classes, one of them being 0-10.  Class Interval 0-10 10-20 20-30 30-40 40-50  Frequency 0 2 4 8 6						
3	In a bar graph, the height of a bar is 5 cm and it represents 40 units. What is the height of the bar runits.  ANS: Scale: 1 cm = 8 units, 7 cm=56 Units	epresenting 56					
4	A bar graph is drawn to the scale of 1 cm = k units, if the length of a bar representing a quantity of cm, then find the value of 'k'.  ANS: $k = \frac{702}{3.6} = 195$	702 units is 3.6					
5	Write the class marks of the given following for the following frequency distribution table.  Class Interval 0-20 20-40 40-60 60-80 80-100						
	Class Interval 0-20 20-40 40-60 60-80 80-100 Frequency 10 15 20 17 12						

Ans: Class Mark 10

Frequency

Write about Histograms-Graphical representation of data.

ANS: Histogram or frequency histogram is program is a graphical representation of a frequency distribution in the form of rectangles with class intervals as basis and heights proportional to corresponding frequences such that there is no gap between any two successive rectangles. What are differences between Bar graph and Histogram.

Define class-marks of a frequency distribution of data.

SOLUTION: The class mark (also called the midpoint) of a class interval in a frequency distribution is the average

Classmark = 
$$\frac{Lower \lim t + upper \lim it}{2}$$

of the lower limit and upper limit of that class.

What is a kink? When it is required to represent data graphically.

ANS: Kink is a break on X-Axis or Y-Axis, where the class interval is not started from 0 in a frequency distribution.

Write any four real life situations where we use graphical methods to represent data.

**SOLUTION:** Any related real life situations.

## SHORT ANSWER TYPE QUESTIONS(3 MARKS QUESTIONS)

Modify the given frequency distribution table into continuous class intervals data.

Class Interval	21-30	31-40	41-50	51-6	61-70	71-80				
Frequency	6	9	13	14	8	7				
Class Interval		21-30	31-40	41-50	51-60	61-70	71-80			
	Frequency			6	9	13	14	8	7	
COLUMNON.	Contin	uous Cl	ass inte	rvals	20.5-30.5	30.5-40.	5 40.5-50.5	50.5-60.5	60.5-70.5	70.5-80.5

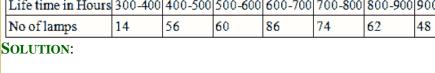

A family with a monthly income of Rs 15,000 had planned the following expenditures per month under various heads: Draw a bar graph for the data above.

	Marks	Grocery	Rent	Education of children	Entertainment	Medicine	Fuel	Misc
- 1	Expenditure in Thousand rupees	4	5	5	1	2	2	1

SOLUTION: Bar –graph 🗀

The following table give the life times of 400 neon lamps. Represent the graph information with the help of histogram

1	monnation with	the help	or mstogram.					
	Life time in Hours	300-400	400-500	500-600	600-700	700-800	800-900	900-1000
	No of lamps	14	56	60	86	74	62	48

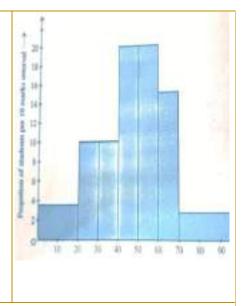

A teacher wanted to analyse the performance of two sections of students in a mathematics test of 100 marks. Find the length of each rectangle of concerned class interval if the same data represents in a histogram.

Marks	0-20	20-30	30-40	40-50	50-60	60-70	70-100
Frequency	7	10	10	20	20	15	8

<u> </u>										J
	Class Interval	Freque	ncy	Wi	dth	Len	gth of th	ie rectar	ıgle (Heig	pht)
	0-20	7		20		7/2	20 = 0.32	5x10=3.	.5	
	20-30	10		10		10/	10 = 1.0	0x10=1	0	
	30-40	10		10		10/	10 = 1.0	0x10=1	0	
	40-50	20		10		20/	10 = 2.0	0x10=2	0	
	50–60	20		10		20/	10 = 2.0	0x10=2	0	
	60-70	15		10		15/	10 = 1.	5x10=1	5	
	70-100	8		30		8/3	30≈0.2′	7 <b>x10=</b> 2.	.7	

5 Give any three methods to represent a particular data graphically.

**SOLUTION**: Here are three common methods to represent data graphically:

## Bar Graph

Ans:

Used to compare quantities across different categories.

Each category is represented by a bar, and the length or height of the bar corresponds to the data value.

### Pie Chart

Used to show proportions or percentages of a whole.

The circle is divided into sectors, each representing a category's contribution to the total.

## Line Graph

Useful for showing trends over time.

Data points are plotted and connected with lines, making it easy to see increases or decreases.

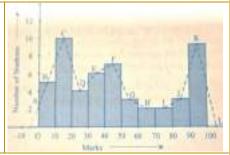

- 6 The value of  $\pi$  up to 50 decimal places is given below:
  - 3.14159265358979323846264338327950288419716939937510
  - (i) Make a frequency distribution of the digits from 0 to 9 after the decimal point.
  - (ii) What are the most and the least frequently occurring digits?

Digit	0	1	2	3	4	5	6	7	8	9
No of	2	-	_		4	5	4	А	_	0
times	-	,	2	a	"	,	*	*	3	8

#### ANS: L

- (i) [Frequency distribution to be created based on the digits.]
- (ii) Digit 3 and 9 occurred 8 times.
- 7 Consider the marks (out of 100) obtained by 51 students of a class in a test, given in the below table. Draw a frequency polygon corresponding to this frequency distribution table.

Cost of living index	140-150	150-160	160-170	170-180	180-190	190-200	Total
Number of week	5	10	20	9	6	2	52

In a city, the weekly observations made in a study on the cost of living index are given below in the following table: Draw a frequency polygon for the data above (without constructing a histogram).

Classes	Class Marks	Frequency
140-150	145	5
150-160	155	10
160-170	165	20
170-180	175	9
180-190	185	6
190-200	195	2

ANS:

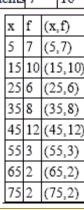

The following observations have been arranged in ascending order as: 29, 32, 48, 50, x, x + 2, 72, 78, 84, 95; If the median of the data is 63, find the value of x.

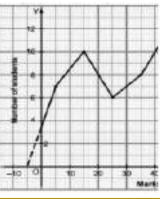

**SOLUTION**: The data is already in ascending order; since the number of terms is 10 (even), the median is the average of the 5th and 6th terms:  $\Rightarrow$  Median =  $(x + x + 2)/2 = 63 \Rightarrow (2x + 2)/2 = 63 \Rightarrow x + 1 = 63 \Rightarrow x = 62$ 

## LONG ANSWER TYPE QUESTIONS (5 MARKS QUESTIONS)

1 Draw a frequency polygon for the following distribution.

Marks	0-10	10-20	2030	30-40	40-50	50-60	60-70	70-80
No. of Students	7	10	6	8	12	3	2	2

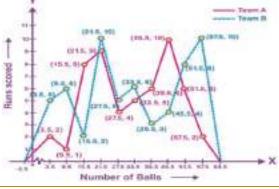

SOLUTION

The runs scored by two teams A and B on the first 60 balls in a cricket match are given below: Represent the data of both the teams on the same graph by frequency polygons; Solution: Plot the class intervals (like 0–10, 10–20, etc.) on the x-axis and frequencies for both teams on the y-axis; mark the midpoints of each class and join them with lines for both teams to form two frequency polygons on the same graph.

1.5											
	Number of balls	01-06	07-12	13-18	19-24	25-30	31-36	37-42	43-48	49-54	55-60
	Team A	2	1	8	9	4	5	6	10	6	2
	Team B	5	6	2	10	5	6	3	4	8	10

D
am B
)
)

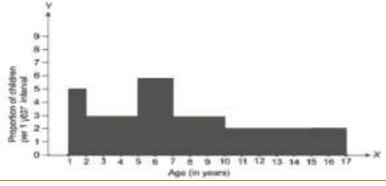

SOLUTION: L

A random survey of the number of children of various age groups playing in a park was found as follows: Draw a histogram to represent the data above; Solution: Draw the age groups on the x-axis and number of children on the y-axis; use continuous bars without gaps for each age group with height proportional to frequency.

Age(in years)	1-2	2-3	3-5	5-7	7-10	10-15	15-17
Number of children	5	3	6	12	9	10	4

#### **SOLUTION:**

Age (in Years)	Number of	Width of the	Length of the
	children(frequency)	class	class
1-2	5	1	(5/1)x1=5
2-3	3	1	(3/1)x1=3
3-5	6	2	(6/2)x1=3
5-7	12	2	(12/2)x1=6
7-10	9	3	(9/3)x1=3
10-15	10	5	(10/5)x1=2
15-17	4	2	(4/2)x1=2

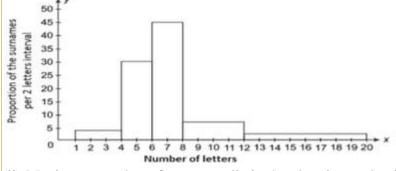

Hundred surnames were randomly picked up from a local telephone directory and a frequency distribution of the number of letters in the English alphabet in the surnames was found as follows.

No. of letters	Number of surnames
1-4	6
4-6	30
6-8	44
8-12	16
12-20	4

- i)Draw a histogram to depict the given information.
- ii)Write the class interval in which the maximum number of surnames lie.

Number of letter	Number of surnames	Width of class	Length of rectangle
1-4	6	3	(6/3)x2=4
4-6	30	2	(30/2)x2=30
6-8	44	2	(44/2)x2=44
8-12	16	4	(16/4)x2=8
12-20	4	8	(4/8)x2=1

SOLUTION: (i)

- (ii) Maximum number of surnames lie in the class interval 6-8.
- 5 In a Mathematics test given to 15 students, the following marks (out of 100) are recorded.

41, 39, 48, 52, 46, 62, 54, 40, 96, 52, 98, 40, 42, 52, 60

Find the mean, median and mode of this data.

**SOLUTION**: Mean=Average = Sum of all the observations/Total number of observations

= (41+39+48+52+46+62+54+40+96+52+98+40+42+52+60)/15

= 822/15

= 54.8

Median

To find the median, we first arrange the data in ascending order.

39, 40, 40, 41, 42, 46, 48, 52, 52, 52, 54, 60, 62, 96, 98

Here,

Number of observations (n) = 15

Since the number of observations is odd, the median can be calculated as

Median = [(n+1)/2]th observation

= [(15+1)/2]th observation

= (16/2)th observation

= 8th observation

= 52

Mode

To find the mode, we first arrange the data in ascending order.

39, 40, 40, 41, 42, 46, 48, 52, 52, 52, 54, 60, 62, 96, 98

Here,

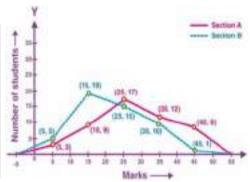

We find that 52 occurs most frequently (3 times)

 $\therefore$  Mode = 52

### CASE BASED QUESTIONS

The following table gives the distribution of students in two sections according to the marks obtained by them. The marks of the students of both sections were represented on the same graph by two frequency polygons. Observe the two polygons and answer the questions.

Section-A		Section-B				
Marks	Frequency	Marks	Frequency			
0-10	3	0-10	5			
10-20	9	10-20	19			
20-30	17	20-30	15			
30-40	12	30-40	10			
40-50	9	40-50	1			

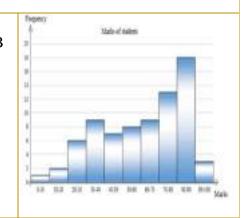

- (i) For the class mark 25 which section performed well?
- (ii) For which class marks section B performed better than section A?
- (iii) For which class marks section A performed better than section B?
- (iv) Which section performed better overall?

SOLUTIONS: i)Section-A ii)15 iii)25 iv) Section-A

- Bhaskar is a Mathematics teacher in Hyderabad. After Periodic test 1, he asks students to collect the mathematics marks of all the students of Class IX- A, B and C. He prepares the frequency distribution table using the collected marks and draws Histogram using the table as shown in figure.
  - i)What is the width of the class?
  - (ii) What is the total number of students in the Histogram?
  - (iii)How many students scored less than 50% marks?
  - (iv)What is the range of the collected marks?

**SOLUTIONS**:i)10 ; ii)76 ; iii)25 ; iv)100

A group of students decided to make a project. They are collecting the heights (in cm) of their 50 girls of Class IX-A, B and C of their school. After collecting the data, they arranged the data in the following frequency distribution table form

Height in cm	135-140	140-145	145-150	150-155	155-160	160-165
Number of students	5	6	17	11	7	4

Based on the information, answer the following questions.

- (i) Write the lower limit of the class with highest frequency.
- (ii) How many students of the height 150 cm below are there?
- (iii) How many students of the height 145 cm and above?
- (iv) Write the class mark of the class with lowest frequency.

SOLUTIONS:i)145 ii)28 iii)39

### HOTS

Ten Observations 6, 14, 15, 17, x+1, 2x-13, 30, 32, 34, 43 are written in ascending order. The median of the data is 24. Find the value of the x.

iv)162.5

SOLUTION: Given, ten observations are written in an ascending order.

The observations are 6, 14, 15, 17, x + 1, 2x - 13, 30, 32, 34, 43

The median of the data is 24

We have to find the value of x.

Total number of observations, n = 10

Here. n is even

The formula for median when n is even is given by

Median = [(n/2)th observation + ((n/2) + 1)th observation] / 2

So, median = [(10/2)th observation + ((10/2) + 1)th observation] / 2

24 = [5th observation + (5 + 1)th observation] / 2

24 = [5th observation + 6th observation] / 2

24 = [(x + 1) + (2x - 13)]/2

48 = x + 2x + 1 - 13

48 = 3x - 12

3x = 48 + 12

3x = 60

x = 60/3

x = 20

Therefore, the value of x is 20.

The mean of 13 observations is 14. If the mean of the first 7 observations is 12 and that of last 7

Observations is 16 find the 7th observation?

**SOLUTION:** Total sum of 13 observations = $14 \times 13 = 182$ 

Sum of 14 observation = $7 \times 12 + 7 \times 16 = 84 \times 112 = 196$ 

So, the 7th observation =196-182=14

School has two sections the mean mark of one section of size 40 is 60 and mean mark of other section of size 60 is 80. Find the combined mean of all the students of the school.

$$(40X60) + (60X80)$$
  $7200$ 

**SOLUTION:** Combined Mean=

40 + 60= 100 = 72

The mean weight of 180 students in a school is 50 kg the mean weight of boys is 60 kg while that of the girls is 45 kg. Find the number of the boys and girls in the school.

**SOLUTION**: We are given:

Total number of students = 180

Mean weight of all students = 50 kg

Mean weight of boys = 60 kg

Mean weight of girls = 45 kg

Let:

Number of boys = x

Number of girls = 180-x

We'll use the formula for the combined mean:

Combined Mean

Substitute the given combined mean (50 kg):50

 $=> 50 = 180 \times 50 = 15 \times +8100 => 900 = 15 \times => \times = 60$ 

No. of boys are 60 and girls are 120

### **EXERCISE**

#### MULTIPLE CHOICE QUESTIONS

- A grouped frequency distribution table with class intervals of equal sizes using 250–270 as one of the class intervals is constructed for the following data: 268, 220, 368, 258, 242, 310, 272, 342, 310, 290, 300, 320, 319, 304, 402, 318, 406, 292, 354, 278, 210, 240, 330, 316, 406, 215, 258, 236; The frequency of the class 310–330 is: (a) 4 (b) 5 (c) 6 (d) 7
- 2 If each observation of the data is increased by 5 then their mean:
  - (a) remains the same (b) becomes 5 times the original mean (c) is decreased by 5 (d) is increased by 5
- The median of the data 78, 56, 22, 34, 45, 54, 39, 68, 54, 84 is:
  - (a) 45 (b) 49.5 (c) 54 (d) 56
- 4 What is the class mark of the class interval 90–120?
  - (A) 90 (B) 105 (C) 115 (D) 120
- In a Histogram, if the first-class interval is not starting from zero, we show it on the graph by (A) marking a kink or break on the axis (B) drawing from Zero on the axis
  - (C) neglecting from zero to starting value (D) considering frequency as zero till starting value

## ASSERTION AND REASONING QUESTIONS

- Assertion(A): According to statistics more female children are born each year than male children in India. Reason(R):In India the death rate of male child is higher than female child.
- 2 Assertion(A): Range = Maximum value Minimum value

Reason( R):: The range of the first 6 multiples of 6 is 9.

- Assertion(A): The class intervals 10-20, 20-30, 20 is included in interval 20-30 Reason(R): The lower limit of the class interval is included in the interval.
- Assertion(A): The class size for the grouped frequency distribution of the class intervals 0-20 is 20 Reason(R): Class size is given by mean of upper limit and lower limit.
- Assertion(A): In a bar graph, the height of the bar is proportionate to the value of the component. Reason(R): The class mark of 20-30 is 25.

### VERY SHORT ANSWER TYPE QUESTIONS

- The following number of goals were scored by a team in a series of 10 matches:
  - 2, 3, 4, 5, 0, 1, 3, 3, 4, 3. Find the mean, median and mode of these scores.
- In a bar graph, the height of a bar is 5 cm and it represents 40 units. What is the height of the bar representing 56 units.
- Find the mode of 14, 25, 14, 28, 18, 17, 18, 14, 23, 22, 14, 18. A grouped frequency distribution table with class intervals of equal sizes using 250–270 as one of the class intervals is constructed for the following data: 268, 220, 368, 258, 242, 310, 272, 342, 310, 290, 300, 320, 319, 304, 402, 318, 406, 292, 354, 278, 210, 240, 330, 316, 406, 215, 258, 236; Find the frequency of the class 310–330.
- The median of 12, 13, 16, x+2, x+4, 28, 30, 32 is 23. When x+2 and x+4 lie between 16 and 30, find the value of x

# SHORT ANSWER TYPE QUESTIONS

- 1 Give five examples of data that you can collect from your day-to-day life.
- A random survey of the number of children of various age groups playing in a park was found as follows: Draw a histogram to represent the data above.

motogram to re	present the data door
Age(inyears)	Numberofchildren
1-2	5
2-3	3
3 –5	6
5 –7	12
7 –10	9
10-15	10
-17	4

- In a mathematics test given to 15 students, the following marks (out of 100) are recorded: 41, 39, 48, 52, 46, 62, 54, 40, 96, 52, 98, 40, 42, 52, 60; Find the mean, median and mode of this data.
- Three coins were tossed 30 times simultaneously. Each time the number of heads occurring was noted down as follows: 0, 1, 2, 2, 1, 2, 3, 1, 3, 0, 1, 3, 1, 1, 2, 2, 0, 1, 2, 1, 3, 0, 0, 1, 1, 2, 3, 2, 2, 0; Prepare a frequency distribution table for the data given above.
- Given below are the seats won by different political parties in the polling outcome of a state assembly election:

Political Party					
Seats Won	75	55	37	29	37

- (i) Draw a bar graph to represent the polling results.
- (ii) Which political party won the maximum number of seats?

## LONG ANSWER TYPE QUESTIONS

For the following data, draw a histogram and a frequency polygon.

- 1									
	X	0 –10	10 - 20	20 - 30	30 - 50	50 - 60	60 - 80	80 - 90	90-100
	F	5	12	15	20	18	10	6	4

2 Following are the marks of a group of students in a test of reading ability test:

Construct a histogram and frequency polygon for the above data.

				2 1 2 2				
Marks:	50 – 52	47 – 49	44 – 46	41 – 43	38-40	35 – 37	32-34	Total
No. ofstudents	4	10	15	18	20	12	13	92

The runs scored by two teams A and B on the first 60 balls in a cricket match are given below:

Represent the data of both the teams on the same graph by frequency polygons.

ŀ	represent the d	iata Oi	both	the te	airis	ii tiic	Same	graph	by III	equen	cy po
	Number of balls	01-06	07-12	13-18	19-24	25-30	31-36	37-42	43-48	49-54	55-60
	Team-A	2	1	8	9	4	5	6	10	6	2
	Team-B	5	6	2	10	5	6	3	4	8	10

In a city, the weekly observations made in a study on the cost-of-living index are given below in the following table: Draw a frequency polygon for the data above (without constructing a histogram).

Cost of living index	Number of weeks
140-150	5
150-160	10
160-170	20
170-180	9
180-190	6
190-200	2
Total	52

100 surnames were randomly picked up from a local telephone directory and frequency distributions of the number of letters in the English alphabet in the surnames was found as follows: Draw a histogram to depict the given information. Write the class interval in which the maximum number of surnames lie.

Numberofletters	Numberofsurnames
1-4	6
4 –6	30
6 –8	44
8-12	16
12-20	4

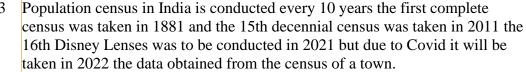

## CASE BASED QUESTIONS

- State government is planning to improve the facilities in governmentmaintained parks. A random survey is done on the number of children belonging to different age groups who play in government parks and the information is given in the form of a histogram given below.
  - i)How many children of age group 9-11 are playing in the government parks? ii) Which age group has the least frequency?
  - (iii) Which age group children has highest frequency?

  - (iv)How many children of age less than 4 years go to government parks?
- The Class teacher of Class X preparing result analysis of a student. She compares the marks of a student
  - obtained (out of 100) in Class IX (2018-19) and Class X (2019-20) using the double bar graph as shown below;

Read the above graph and answer the questions.

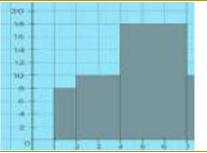

- (i)In which subject was the performance at par?
- (ii) What was the difference of marks in Maths Subject?
- iii)In which subject the performance of 2018-19 was better than that of 2019 -20?
- (iv)In which subject has the performance deteriorated?

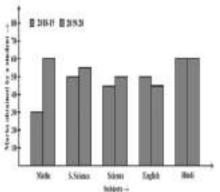

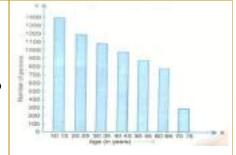

- i)What is the total number of persons living in the town in the age groups 10 to 15 and 60 to 65?
- ii)How many persons are more in the age group 10 to 15 than in the age group
- iii) What is the total population of the town?
- iv) What is the number of persons in the age group 60 to 65?

- In a school 90 boys and 30 girls appeared in a public examination The mean marks of boys was found to be 45% where as the main marks of girls was 70% determine the average marks percentage of the school.
- The median of the following observations arranged in ascending order 8, 9, 12, 18, x + 2, x + 4, 30 31, 34, 39 is 24.Find x.
- The mean of 25 observations is 36. If the mean of the first 13 observations is 32 and that of the last 13 observations is 39, find the 13th observation.
  - Find the median of the data, 33, 31, 48, 45, 41, 92, 78, 51 and 61, if 92 is replaced by 29. What will be the new median?
- The mean of 8 numbers is 15 if each number is multiplied by 2 what will be the new mean?

## ANSWERS MULTIPLE CHOICE QUESTIONS 1.C 2.D 3.C 4.B ASSERTION AND REASONING OUESTIONS 1.C 2.C 3.A 4.C 5.B VERY SHORT ANSWERQUESTIONS 1.Mean=2.8 Median =3 and Mode=3 2. 7 cm=56 Units 3.14 4.6 5.x = 20SHORT ANSWER QUESTIONS 1. Five examples from day-to-day life: Number of students in our class. Number of fans in our school. Electricity bills of our house for last two years. Election results obtained from television or newspapers. Literacy rate figures obtained from Educational Surv 2.Draw Histogram 3.Mean=15,Median=52, Mode=52 4. Draw frequency distribution table 5.i)Draw Bar graph ii)Party-A LONG ANSWER QUESTIONS 1.Draw Histogram and Frequency polygon 2.Draw Histogram and Frequency polygon 3.Draw Frequency polygon 4.Draw Frequency polygon 5.i) Draw Histogram ii) Class interval 6-8 CASE BASED QUESTIONS 1)i) 12 ii) 11-15 iii)4-7 iv)18 ii) 30 iii)English 2)i) Hindi iv)English 3)i) 2200 ii) 300 iii)6700 iv)800 HOTS 1.51.25% 2.24 3.23 4.45 5.30
